Dear Sirs,  
The risk of contaminating the QAB is far greater than any perceived advantage of the gas produced.  
If the QAB is contaminated to the extent that stock requires a witholding period or Export Slaughter Interval a huge percentage of the stock in Northern NSW & Southern QLD

Please continue on back side.

RTO

will not be available for human consumption causing a far greater economic loss to the State than any advantage of export gas.

The risk to the water in the GAB is very great & it is unconscionable to put this asset at risk for short term gain.

The flowing here known as Fishers No. 1 is a very property but stopped flowing last year due to over attraction of the resource by Water NSW.

It would be a far greater case if the same effort was put into the provision of nuclear power for every generation.
