OBJECTION

I object for the following reasons.

The covid-19 pandemic is a global on-going pandemic that shows us that Paul Valéry is correct with his comment: "The future is not what it used to be." Climate change is still not being adequately addressed despite its growing global threats to life on earth.

Underground water recharge into the Great Artesian Basin.

Danger of environmental pollution to water in the food production areas.

The 16 recommendations for the Chief Scientists Report ~~have~~ to the N.S.W Government have not been fully completed, in particular there is no

insurance coverage for environmental damage recommendation No. 9

World-wide gas prices are falling & like coal prices, gas ^{assets} ~~prices~~ are being stranded, so there is a lack of good economic basis for still using gas as a transition fuel.

No proper answer for handling toxic salt-generated in production processes.

Damage to the ancestral land of the Gomeroi people.

Adverse health threats to the local human population as well as

to the ~~fauna~~, non-voting fauna, flora & fungi species.

Increased risk of bushfires through flaring.

I wish you all the best in your deliberations on the future you choose for those you cherish.

Yours faithfully,

Harry Johnson
