Ecocidal Industrialisation of Rural NSW/Australia IS NOT FOR THE GREATER GOOD

Wind Electricity Generating Works are NOT Clean, Green or Sustainable - they are ENVIRONMENTAL VANDALISM!

Rye Park Wind Construction - Yass Valley at an earlier stage. With the last photo which is of the site for a sub station. Look for a little silver dot down at the treeline along the road. That's a car!

Photos 6-9

The Scale of Wind Turbine Environmental Vandalism is ENORMOUS & IRREVERSIBLY CATASTROPHIC!

Far Superior Australian NUCLEAR Power has a Minimal Environmental Impact - requiring only 1/360th of the Land Mass that Inferior, Energy Depriving Wind Turbine Junk needs for Ark Energy's Reckless Bowman Creek plan.

Note the 'tiny' car on site!

WHAT TRANSITION?

Global Coal Generation is Soaring in Asia

What Energy Transition? Global Coal-Fired Generation By Region, 1985 to 2022

India & China are Burning Record Amounts of Coal!

Last week Reuters reported India plans to add 17 Gigawatts of New Coal Fired Capacity over the next 16 months!

King Coal Comes Storming Back

China permitted “two new coal plants per week in 2022 ...a staggering 106 GW of new coal capacity” equal to “100 large coal-fired power plants.”

— Global Energy Monitor, Feb. 2023

India turns to coal as hydro generation falls

The Iron Law Of Electricity Strikes Again: Germany Re-Opens Five Lignite-Fired Power Plants

19 CHILDREN DIED FROM CHILDHOOD LEUKAEMIA IN CESANO ROME - LINKED TO THE VATICAN RADIO MAST

- 2 PEOPLE WERE CONSEQUENTLY JAILED!

**UNPLANNED FOR CATASTROPHIC TOXIC INFERNO FIRE/SMOKE HAZARD RISK!
IS THE HOST RESPONSIBLE IF PEOPLE SUFFER CARCINOGENIC IMPACTS/DIE BECAUSE OF THIS?**

**WIND TURBINES ARE A FAKE GREEN SCOURGE -
SHEDDING TONNES OF MICROPLASTICS FROM WIND
TURBINE BLADES (KNOWN AS 'LEADING EDGE
EROSION') - AFTER ONLY A FEW YEARS OF
OPERATION.
THAT'S THEIR HABIT OF CONSTANTLY SHEDDING
TOXIC BISPHENOL A (LETHAL TO YOUNG CHILDREN -
AS TOXIC AS BLUE ASBESTOS) FAR & WIDE!**

Lesson 30: Blade Rot

Turbines are good in theory but bad in practice - they are susceptible to **Blade Rot**.

Airborne particles such as dust, salty air, hailstones, wind storms, fertiliser, and chemical sprays cause considerable damage during high-impact collisions with the fast-spinning turbine blades.

Over time, the tiny particles colliding with the high-speed blades cause major damage to the structure of the blades.

The leading edge of a turbine blade is most vulnerable to deterioration leading to blade rot.

The internal layers of fiberglass separate allowing water to get in, weakening the blade, breaking down the structural integrity of the material, and eventually leading to blade rot.

Engineers in the video clip outline the problem of delamination of turbine blades (Blade Rot)

YouTube.com
The Glaring Engineering Mistake That Made Wind Turbines Inefficient | Massive Engineering Mistakes

[The Glaring Engineering Mistake That Made Wind Turbines Inefficient | Massive Engineering Mistakes - YouTube](#)

This separation of the fiberglass layers is called delamination. Delamination causing blade rot occurs when blades are exposed to the elements. Over time tiny airborne particles colliding with the high-speed blades (over 290kms/hr) eventually cause the breakdown of the blade surface.

The YouTube video explains how the leading edge of the blade (shown in the picture) is vulnerable to delamination and will deteriorate over time.

This results in decreased efficiency of the blade and an increase in special audible characteristics or special loud noises.

	Pit	Gouge	Minor delam.	Major delam.
Depth/diam (mm)	0.5	2.5	3.8	>3.8

Blade Rot

Blade rot reduces the lifespan of turbines. It seems wind companies don't want farmers to spray their land because the chemical and fertiliser residue causes blade degradation. The confidentiality clause in a wind farm lease agreement prevents Host Farmers from disclosing that they are prevented from undergoing normal farming practices such as aerial or ground spraying of crops and pastures.

Prime agricultural land in Oz is therefore lost to turbine blade preservation.

The issues for the neighbours next door:

- Has the noise nuisance increased over time?
- Has the whoosh-whoosh sound become worse? – do the blades squeal or roar louder?
- Do you believe the blades pose a risk to public safety?

Then there's the manufacturing issues.....
