

## Objection to Maxwell Underground Mining Project

Here we go again reinvented name for a mining application refused under the names Drayton South, Malabar Coal and Spur Hill.

\*The proposed project with Pit Entrance, Washery, and Rail Loop adjacent to my property 200 meters from my bedroom on Blakefield would force the 3 generations living and working on farm to leave prime farming land that has been owned by Blakes for near 100 years.

\*Acumalitive effects from this proposed mining will cause further pollution with increased dust, water and noise pollution.

\*The generations living on farm are suffering from respiratory illness never know in our family only since the increased mining in the area.

\*Increased noise from the mining would be constant and unbearable.

\*Water tables would be effected and increased pollution of the Hunter River.

\*The propsed underground mining method is dangerous increased chances of river flooding into mine with fatalities.

\*The threat of losing the local Equine industries that create local employment while injection millions of dollars into local businesses.

\*Like our ancestors we want to continue living here raising our families in a healthier, clean Hunter Valley.

MINING POLLUTION NO MORE THANK YOU.
