

26 June 2018

I write to express my support to MOD 3 for the Mount Pleasant Coal Mine Extension of Mine Life (DA 92/97 MOD 3).

Recently relocating to the Hunter Valley region with my family I understand that the work and revenue generated by mines such as Mt Pleasant is critical to the region. Mt Pleasant will be a world class facility providing opportunities to locals and families alike. Additionally as a member of the engineering community, the work generated through the mining community employs not only the direct workers of the mine but thousands of additional families throughout the region.

The global requirement for coal is not reducing and Mt Pleasant has access to some of the best coal in the region. Engineering and operating methods and social responsibility from Companies such as MACH Energy have improved significantly over the years with impact to the environment, pastoral lands and water sources limited to negligible levels.

As an engineering service provider to the Hunter Region I look forward to working with mining companies, particularly progressive companies such as MACH Energy, to help them produce a world class facility.

Yours faithfully,

Wylie Pearson
Hunter Region Lead
