Subject: [SPAM DETECTED BY EXO] Submission: Bylong coal project
Date: Wednesday, 10 October 2018 2:45:29 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Greg Gilbert

Subject: [SPAM DETECTED BY EXO] Submission: Bylong coal project
Date: Wednesday, 10 October 2018 2:53:07 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

In light of the IPCC report, there should be NO NEW COAL MINES ever again. Do you want any of us to have a future at all? Here is your chance to do what's right and start the trend. History, what's left of it, will judge harshly everyone who went ahead with business as usual after the alarm bells well and truly started to ring.

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining. Food production is more vital than coal extraction.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry. Coal money is not more important than money from other industries and has a shorter history. Any mine from here on out WILL become a stranded asset. Don't think short term.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead. Since when is coal, and coal company profits, more important than water? We can't drink the stuff.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Subject: NO MORE NEW OR EXPANDED COAL MINES - Bylong project
Date: Tuesday, 9 October 2018 5:00:39 PM

I and my family object strongly to this coal mine and any other that is being considered. In light of the clear warning from the world's climate scientists, any further approval of coal mines would be irresponsible. It could even be considered an act of terrorism since the consequences of continued use of fossil fuels will be so devastating for present and future generations.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

Form letter follows:

I just sent this email to the Governor General:

<https://www.gg.gov.au/about-governor-g>Dear Governor General,

I am concerned that the Australian Government is ignoring reports from its own scientists and international scientists to transition from a fossil fuel economy to renewable energy.

I have written to Scott Morrison to ask for this but received no reply.

I would ask that you contact the PM and suggest he adopts the recommendation's of these reports. Alternatively call for an early election so people can vote about this as it will be an election issue.

I have experience of the renewable energy industry and I know that it is now cost comparable to coal. And is not as destructive of good farming land as coal and gas.

The LNP is too close to the economic side of fossil fuel to make the necessary hard decisions. Its no longer a question of economics, its a question of survival of our grandchildren. Try counting your money when you can't breath.

Thank you for reading this and I know I can count on you to reply.

Yours sincerely

Peter Warren

Dear Planning Commission

The Bylong Coal project is well passed its use-by date.

I worked in the fossil fuel industry to learn about climate change from the sector's most senior representatives, in the 1980s and 1990s.

The US National Oceanic and Atmospheric Administration information is consistent with the IPCC's now chilling report, an information, not belief document.

There is a further point to be made. Fossil is filthy and destructive, from mining, through transportation, to generation of power, and therefore has no place, in a vastly polluted world, of more than 7bln, rightly wanting a clean and rewarding standard of living.

Yours sincerely,
Graeme Tychsen

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 3:46:29 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Your agency should find it almost beyond belief that at a time when global science is aligned with international agencies to warn governments about the future use of fossil fuels we have State and Federal government Ministers approving business as before while professing not to have even read the latest authoritative material. Please show that a respect for rational, informed and independent decision making survives in your important jurisdiction.

Yours sincerely,

Paul Munro

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 3:35:32 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

The Australian government has committed to the Paris agreement. When the coal is sold and burnt CO₂ will be released into the air causing global warming. So approving this mine is against government policy.

The CO₂ from the coal will have a significant effect on global warming, which makes the effects droughts and therefore affects the rest of the state and the Bylong valley, thus causing financial hardship for our farmers

. Combine this with the Bylong river drying and you have disaster for the area. The effects will be felt way outside the mining allotment

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

I am not protesting against this coal mine on the basis of climate change. Climate change is climate change, it's always been a variable and always will be, but destruction of this agricultural valley will be permanent. I hope you understand that that means FOREVER. Australia is not so blessed with fine agricultural land that it can afford to destroy what it has been blessed with, especially now that the whole country has been reminded like never before in the minds of most people alive today, of just how damaging to people's lives an Australian drought can be.

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

Australia has some beautiful areas. Some of these areas are also important agricultural areas. The Bylong valley fits this description. To put a coal mine in areas like this is obscene. The mine will suck up water from the river, interfere with the artesian water and despoil the area for tourism. Whatever your feelings about global warming, renewable energy is taking over from coal simply because it is better and cheaper.

In just a few years this coal mine will find getting a proper return on investment harder and harder, but the damage will be forever. Allowing a new coal mine, especially in the pristine Bylong Valley, is a very short sighted decision and I hope you reconsider it.

Yours sincerely,
Jacque Alway

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- Before long the need for good quality clean soil for the worlds enormous population's food needs will be paramount and so productive clean soil fro crops should be an equal if not higher economic, social and environmental priority than coal mining. We need foresight in planning for strategic reserves of relatively clean productive land.
- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead. All aquifers were once clean when we had a lower population. Polluting them as the population grows is irresponsible.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 3:04:25 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

- Please recognise the state heritage significance of the site, as already this state has lost far too much built heritage.
- All new coal mining should cease and old mines phased out starting immediately. Our farmland, rivers and adjoining Blue Mountains world heritage area, will be negatively impacted by the work.
- Knowledgeable scientists and IPPC, who's words should be heeded, have said it is the responsibility of governments world-wide to take serious action re burning of fossil fuels, to mitigate the effects of climate change. The electorate takes this seriously and demand urgent action taken to benefit the majority.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.

As such, I strongly object to the prospect of KEPCO's proposed coal mine.

Yours sincerely,
Sandra Shergill

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 3:02:36 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Jenny Gregory

I'm incredibly sick of hearing stories about how the rest of the world are moving forward with greener energy options, battling climate control and making intelligent decisions to preserve our earth for the future generations whilst Australia continues to have backwards thinking, fueled by money and cashing in for big businesses & our government only worrying about the now & about themselves. Very disappointing.

As leaders, you have the critical responsibility to balance the needs of people with that of the environment. Irreversibly destroying this pristine and productive area is an abuse of your power and shows complete lack of vision and leadership.

I urge you to consider the destruction you will cause and leave for future generations, and reject the money you are accepting from heartless foreign, self interested parties. Leave this area as it stands and perhaps even take a drive to it and absorb its beauty.

I object to this coal mine and urge the Independent Planning Commission to reject it.
At the time when world scientists (IPCC) recommend to close all coal mining it would be irresponsible to give the go ahead to this mine that would impact greatly on agriculture and on the heritage value of the area.

Already too much good land is disappearing under new house estates and mines which once established do not provide the employment that they claim to create..,

I urge you to reject this submission.

Thank you

My wife and I travel the Bylong Valley Way regularly to visit family in Bathurst. We are constantly in awe and amazed by the grandeur and tranquillity of this place. To commence a coal mine in the middle of this picturesque area would be an absolute travesty. Living in an area of the Hunter Valley and adjacent to several major coal operations we know only too well the affects that these mines have on the community. From the dust, noise and visual impact to the disruption of community life. We are not anti mining but think that there are other areas that could be considered without imposing this type of developement on an area as pristine as the Bylong Valley with it proven agriculture development and not to be poluted with the effects of mining.

- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.
- If they wish to mine our land let them dig up some other part of our Country where it will not affect heritage listings or more importantly aquifers that are necessary for long term sustainability of our population, and people living around such places. It is ludicrous that Government should be listening to bureaucrats rather than to the general public, who should have more say in what is done with the land and environment in and around their properties.
- There an election coming up in early 2019 that will allow residents around the Bylong Valley and surrounds to VOTE your Government out of power if you are to proceed with this ludicrous decision, just as it is being considered by around 950,000 fishermen that the Berijiklian Liberal Party and its co-horts in the National Party are contemplating blocking out fishermen from a NEW lot of 25 Marine Parks from Newcastle to Wollongong, that we as fishermen will castrate the Coalition parties at the next election in 2019 IF THEY DO NOT LISTEN to us. Please heed this advice, because you will rue the day that you take the Australian public for granted, just like that what is occurring with the Light Rail Project through the inner city limits and surrounding suburban areas

Subject: Submission: Bylong coal project
Date: Wednesday, 10 October 2018 1:54:19 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Maria Pye

This is a submission on the Bylong coal project.

The IPCC, which is science based has asked the world to do its best to reduce climate change.

If the Byline coal mine goes ahead it is risking the entire world.

Responsible advice from Independent Planning would be to not open any more coal mines.

Yours sincerely,
Bronwen Evans

Thank you for the opportunity to make a submission on the Bylong coal project.

I would like to register my strongest opposition to this coal mine being approved. I sincerely hope that the Independent Planning Commission is able to independently review this proposal and reject it in its entirety.

My overarching concerns are for the impact of the mine on the local environment and community, and for the very serious threat it poses to longterm health and wellbeing of us all.

The very idea of building a dirty polluting open cut coal mine in a state heritage listed area is appalling. Not only will the mine irreversably damage the environment in immediate area but it also threatens our iconic Blue Mountain national park, and will have a serious wider impact on the surrounding environment, rivers and aquifers. The development will also threaten farm lands in the vicinity and it will take precious water out of the environment at a time when water is becoming an increasingly valuable and scarce resource. It will also threaten public health, not just of local communities (and the science is very clear about the dangerous health impacts of open cut coal mining and coal dust) , but of all of us, as we are forced to live with the consequences of the immense amount of carbon pollution created by this project.

And that's not even considering the threat it poses to the flourishing tourist industry in the area.

At a time when we are facing seriously frightening warnings about the impact of continuing to dig up and use fossil fuels, and we are already facing longer and harsher droughts and heat waves, it is ridiculous to even be considering opening up beautiful forest and farm areas to coal mining - a dirty, dangerous 19th century industry.

I implore the committee to reject this project - for environmental, health based, economic reasons. Do not put the short term interests of a Korean mining magnate above the future safety and wellbeing of your children and grandchildren. You will be judged on your decisions by future generations.

There are other sustainable and non-life threatening industries which can provide employment in this area.

Yours sincerely,

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 5:21:57 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

David Bibo

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 5:21:47 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

Yesterday, a report was released that stated all coal usage must cease by 2050, in order to halt increase in temperature at 1.5 degrees by 2050.

For this reason and because the mine will destroy precious agricultural land and, potentially, the bylong river and its alluvial aquifer, the project should not go ahead.

Yours sincerely,
Patricia Kath

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 5:18:10 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Robert Ortiz

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety. The very idea of creating new coal mines when the world is already cooking, is utterly utterly stupid. I simply can't believe this development is even being considered. Climate scientists have no reason to fabricate their findings. Their findings are estimates but founded on the best possible modelling. To risk that they are incorrect and there is no need to worry about climate change is plainly idiotic and corrupt.

As an older generational Australian I have seen so many rash short term government plans to destroy our beautiful country.

Fortunately people object and we still have the Tasmanian Wilderness, the Terrania Creek area, the Noosa and Burleigh Heads headland reserves.

Coal is not the answer. It is the problem. We have saved Bentley from Fracking and our grandchildren thank us. Now your government wants to mine Bylong. It's not responsible, ethical or environmental decision it's an outrage!

This is a submission on the Bylong coal project.

I have VERY grave concerns that The Independent Planning Commission is proposing to make a final decision on allowing the Bylong Mine to proceed. It should be rejected entirely. The day after

the IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change is not the time to open yet another coal mine.

Quite apart from the entire landscape of the Bylong being of heritage landscape significance and that these values will be destroyed

this mine should not proceed because:

- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.

- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.

- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead.

My overarching concern is the continuing production of coal at a time when the whole world needs to be doing all it can to reduce our dependence on fossil fuels in order for there to be world that is inhabitable for our children and grandchildren. A 2 degree rise in temperature is going to have such incredible and awful impacts on food production, water and the environment that it will be extremely unpleasant to live in. That is NOT what we need for subsequent generations. We have a responsibility to do all we can NOW to reduce this horrific impact.

If we continue to ignore the climate change problem it won't be long before we mad to pay penalties for not contributing to critical action and dealt out of international trade.

We continue to open coal; mines at our peril. PLEASE DO NOT GIVE PERMISSION.

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 5:11:51 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area where I live.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining. I cannot understand why we are not protecting valuable agricultural land.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could "run dry" if the mine goes ahead. At present, Federal and State Governments seem to be "hell bent" on putting precious aquifers at risk.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Ross Dickens

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 5:07:59 PM

This is a submission on the Bylong coal project. I strongly object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should definitely not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- and most importantly the IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Alan Hayward

- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change. This flies in the face of this warning and from a climate change perspective should NOT go ahead. Nor should any other coal mine. Coal is on its death bed and the only thing keeping it alive is politicians who keep insisting that coal is not an issue. Indeed it is and renewables are now much cheaper than coal. Even Origin and AGL agree on that. So why would anyone want to open a new coal mine? Just to appease a company that specialises in fossil fuels. There are more jobs on renewables than in coal mining and they are safer as well. So think about it there can really be no reason for this that makes sense.

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because: this is valuable alluvial land ! Suitable for growing food , please don't destroy it !

Our farm in the beautiful hunter valley was claimed for mining ! It's a mess now .. and it was a lovely soil on the banks of the hunter river .. please you must stop this madness... we have to feed a growing population somehow ! Go mine in a desert!!!

Jane and David McBride

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 5:03:11 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Jantine Hensen

As an ex resident of the Bylong valley a short distance from the village itself, and as someone who has personally witnessed the destruction of a community, I am urging you to reject this proposed mine. But above all, as a citizen of the world, as a father and grandfather who is deeply concerned for the future generations on planet Earth, given the latest IPPC report, I sincerely and passionately ask you to reject this project.

I support the campaign below:

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.

I've left the form letter content below, because I agree with it 100%. But I had to add a personal plea for some well overdue restraint on NSW coal mining. It exceeds the potential Adani disaster in Qld! We don't need it. The majority of voters don't want it. Stop it.

We have enough. And my children will have to pay to fix the mess of another abandoned mine years down the track, because the owners and mining company sure as heck won't. PLUS the global damage.

Please just stop. Thanks

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 4:59:43 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

I implore you to say no to this destructive mine.

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- As a regular tourist travelling through this area with my friends I know the unique beauty of the area. Turning into an open cut mine is like turning the Opera House into a land fill site.
- The short term economic gain is nothing compared to the long term loss of the unique landscape (its World Heritage stuff).
- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

This is a submission on the Bylong coal project. I strongly object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

It is imperative that this mine is denied because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine would irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine would directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine would destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine would devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

More mining of coal is counter intuitive and to contemplate it is to fly in the face of current scientific knowledge from across the world

Date: Tuesday, 9 October 2018 4:56:43 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Chris Latta

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety. You sit on a body called a PLANNING commission. The most important planning we should all be doing now is how to limit global warming by phasing out fossil fuels. Furthermore:

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.

- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Paulette Kay

Subject: Submission: Bylong coal project
Date: Tuesday, 9 October 2018 4:53:10 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Rachael Middleton

Subject: Submission: Greedy mining companies will be the death of this beautiful country & planet. You will also be responsible if you allow this project to commence.
Date: Tuesday, 9 October 2018 5:26:06 PM

This is a submission on the Bylong coal project. I object to this coal mine and urge the Independent Planning Commission to reject it in its entirety.

This mine should not proceed because:

- The entire landscape of the Bylong Valley has state heritage significance, as identified by the expert heritage report by Hector Abrahams Architects.
- The mine will irreparably damage these values, and also have broader heritage impacts because it adjoins the Greater Blue Mountains World Heritage Area.
- This mine will directly open cut strategic agricultural land which cannot be replaced. All such land should be off-limits to coal mining.
- The mine will destroy areas that have been mapped as part of the Critical Industry Cluster for the equine industry.
- This mine will devastate the Bylong River and its alluvial aquifer. Government experts warned internally the river could “run dry” if the mine goes ahead.
- The IPCC has released new warnings that global warming needs to be limited to 1.5 degrees and fossil fuels should be phased out quickly to avoid catastrophic change.

Yours sincerely,

Shayne Ward
