

I am a teenager who lives in Minchinbury and I am very concerned about waste from energy. I believe in caring for the environment, however, not at the expense of my health. I suffer from a serious medical condition so cannot afford to have any harmful pollutants cause my health to further decline. I have done some research on waste form energy and all I seem to read are the negative effects on people's health. Alarm bells, people!! Sure, protect the environment by reducing waste but not at the expense of my health. The negative costs of this far outweigh the benefits. Do not ruin my health by allowing this kind of 'technology' to be allowed to go ahead. And also, do not allow the Next Generation plant to be built near my home. I'm only young and I deserve to live a healthy life. I want to be a doctor and help kids like me by finding a cure for their disease. I do not want to die prematurely so some person could make lots of money claiming their proposal was safe. It isn't, simple as that. Energy form waste – NO!
