Attention: Mr Jeremy Hung

Dear Jeremy,

# RE: DA 6/2018 82-90 CHRISTIE ST, 84A CHRISTIE ST, 71-79 LITHGOW ST, 546-564 PACIFIC HWY ST LEONARDS – TRAFFIC AND PARKING ASSESSMENT ADDENDUM REPORT

As requested, please herein The Transport Planning Partnership (TTPP) traffic and parking assessment for the above proposed development.

### Background

In January 2018, a development application (DA 6/2018) was lodged with Lane Cove Council relating to a proposed mixed use development at the above site. The proposed development is located on land known as Site A and Site B. Site A is on land which is essentially bounded by Christie Lane to the north, Christie Street to the east, the extension of Marshall Avenue across the railway line to Christie Street to the south and Lithgow Street to the west. Site B is on land fronting Pacific Highway between Christie Street and Lithgow Street.

The application sought approval to demolish all existing buildings on the site and construct in their place three new buildings comprising:

- 654 residential apartments with the following mix:
  - 2 x studio apartments
  - 197 x 1-bedroom apartments
  - 395 x 2-bedroom apartments
  - 56 x 3-bedroom apartments
  - 4 x 4-bedroom apartments
- retail uses

- supermarket retail 3,976m<sup>2</sup> gross floor area (or 3,578m<sup>2</sup> net leasable area)
- specialty retail 6,388m<sup>2</sup> gross floor area (or 5,750m<sup>2</sup> net leasable area)
- commercial uses 19,297m<sup>2</sup> gross floor area, and
- communal uses 1,000m<sup>2</sup> gross floor area.

The proposed development also includes a total of 1,138 car parking spaces comprising the following allocations:

- residents 542 car parking spaces
- residential visitors included into the proposed Site A retail car park provision (see below)
- Site A retail uses 316 car parking spaces (see below)
- Site B retail uses 87 car parking spaces, and
- commercial use 193 car parking spaces.

It is noted that there is an existing VPA that requires a total of 316 car parking spaces to be dedicated to Council to satisfy parking demand generated by the residential visitors and retail customers in Site A.

During the DA assessment stage, consultations with various utility service providers revealed there are underground services that requires the design of the development in particular the proposed driveway and the basement car park to be modified around the underground services. The underground services will result in a loss of approximately 70 car parking spaces.

Amended architectural plans have been prepared to reflect the required changes to basement car park and driveway arrangement. TTPP has undertaken a review of the revised architectural plans and as well as an assessment of the parking requirements for the proposed development. The findings are documented in this letter.

In addition, subsequent to the lodgement of the development application Council has commented on the proposed driveway treatment as proposed in the original DA documentation. This letter also provides responses to those comments.

## Proposed Modifications to the Original DA Scheme

The original proposed development yield is presented in Table 1.

| Proposed        | Land Use                | Site A                     | Site B                     | Total                      |
|-----------------|-------------------------|----------------------------|----------------------------|----------------------------|
|                 | Studio                  | 2                          | -                          | 2                          |
|                 | 1-bed                   | 197                        | -                          | 197                        |
| Desidential use | 2-bed                   | 395                        | -                          | 395                        |
| Residential use | 3-bed                   | 56                         | -                          | 56                         |
|                 | 4-bed                   | 4                          | -                          | 4                          |
|                 | Total                   | 654                        | -                          | 654                        |
|                 | Retail –<br>supermarket | 2,816m² GFA<br>2,534m² NLA | 1,160m² GFA<br>1,044m² NLA | 3,976m² GFA<br>3,578m² NLA |
| Non-residential | Retail –<br>specialty   | 3,644m² GFA<br>3,280m² NLA | 2,744m² GFA<br>2,470m² NLA | 6,388m² GFA<br>5,750m² NLA |
| use             | Commercial              | -                          | 19,297m <sup>2</sup> GFA   | 5,214m² GFA                |
|                 | Communal                | 1,000m² GFA                | -                          | 1,000m² GFA                |

Table 1: Original DA Proposed Development Yield

Subsequent to the submission of the development application, previously unknown underground services require the design of the access driveway and basement car parking to be modified to accommodate the underground services. The revised scheme is shown in Table 2.

| Proposed        | Land Use                | Site A                     | Site B                     | Total                      |
|-----------------|-------------------------|----------------------------|----------------------------|----------------------------|
|                 | Studio                  | 2                          | -                          | 2                          |
|                 | 1-bed                   | 197                        | -                          | 197                        |
| Residential use | 2-bed                   | 395                        | -                          | 395                        |
| Residential use | 3-bed                   | 56                         | -                          | 56                         |
|                 | 4-bed                   | 4                          | -                          | 4                          |
|                 | Total                   | 654                        | -                          | 654                        |
|                 | Retail –<br>supermarket | 2,972m² GFA<br>2,675m² NLA | 1,211m² GFA<br>1,090m² NLA | 4,183m² GFA<br>3,765m² NLA |
| Non-residential | Retail –<br>specialty   | 3,361m² GFA<br>3,025m² NLA | 2,913m² GFA<br>2,622m² NLA | 6,274m² GFA<br>5,647m² NLA |
| use             | Commercial              | -                          | 19,322m <sup>2</sup> GFA   | 19,322m² GFA               |
|                 | Communal                | 1,000m² GFA                | -                          | 1,000m² GFA                |

Table 2: Revised Proposed Development Yield

The proposed parking provision has been revised to 1,073 car parking spaces comprising:

• residents – 542 car parking spaces (no change)

- residential visitors included into the proposed Site A retail car park provision (see below) (no change)
- Site A retail uses 316 car parking spaces (see below) (no change)
- Site B retail uses 90 car parking spaces, and
- commercial use 125 car parking spaces.

# Traffic Assessment

Given that the revised development includes similar development yields to that submitted in the original development application, the revised proposed development will continue to generate development traffic at a similar level to that estimated in the DA traffic report. The nearby intersections would continue to operate satisfactorily.

Separately, Roads and Maritime Services has requested for the submitted SIDRA modelling to be amended to include additional intersections. These have been completed with the results presented in Table 3, Table 4 and Table 5.

|                             |                         | Morning Peak            |                     | Evening Peak            |                         |                     |

| Oxley St-Albany St          | 0.47                    | 10                      | А                   | 0.47                    | 11                      | А                   |
| Oxley St-Nicholson<br>St    | 0.33                    | 6                       | А                   | 0.21                    | 7                       | A                   |
| Oxley St-Lithgow St         | 0.13                    | 5                       | А                   | 0.17                    | 5                       | А                   |
| Nicholson St-Christie<br>St | 0.13                    | 7                       | А                   | 0.19                    | 7                       | А                   |

The modelling results indicate that in the future following the completion of the proposed development, the assessed intersections would continue to operate satisfactorily with similar performance and level of service as that found under existing conditions.

## Parking Assessment

A car parking assessment for the revised proposed development against the requirements stipulated in Table 2 of Part R – Traffic, Transport and Planning of the Lane Cove Development Control Plan (2013) (DCP) has been undertaken. This is presented in Table 6. Table 6 also includes the proposed car parking provision for each use.

| Land                          | l Use        | Units/Floor<br>Area | DCP Rate                      | DCP Requirements | Parking<br>Provision |
|-------------------------------|--------------|---------------------|-------------------------------|------------------|----------------------|
|                               | Studio       | 2                   | 0.5 per unit                  | 1                |                      |

#### Table 6: DCP Car Parking Requirements

\*The revised VPA requires a total of 316 car parking spaces to be dedicated to Council to satisfy parking demand generated by the residential visitors and retail customers in Site A.

The above assessment indicates that the required parking for the revised proposed development is 1,147 car parking spaces. This includes 131 residential visitor car parking spaces as well as 193 car parking spaces for the commercial use.

It is noted that the subject site is located within a short stroll of existing public transport nodes, namely St Leonards Railway Station and bus stops along the Pacific Highway. St Leonards Railway Station provides high frequency train services to numerous suburbs around Sydney metropolitan area and inter-city regional areas. Nearby bus stops provide bus services

connecting to other destinations such as Botany, West Pennant Hills, Ryde, McMahons Point, Bondi Junction, Manly as well as Sydney CBD. As such, the site is well placed to be leveraged off existing public transport services as well as its excellent access to services and amenities within the St Leonards Town Centre.

Recognising the location of the subject site being in close proximity to existing public transport nodes and services and amenities around St Leonards, it is recommended that car parking provisions for residential visitors and commercial tenants varied from those stipulated in the DCP.

In relation to reducing parking provision for residential visitor, it is noted a parking utilisation survey of the visitor car park at the East Quarter residential development indicates that visitor parking demand at residential developments peaked at around one car parking space per 10 apartments as demonstrated in Figure 1.

# Figure 1: Residential Visitor Car Park Parking Survey Results

Source: GTA Consultants (Ref: East Quarter Stage 3 Proposed Mixed Use Development 93 Forest Road, Hurstville Traffic and Parking Impact dated 8 December 2015). The East Quarter development has a total of 168 residential apartments. The above parking demand translates to a visitor parking demand rate of approximately one space per 10 apartments.

It is noted that the East Quarter site is located within close proximity to railway stations on a major suburban railway line with direct train services to Sydney CBD, as well as a major transport interchange at Hurstville Railway Station with bus services to major centres around Sydney metropolitan area, and also within walking distances to Hurstville CBD. The subject site at St Leonards has very similar transport access characteristics and CBD environment. As such, based on this data there is merit to reduce parking provision for residential visitors at the subject site.

On this basis, the proposed 654 residential apartments would be required to provide approximately 65 residential visitor car parking spaces compares to 131 car parking spaces required by the DCP. Adopting this requirement for visitor parking therefore the total parking required for Site A residential visitors and retail customers will be 286 car parking spaces which will be adequately covered by the proposed 316 public car parking spaces agreed in the VPA.

In relation to the proposed car parking provision for the commercial use, given that the subject site is located within walking distances to existing public transports and nearby CBD amenities and services, there are also merits to reduce parking for the proposed commercial use. In this regard, parking requirements for commercial developments located in similar CBD locations have been reviewed. This is presented in Table 7.

| Locations  | Parking Requirements                                 |
|--|--|
| Subject Site (Lane Cove LGA)   | 1 space per 100m <sup>2</sup>                        |
| Milsons Point, St Leonards CBD B4 Mixed Use Zone<br>(North Sydney LGA) | 1 space per 400m <sup>2</sup> (Maximum Parking Rate) |
| Chatswood CBD B3 Zone (Willoughby LGA)                                 | 1 space per 200m <sup>2</sup>                        |

# Table 7: Commercial Parking Requirements for Similar CBD Sites

With consideration to the parking requirements at other similar CBD locations, it is considered that there are merits to reduce parking for the commercial component to one space per 155m<sup>2</sup> of gross floor area.

The revised car parking requirements and provisions are shown in Table 8. The proposed modifications to the parking requirements, if approved, will result in a required parking provision of 1,013 car parking spaces as presented in Table 8.

| Land                          | d Use        | Units/Floor<br>Area | DCP Rate                      | Modified<br>Requirements | Parking<br>Provision |

|                               |              | Total               |                               | 1,013                    | 1,073                |

#### Table 8: Proposed Car Parking Provisions

\*The revised VPA requires a total of 316 car parking spaces to be dedicated to Council to satisfy parking demand generated by the residential visitors and retail customers in Site A.

The proposed car parking provision of 1,073 car parking spaces is therefore satisfactory.

However, it is noted that the construction of the proposed development may not be required to be staged as previously planned. If the proposed development was to be constructed in a single stage without any requirements for piling walls, it may be possible to provide parking for the commercial component at a level similar to that stipulated in the DCP.

It is proposed to design the car parking spaces to comply with design requirements set out in the relevant Australian Standard for car parking facilities namely AS2890.1:2004 and AS2890.6:2009.

# Loading Facilities

Consistent with the DA scheme, the revised scheme will continue to have a loading dock comprising:

- one 14.7m long bays (accommodating vehicles up to 14.7m long delivery trucks for the supermarket)
- three 12.5m long bays (accommodating service vehicles up to an Australian Standard 12.5m long heavy rigid vehicle) to be shared different uses of the proposed development;
- two 8.8m long bays (accommodating service vehicles up to an Australian Standard 8.8m long medium rigid vehicle).

The loading dock will include a turn table to assist service vehicles accessing the loading bays, and to facilitate entry and exit in a forward direction.

Swept path diagrams of the loading dock are provided in Attachment One. The diagrams indicate the design vehicles (including Council's large rigid waste collection vehicles) can accessing the loading facility satisfactorily.

### Proposed Driveway Treatments

Following the submission of the DA, JQZ/TTPP has been liaising with Lane Cove Council on the proposed driveway arrangements. Council has requested that the proposed driveway be configured with three traffic lanes at the property boundary. A driveway layback is to be provided such that the access into the driveway appears and operates as a private driveway. In addition, Council has requested for roller shutter gates be provided at the end of the proposed contra flow express residential access instead of bollards.

TTPP confirms that the proposed driveway along the property boundary will be configured with three traffic lanes. The driveway traffic lanes will be configured as follow (from west to east):

- single lane, two-way ramp providing access to the loading dock
- single entry lane into the public car park which also permits residential traffic to diverge into the express ramp in the evening period, and
- single exit lane from the public car park which residential traffic will merge into during the morning period.

The single contra flow express lane/ramp for residential tenants only which will operate as an ingress ramp during the morning period say from 5:00am to 12noon each day and as an egress ramp during the evening period say from 12noon to 5:00am. However, it is envisaged that the time could be adjusted by the body corporate (or similar) to suit on-site conditions and different days of the week as required.

Traffic to/from the contra flow express ramp will diverge/merge with the traffic from the public car park as required.

In addition, barriers and roller shutter gates will be installed to manage the contra flow arrangements. The barriers and roller shutter gates will be installed to Council's requirements.

The driveway layback will be designed and constructed in accordance with Council's design standard and requirements to read as a private driveway.

The updated concept plans for the driveway treatment is contained within Attachment Two of this statement.

### Conclusion

Our review indicates that overall the traffic and parking impacts arising from proposed development will continue to be satisfactory.

We trust the above is to your satisfaction. Should you have any queries regarding the above or require further information, please do not hesitate to contact the undersigned on 8437 7800.

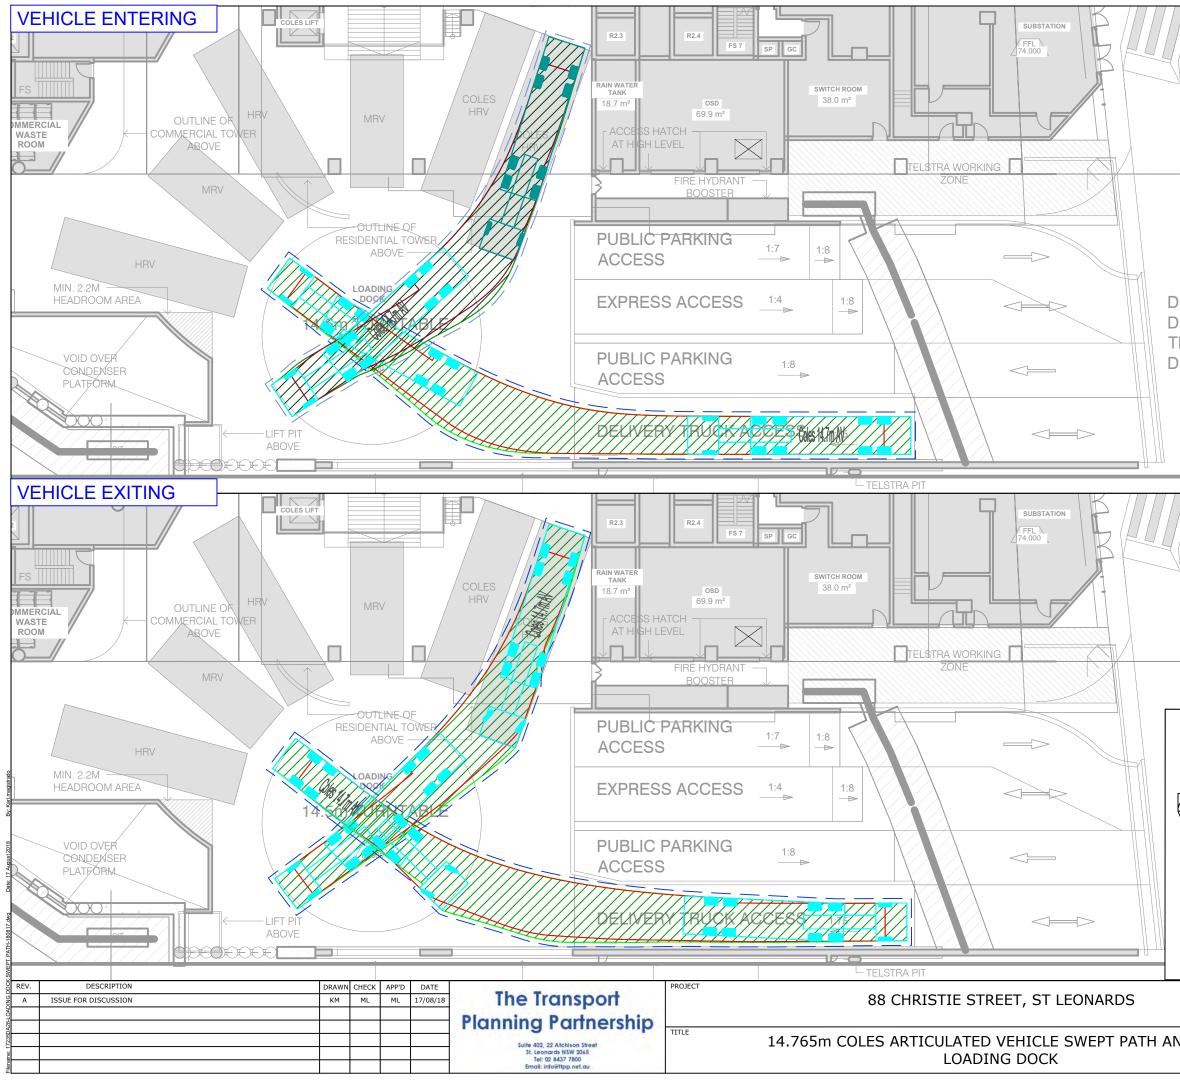

Yours sincerely,

Michael Lee Director
