

Narrabri CSG – QLD AGENDAS

Santos:

- Nature of existing CSG operations within QLD, including how CSG is extracted and how the current supply chain works;
- Difference between fracking and coal seam gas extraction mechanism;
- Water management related to operational sites, ie brine ponds, reinjection, licenced discharge, etc;
- How is CSG in QLD different to that proposed in Narrabri;
- Is the QLD example representative of what will be seen in NSW at surface level;
- Narrabri CSG proposal;
 - Water impacts – including interaction with State and Federal agencies and legislation;
 - Management and interactions between community interface and social licence;
 - What has gone wrong – extent of environmental disasters and how they have managed them; and
 - Measurement of cumulative impacts.
- CSG operations within NSW into the future, including if they intend to extend their operations should this proposal be approved;
- Examples of community engagement and examples of programs supporting communities within the areas that they operate in Qld;
- Can we meet a landholder who has Santos working on their land to understand how that relationship has developed and how it works during exploration, development, operations and abandonment and rehabilitation.
