

Committee,

I address you today in regard for my support of the Rye Park Wind Farm.

I will say from the outset of my support for this project that this farm is a "no brainer"

1 I am a proposed turbine host, I live midway in the north-south axis of the proposed wind farm

2. I support the implementation of the installation of all 109 proposed turbines.

Why 1, because hosting the turbine allows me an additional income stream which enables me return to government some of the aged pension I currently enjoy.

Why 2. Because (A). the full number of turbines generate more electricity into the National grid.

(B). the spinoff of income to the hosts is increased as well as the community fund which is turbine number reliant \$-wise as the Rye Park Village fund is increased benefiting all of us. I see the environmental benefits to us all by reducing the CO2 level increases upon this, our lifeboat in our journey through life.

Finally, I like to think that by being involved in the Rye Park Wind Farm I am actually able to make a difference to all of this world's occupiers. That one person, little old me, can have an effect.

That alone makes supporting 109 turbines well worth while & I repeat. "The 109 turbine farm IS a no brainer".

Thank you

Jim Thompson,
