Dear Sir/Madam,

We refer to the Notice of Review and Public Hearing Wallarah 2 Coal Project (SSD 4974) Wyong Shire Local Government Area, dated 3rd March 2014. Our company has been associated with the planning of this project since 1999 when we first provided preliminary mine subsidence ground movement predictions for the then planned mine layout. Since then we have provided many revised subsidence predictions and subsidence impact assessments, which we believe are likely to be greater than the measured subsidence, i.e. they should be on the conservative, or cautious, side. We look forward to assisting the PAC members in their review of these ground movement predictions and the assessments of the likely consequences and impacts from these ground movements.

Kind regards,

Don Kay

Director
