Glanmire Solar Plant. - Objection.

With a family background in agriculture of over 160 years both in what is now suburban Sydney to rural NSW, it always seems to be farmers (food producers) who have to contend with all these grandiose developments, mainly as it is perceived as being easier.

The proposed Glanmire Solar Farm is just an overseas company with no regards for the so called "Renewable Energy Zones", pushing their agenda and trying to place their Solar installation to close to the towns of Ragland, Kelso and city of Bathurst, on fertile farm land which as time goes on will be needed to produce food which humans will need particularly with the huge forecasted increase in the population. Just to promote a multinational company, by pushing in to the wrong Area.

I could keep going on with this subject, however the simple fact is the proposed Glanmire Solar Farm should be stopped because it is on the wrong site, on the wrong land, being fertile food producing land and the wrong location for the city of Bathurst which promotes international tourism.

These Solar installations should not be called Farms as they are not farms they are Industrial factories and should not be allowed in scenic rural locations close to major rural towns.
