- We lift up a SHOUT! We're mad as hell and we're not gonna take it any more!
- How dare this government even think about allowing a toxic incinerator to be built in the middle of Sydney putting the health of all its citizens at risk!
- The world's largest incinerator in Sydney running 24/7 for the next 30-50 years adding more pollution to our air and water is disgraceful and we the people will continue to stand in solidarity against it!
- Who in their right mind would approve toxic emissions to contaminate our air quality from the Blue Mountains to Bondi? *A recent study (Nov 2017 University of New York) found that living near a waste to energy incinerator carries the same health risks as secondhand cigarette smoke.*
- It is alarming to hear the toxic Incinerator would be located only a short distance to the Prospect Reservoir which forms part of the drinking water for 4.5 million people in Greater Sydney.
- That's 70% of NSW drinking water put under threat of contamination!
- The Blacktown local bioretention basin will be used to filter waste water, silt and sediment from the incinerator. This practice would put the Hawkesbury/Nepean River system, at high risk.
- These waters support agricultural and horticultural industries which supply much of Sydney's fresh food! Toxic emissions can also enter the food chain through meat and eggs.
- The fallout from this incinerator will impact greatly on the health of every Sydney-sider and we need to continue to shout it from the rooftops. Wake up Sydney!
- Is it really too much to ask this government for clean air and water for our children and grandchildren! Why are we even considering adding more pollution to our beautiful State!
