Submission *Dear Sir or Madam,*

- 1 x In 2014 the chief NSW Scientist stated CSG can be managed safely but only 2 of her 16 requirements have been implemented.
- 2 x Another major worry for us out here is the denial of INSURANCE to customers who have CSG or shale gas activities on their land
- 3 x The groundwater modelling is in unknown territory because little is known about deeper aquifers + dewatering of them + also pollution

Please continue on back side.

of these aquifers. The loss of pressure + water from the southern recharge of the great artesian basin + the hundreds of

our bores and our ability to run our businesses is under threat - we can't exist out here without water

4 The toxic salt & heavy metals that will be brought to the surface is extremely concerning where will this go to - How will these toxic elements be disposed of?

5 The Changing Climate would have to be the most frightening shadow over ^{our} planet & our ability to survive & live viably relies on us consuming less fossil fuels & investing into renewables that don't risk our very existence & poisoning of water & land.

6 The Global gas market is totally oversupplied world wide - The CSG or fracking industry has been described as a ponzi scheme!

The corruption, greed and level of destruction in the USA is well known - Record high bankruptcies, well heads leaking methane abandoned by corporations, defiling the environment and hastening our demise on the land & planet

I beseech you to consider your family, children & grandchildren & the world your asking them to take on. Don't allow CSG to destroy our future

Yours sincerely

Prue F. Cullen
