I am in favour of an improvement to Arons Pass Road but not clearing from boundary fence to boundary fence.

Some think 6 metres is wide enough. Minimum

I think that is not enough for safety on a road that is getting used much more these days.

In doing the clearing of trees I think it would be more affective to push the trees completely out and not cut them down with chain saws. They will reshoot and not make the road any wider.

C.W.P. did the wrong thing in going ahead putting roads etc in the project site before doing the improvements to Arons Pass Road.

This caused them to be stopped from doing any further work.

In saying this I am not happy with them bringing long heavy loads in on the Pyramul - Sallys Flat Road and when they were stopped, taking these heavy machines back out on the Pyramul - Sallys Flat Road.

I presume if they get approval to go ahead again they will do the same thing again. Therefore I think C.W.P. should maintain all the roads they use in constructing the Wind Farm, not just Arons Pass Rd.

While C.W.P. was here doing the construction before, they were using the Pyramul - Sallys Flat Road carting water to Sallys Flat construction site which seemed very poor management.

The government is spending huge amounts of money on wind farms and solar farms but I think they would be better off building clean coal fired power stations with a much more reliable power supply.

Over seas countries are building huge numbers of coal fired power stations but Australia is too stupid to build one. Australia will never solve the worlds pollution problems.

The greenies are taking Australia over with their protests etc, not wanting any dams or coal fired power stations. When they have black outs and no water to drink they may think differently.

C.W.P. cannot be blamed for all the dust in the district.

Those of us that have lived in the bush all our lives are used to dust and it is a hazard of living in the bush.

Thank you
