Malabar Hearing

My name is Travers Wood and I am a Father, Husband and a Mechanical Engineer. I own an electric Car, have solar on my roof and ride my bicycle to work most days.

We need projects like Malabar in NSW. A project that that provides:

- Jobs
- Energy in various forms
- Agriculture opportunities
- Resources for Steel production
- Improvement of the site from the previous owners

Australia is a big country, we have a growing population and this population needs buildings for home and work, hospitals and schools, vehicles for transport (either bikes, buses, trucks and cars). We have long distances to travel and communicate over in Australia. All of these aspects to our life in Australia need resources and steel is common to each of them. Steel produced currently still requires metallurgical coal and until technology changes substantially will need this coal for some time to come.

Not only does the Malabar Project provide this much needed metallurgical coal it will also provide other resources like sustainable power systems from solar, even power to supports thousands of local homes. Combined with on site farming with 100s of hectares of grazing pasture are already rehabilitated along with its own vineyard blending in with their neighbours and the local area and
