

My name is [REDACTED] I was a resident of Wollor  
I lived in a small log cabin in Slate Civilly rd Wollor I lived  
there for approx 3 years, in these years I brought my racing  
pigeons to this land in doing so many native birds ventured  
in and around the cages this is where myself and Fran Maher  
who also lived on this road witnessed the sitting of the  
Wompoo Pigeon as it came and feeded around my cages. yes we  
were very surprised. And yes bringing my pigeons to the bush  
also showed some farmers, after spreading their manure to the  
ground it made many grasses appear where ever I threw their  
manure and they had never seen so much growth and grasses  
they have never seen in their lives they were surprised. So yes  
the land with the right management can produce food for all  
and yes it has been 5 years since I have been there and yes  
the grasses and even clover are still living and growing in that  
patch of land. This is why I am writing this letter I have abt  
to give to the land that is why I myself and my family's farm  
was bollyed to sell our farm, and yes there are more alternatives  
to coal mining that's why it would be a great shame to see  
the mine going any further, I would if I had the money to buy  
the whole valley and the history of Wollor and go back their

Thank you [REDACTED]
