Re: Wallarah 2
Coal Project SSD 4974

Dear Sir,

This assessment is a farce. The State Government under Barry O'Farrell has no interest in environmental or health issues this coalmine would cause.

The impact from longwall mining would be catastrophic to the valleys destroying the aquifers - a no-brainer, impacting on the Central Coast's water supply. Why destroy this precious life giving gift?

A myriad of pertinent points and scientific facts have been put forward for years by learned people in respect of mining under these valleys and their detrimental effects. These have been ignored by Barry O'Farrell with certain people now under investigation from his ministry, who had always pushed the mine. This in itself is very questionable.

Kores release information or propaganda to suit an outcome in their favour—of course.
We have no respect for Mr. O'Farrell and this State Government with his lies to win votes proclaiming "water not coal" at the last elections.

This is Australia! Do we have any rights to protect what we own? Do we have to die so that South Korea can have a coalmine?

Much can be said "for and against" at this commission on 2nd April, but I would hope that the members of the review will let conscience be their guide in this very serious matter.

Yours faithfully,

Mr. B Donaldson

Mrs. B Donaldson

Mr. Brian Donaldson
Mrs. Carole Donaldson
