

NARRABRI CSG PROJECT

No one, other than people with a vested interest, want Coal Seam Gas developed in the State of NSW.

Vested interest seems to motivate democratically elected NSW Governments. What is their vested interest? From where I sit this really smells. I go so far as to say that it looks corrupt.

I cannot support this disregard for rural Australia and the Australian people.

23,000 submissions asking for the Narrabri CSG gas project NOT to go ahead should not be disregarded.

CSG is a creeping cancer and I feel it is being supported for the wrong reasons.

I have done a lot of research and the Narrabri project will make no difference to energy prices and the overall prosperity and wellbeing of the state of NSW and this is what has to be taken into consideration.

What it will do is jeopardise sustainable agriculture that can benefit the Australian nation for thousands of years.

What it will do is pollute and destroy ground and artesian water resources that we are going to need in the future.

What it will do is leave us with a toxic waste legacy that future generations will have to deal with. SANTOS cannot tell us what

they are going to do with the mountains of toxic waste this project will produce.

What it will do is create profits for some multinational company, over ONLY twenty years, and ONLY three hundred long term jobs. SANTOS's own figures. The rural sector around Narrabri will create thousands and thousands of jobs, sustainably for the foreseeable future.

Another question must be who will be responsible when we find out that "it" (CSG.....fracking) has all gone wrong?

Another major consideration is that the majority of people DO NOT support CSG. The majority of people want to try and lower our pollution footprints. Because of the questionable information provided by the fossil fuel industry, most people don't understand that at the other end of the pipe where the pretty little clean flame you warm your porridge with comes from is a toxic, polluting inferno.

I just cannot find anything about Unconventional Gas extraction that is any good. Please consider my concerns.
