## Submission in Objection - Narrabri Gas Project

State Significant Development

# Narrabri Gas

The project involves the progressive development of a coal seam gas field over 20 years with up to 850 gas wells and ancillary infrastructure, including gas processing and water treatment facilities.

John Lazarus  
6 Bunjil Place  
Byron Bay  
NSW 2481

- 1) There is no shortage of gas for domestic use
  - a) Mining for Australian CSG was commenced on the lie that CSG was needed for domestic gas use , whereas the oil industry identified that we had (and still have) over 100 years of gas supply from gas supplies associated with existing oil production, .
  - 2) Mining for Australian CSG was commenced on the lie that CSG was would bring gas prices down, whereas prices have gone up
  - 3) New CSG will not bring domestic gas prices down as domestic prices are now aligned with CSG export prices

The same lies, of domestic need and cheaper prices, are being used to promote the proposed Narrabri gas field, while the majority of present and proposed CSG is actually for export, not to provide supplies for Australian business and domestic use.

At best the Narrabri supply will release other existing CSG presently used for domestic supply, for export

- 4) The proposed pollution from burning new gas incites increased intensity of Global Warming
  - a) The global arrangement of only counting carbon pollution in the country where gas is burnt has been demonstrated as a failed management technique, and has not provided a mechanism to even reach the Paris targets
  - b) The Paris Agreement was only a start to initiate addressing 20% of present global carbon pollution, but even that initiative has failed.
  - c) This proposed new CSG fields Carbon Pollutions Cumulative impacts have not been assessed

Neither on the Cumulative Impacts from all other Australian CSG mining, or on the Cumulative Impacts on all other global carbon pollution (whether the gas is burnt

here or overseas).

d) The adverse climate impacts from the levels of present Carbon Pollution are causing deaths (>450 from the incitement of higher intensity bush fires and higher number of pyroclastic bush fire storms from last seasons bush fire season).

e) Despite, that for 50 years all levels of government have known, or should have known, of the scientific advice of carbon pollution impacts on Global Warming, the evidence has been callously ignored, and people are being killed by the direct climate impacts from our increasing levels of carbon pollution.

f) Australia presently has the highest per capita carbon pollution of any industrialised nation, and thus Globally is the worst per-head-of-population polluter on the planet.

g) Australias Criminal law states 'Callous disregard to the impacts of an act that causes death is an act of Murder' - thus facillitating carbon pollution, in this era of an out-of-balance carbon cycle, is a prima facie act of Murder.

h) Bureaucrats responsible for carbon pollution are a prima facie party to Murder (there is no 'just doing my job' defence against Murder charges),

i) The Prime Minister is culpable for the worlds worst per-head-of-population management of this pollution, and thus is prima facie culpable for global Mass Murder and Crimes Against Humanity.

j) Failure to now regulate increases in Australias Carbon Pollution is likely to incite the public to take legitimate self defence actions against these ongoing pollution caused Murders

5) The natural resource of CSG is 'not wasted' by leaving it in the ground, it is 'money in the bank' that can be exploited when we get the earths carbon cycle back into balance - noting the accredited scientists projection that we now only have 11 years to get the earths carbon cycle back into balance, or there will be run away global warming that will bring down every industrialised nation and cause potentially billions of deaths and leave this planet unfit for human occupation.

EITHER ACT RESPONSIBLY, AND ACKNOWLEDGE THAT WHAT WE MAKE UP (ie your planning decision) IS SUBORDINATE AND SUBJECT TO WHAT WE DONT MAKE UP (ie how the earths natural process function), OR BE TREATED AND HELD RESPONSIBLE FOR THE SUBSEQUENT PRIMA FACIE ACTS OF MURDER, AND THE UNAVOIDABLE ASSOCIATED CARBON POLLUTION DESTRUCTION OF LAND AND OCEAN FOOD RESOURCES, AND PRIVATE PROPERTY, DESTRUCTION.

Frankly it is outrageous that you are seeking public Submissions on whether to allow a major carbon polluting development that will cause further deaths and destruction.

Stop the addition of a Narrabri Gas Field development, to the global lemming like march to global carbon pollution devastation, and the global social and natural environment human survival support systems collapse.
