

Cory Robertson PAC presentation for : Bylong Coal Project

I'm here in support of the Common Good.

The common good is to look after each other and our community with the basics of a roof over your head (house), healthy food in your belly and, a job which contributes to the quality of your lifestyle and the local community.

And the core to this common good is Commerce.

Commerce that is shared. Commerce that co-exists. Commerce that compliments and leverages the capabilities with opportunities to improve the lifestyle and strength of the local communities and the region. Commerce that can be created by the Bylong Coal Project.

I have lived in this local region on and off for 12 years. I was raised and schooled in the broader district and have played sport and have worked and done business locally for over 20 years.

My business and industry experience and networks are in:

- Agriculture
- Mining
- Hospitality / Tourism
- Civil construction
- Education & Training: schools programs and recruitment solutions
- Asia: trade and relationship alliances – namely China

It's with this experience I see the enviable and quality opportunities the Bylong Coal Project and Kepco can bring to the local district and beyond.

Building on and complimenting the regions history, current resources and capabilities in:

- Industry: agriculture, mining, tourism
- Infrastructure: road & rail networks
- Regional growth, education and training resources and proximity to local and export markets

This project brings precious jobs, commercial investment and spend to the local smaller towns and villages where it is needed the most.

Kepco are an economic powerhouse who can create an ENERGY Hub and resources which support and value add their energy business with:

- Food – traditional and advanced agricultural
- Electricity / power: quality thermal coal

- People – engage and employ current and attract future local residents to participate in the commerce created. Engage schools and community networks to help residents stay local with local jobs

So it's with these opportunities before us that can serve the common good. Is why we are here to find common ground.

Common ground that PROTECTS, MONITORS and SUSTAINS the local Environment:

- Natural resources – namely water
- Economically – creating and sharing commerce with construction + operational + contract service jobs and spend. Plus extend markets for agricultural and tourism into Asia – namely Korea.
- Socially – commerce and peoples contribution to a strong community, better resources and lifestyles

Everyone who presents / speaks here today in their own opinion and with their supporters and their facts and figures will be RIGHT.

To continue and extend the regions growth and prosperity in agriculture, mining, tourism and lifestyle, Kepco can add real value and have committed to do such.

Through quality and sincere collaboration this project can be transformational for the local community and all stakeholders can be ALRIGHT.

We are all in the Lifestyle game.

I support Kepco's commitment to deliver such.
