

To Whom It May Concern,

I am writing this submission with regard to the proposed waste incinerator at Eastern Creek. Firstly I would like to say how frightened, scared and anxious I am that this may have been a possibility living so close to the proposed site. How can anyone say that this incinerator is good for anything or anyone. Yes, it lines the pockets of the proposer but that's where it stops.

There are so many people these days with respiratory conditions including asthma, C.O.P.D, Chronic Bronchitis, Emphysema, Lung Cancer, Cystic Fibrosis and Pneumonia to name a few. Myself and my 4 yr old grandson both have asthma. I, like him, was born with it but through self management and medications I have led a very normal life. Just over a year ago my husband and I put a pool in to help our grandson exercise his little lungs. It gets him outside in the fresh air and he absolutely loves it. If this proposal went ahead we would have to move for obvious reasons. My grandson lives with us 5 out of 7 days and his little life has just begun. My husband has just retired and I am not far off, which means I will be spending more time at home and outside.

We have recently had our home valued and we were wondering who would compensate us if our home devalued and we had to move for medical reasons because of this proposal going through. There are schools and sporting fields and venues so very close to this proposed site.

Please don't put profits before people. Our community and our children deserve more than this, not forgetting the elderly who usually, as we age, have already established a number of health related issues to deal with. I was also told that the toxins and poisons will travel through the air for many kilometres reaching further than the suburbs outlined, for maybe 30klms ( as the crow flies ) ..... is this true ??

Please don't let this preposterous proposal go ahead. As a community we have all fought with dignity and stood up for what we believe in. Please don't make our efforts fruitless in denying us better quality breathing air without the deadly toxins and poisons. And not just for us but for our next generation so that their health won't be compromised in anyway. People Matter More Than Profits.

Kind Regards

Judy Wilson
