Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As a resident of Coonabarabran, I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

James Moffat

New South Wales, 2357, Australia

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga forest, surrounding farmland and water is important to us all and risks to endangered species and our climate are unacceptable and not a part of the legacy I wish to leave future generations - human and beyond.

The Pilliga is an area of national heritage. We are the custodians of ALL the lives in the region and the Narrabri Gas Project risks the forest, animals and local cultural heritage, among other things. In particular:

- A total of 35 threatened animals and 10 threatened plants (within the project area) rely on the Pilliga for survival— including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo and Diamond Firetail.
- Santos' proposal to clear nearly 1,000ha of the Pilliga will cause significant fragmentation within the forest, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. This will threaten fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt breeding cycles and adversely affect habitat critical to the survival of these species. this should not be risked!!
- The project threatens the Pilliga Mouse due to the spread of invasive predator species, and consequent increased rates of predation; the increased fragmentation from access tracks and dispersed clearance potentially creating unfavourable microclimates, open space, and traffic disturbances. The loss of habitat in small patches across connecting lines is significant and would result in species decline and potential extinction. I don't want this to happen on my watch.

I also object on the grounds that the NSW Chief Scientist's concerns and comments in the NSW Legislative Council's Portfolio Committee 4. Report 42. February 2020 "The implementation of the recommendations contained in the

NSW Chief Scientist's Independent Review of Coal Seam Gas Activities in New South Wales." These demonstrate a cavalier approach that we cannot accept.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

Please do not include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am graduate student in environmental science. As a young Australian, I am particularly concerned that the Narrabri Gas Project, as a new large-scale fossil fuel development, would lock in carbon-intensive energy production that poses unacceptable risks to the climate, in addition the threatening the Pilliga forest, surrounding farmland and water sources.

Coal seam gas (CSG) is known for causing land degradation, contamination of groundwater and waterways, and negative impacts to air quality and the health of workers and nearby residents. The Narrabri Gas Project would see up to 850 CSG wells across 95,000 hectares of land in a region connected to the Great Artesian Basin, with productive agricultural land, important habitat for biodiversity, and indigenous heritage and cultural sites of the Gamilaroi people.

This is completely unacceptable at a time when wildlife and ecological communities are at great threat due to Australia's ongoing extinction crisis, the recent devastating bushfires, and the climate crisis. Choosing to invest in new fossil fuel projects, including unconventional gas, will lock us in to carbon-intensive emissions trajectories at a time when Australia must take rapid action to decarbonise the economy. The project would result in the emission of methane, which has a global warming potential that is 85 times greater than carbon dioxide on a 20-year timescale. This project will become one of the top 100 greenhouse gas emitters in Australia if approved.

The Narrabri Gas Project has widespread community and political opposition. 98.7% of landowners covering 3.2 million hectares surrounding the Pilliga say 'NO' to CSG, in ongoing community surveys.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a NSW retiree who has spent time travelling around the countryside. I am concerned about the excessive deforestation of the state, and also the indiscriminate use of vital water in pursuit of carbon based fossil fuels. The need to urgently reduce our use of greenhouse emitting fuels is well known. We have visited Dandry Gorge, the Sandstone Caves in the Pilliga Nature Reserve, and looked out from the escarpment. To contemplate 850+ Gas Wells in the region will make our outback look like a scene from Five Easy Pieces.

I have a number of objections to this project:

1/

Destruction of native habitat in an area where native species (both flora and fauna) are under threat. It seems unwarranted that the State Government is proposing support to improve the koala population on the one hand, and actively promoting destruction of habitat in a region that was famous for it's koalas.

2/

A project that will actively increase Australia's direct greenhouse emissions over a period of 25 years, when we MUST reduce.

An article in the SMH today notes that the project will add around 5 million tonnes of CO2 per year over the life of the project, where currently Australia needs to reduce by 7.5 million tonnes per year to meet proposed 2030 reduction targets. CSG is a fossil fuel.

3/

CSG extraction makes extensive use of water (a precious resource) which is contaminated in the process. The contamination can be both by pumping contaminated water (with salts and other noxious chemicals) from aquifers, and by the need to store this extracted water. CSG extraction also involves hydraulic fracking where water laden with chemicals is pumped into fissures to force gas out by pressure. These water affects may also compromise the artesian water supplies needed by agriculture, and native forest. The case of Linc Energy is worth noting.

4/

The economic modelling indicates that the cost of extraction in the Narrabri project would not help local gas prices, and may increase it. A report by Pegasus Economics estimated that extraction costs would be around \$7.40 per Gigajoule, more than twice the cost of QLD gas. Australia already has more than enough gas supply, but most of the production is being sent overseas. This is what causes our high price problems(<https://reneweconomy.com.au/narrabri-csg-project-damned-as-fairy-tale-that-wont-cut-gas-prices-52584/>)

5/

A CSIRO report indicates that Australia would be better off investing in the renewables Industry. Its report indicates that by 2025 solar is the most cost effective power source - and it is clean and green (CSIRO:Electricity generation technology cost projections 2017-2050 Appendix A)

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: I am a retired high school teacher who has had the pleasure and privilege of enlightening young minds to the wonders of the universe. The universe is a big big space and not too many people, young or old are able to grasp it's magnitude. To give it relevance we break down the concepts of humans in their living environments into bite-size, digestible chunks. 'The universe' condenses into a series of planets that becomes our solar system that reduces to our earth and eventually to our backyard. The objective is to show young people that what they do in this world impacts ultimately, on the whole world.

Sadly, natural resource juggernauts such as Santos have convinced share holders(via a global monopolised media) that the 'need for greed' is paramount to the need for survival. eg. no clean water = no life. Equally regrettable is that contemporary populist governments encourage this wholesale exploitation.

Dear Independent Planning Commission - here is your rare opportunity to show Australia, and the world, that you care.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Pilliga Scrub is the largest remaining inland forest in the state. It is unusual with trees far larger than would be expected from the appearance of the land, flat and sandy. There must be significant water deep down allowing the ground to support a highly distinctive forest (David Hollands 2008, Owls Frogmouths and Nightjars of Australia published by Bloomings Books). Underground water supports not only this unique culturally and biodiverse forest but also surrounding agriculture. These farms rely exclusively on underground water to irrigate their crops. When there is no significant rainfall for several years the whole region including Narrabri township relies on underground water for everything from drinking to washing to industry. It is estimated that CSG mining in the Pilliga will extract 1.5 GL water and 13,000 tonnes of toxic salts each year. Contaminate and deplete this resource and the viability of a whole community and its food production is put at risk.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

James & Natalie Tydd

Sent: Monday, 10 August 2020 12:20 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I work in the renewable energy industry and everyday my inbox is inundated with more PROOF that we don't need to build new fossil fuel projects. Gas is not a transitional fuel either. There is no legitimate scientific evidence that gas is 'better' for the environment.

I don't want to see an historic and ecologically precious part of our land torn apart for a resource we don't even actually need anymore!!! And won't need once it's built.

This is just vested interests at their worse. This project doesn't stack up.

As we continue to wreak havoc on this planet, we are losing more and more of our precious tree communities to fires. We can't afford to tear apart land that is still in tact!

Here is some evidence you need to consider:

"The draft 2020 ISP was not kind to gas, with almost every scenario modelled by AEMO (varying with emissions reductions, and how centralised or distributed energy is) featuring little or no fossil gas."

<https://reneweconomy.com.au/aemos-recipe-for-a-cheap-clean-and-reliable-energy-future-34724/>

<https://www.miragenews.com/narrabri-csg-assessment-riddled-with-errors/>

<https://www.argusmedia.com/en/news/2127737-new-gas-power-plants-in-east-australia-unlikely-aemo>

<https://www.theguardian.com/australia-news/2020/jul/30/gas-prices-will-need-to-stay-low-to-compete-with-alternatives-on-renewable-grid-operator-says>

Now, you tell me how you think this project won't negatively impact our environment.

Due to the above evidence I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

We cannot afford to put our precious water supply at risk. This risk is unacceptable as water supply in Australia is a precious resource needed for our farms and our wildlife not for a project that is going to last for 25 years

We are already emitting too much carbon to meet our Paris commitments We should not be adding any emissions for our descendants sake who could hVe to live with the disastrous consequences of global warming.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: No to the Narrabri Coal Seam Gas project

Dear Independent Planning Commission,

Please include my name and submission on your website.

This is my submission regarding the proposed development of the Narrabri coal seam gas reserves.

This country needs a sustainable future for the environment, heritage and community rather than accepts long-term damage to all three for short-term economic profits.

In addition, as illustrated by the recent Rio Tinto operations lip service to indigenous heritage and traditional ownership of country is appalling. This land was and will always be Gamilaraay land. Their care for country should be respected and valued - this is manifestly inadequate in the existing EIS.

There are significant and compelling reasons why the Narrabri gas project should never proceed. Aside from the destruction of Pillaga woodland, there is potential for major direct and indirect impacts on agricultural lands and local waterways/ groundwater.

Gas (as well as coal) represents an out-of-date approach to our meeting our energy needs. We have a duty to our children, and the next generations, to move from fossil fuels to the readily available renewable alternatives. There is no major reason for this gasfield to be exploited aside from the benefit it accrues to limited business interests. It does not, in any way, support the local community through jobs or income that agriculture and the renewable energy industry couldn't provide - and do better.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

A greater part of the proposed project will negatively affect the Wonderful Pilliga Forest a unique and vital part of our environment and home to a few iconic plants and fauna including the Glossy-Black Cockatoo and Pilliga mouse.

It's not good enough to destroy a great part of this for outdated gasfields.

This harmful gas when released into the atmosphere is more harmful than coal.

It should be left in the ground.

Yours sincerely,

Anne McAlpine

Dubbo, New South Wales, 2830, Australia

- And it won't even bring down gas or electricity prices for Aussies!

As a retired Agricultural Scientist who has spent his entire working life on research and management of environmental problems in NSW (for Sydney University, NSW Agriculture, Soil Conservation Service, and Environment Protection Authority), I personally am very concerned about the fracking of gas from many of our farming lands, but particularly from lands within the Artesian Basin. This is a unique resource that cannot be improved if damaged.

Yours sincerely,

Subject: Narrabri Gas Project is a threat to the lives of all Australians

Dear Honourable Commissioners,

My name is Jacqueline Phelps and I am a science and engineering student from Victoria. My father grew up in Wee Waa on cotton farm and many of my family still lives in this region and are integral parts of the agriculture community in the region.

I am strongly opposed to gas projects in the Narrabri region.

The environmental impact assessments are insufficient and overtly biased. Projects such as this that impact so many should not be decided upon my research so heavily influenced by those who economically benefit from the project.

Economic outcomes are not and will never be the most important part of human life. Without a healthy environment, water system and climate no Australians will prosper. Not even those economic stability will survive without healthy water.

As a young scientist I know that science is not objective and is constantly surprising. The environment does not do what we predict. Cane toads have ruined environments, rabbits resisted virus controls we through would work and ocean oil spills show that engineering faults cannot be prevented. The only way to prevent such disasters is not more rigour science but to not meddle in issues of environmental significance.

Money can be made other ways, but this project threatens to much to be upheld. I urge you to listen to those strongly against this gas extraction in Narrabri. Fund agriculture and community developing projects that do not harm the ecological systems upon which we rely.

Please coloniser the ramifications of your actions, Thank you for taking the time to read my submission.

Kind regards,
Jacqueline Phelps

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

TEN MYTHS OF FRACKING

1. Fracking can be safe.

Nowhere in the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory (the Pepper Report) is it claimed that fracking is 'safe'! Instead the Report speaks only of 'reducing the risk' and 'minimising the risk'.

2. The challenges and risks associated with any onshore shale gas industry are manageable.

To 'manage' the defined risks of hydraulic mining requires the rigorous implementation of 135 stringent recommendations. Does anyone seriously believe that any state government has the capacity, will, and financial resources to implement 135 stringent recommendations? Where in Australia do we see the rigorous

implementation of stringent regulations? McArthur River Mine in the NT is a relevant example of the abject failure of 'best practice' and government supervision.

3. Thirty years of safe drilling for gas proves fracking is safe.

The technology involved in horizontal shale fracking is dramatically different from the vertical drilling of historical mines. Fracking involves drilling a well underground and pumping large amounts of water, sand and chemicals into the ground under high pressure to crack gas-bearing rock formations and force gas to flow to the surface.

4. Gas is a good transition fuel from coal to renewable sources of energy.

Although gas emits considerably less CO₂ than coal, the unforeseen speed of the development of renewable energy and its rapidly reducing costs have dramatically weakened the attraction of gas as a transition fuel. Not only does gas require an extended period of costly development and supporting infrastructure, but the most recent research is revealing its dangerous level of methane emissions.

5. Gas is a clean form of energy.

A major new study has shown that emissions from gas, now being mapped by satellites wheeling 600 kilometres above earth, far from being clean, are 25 to 30 per cent higher than previously understood. On a twenty year time frame, a molecule of methane is 86 times more effective at trapping heat in the atmosphere than a molecule of carbon. If gas leaks more than a rate of 3 per cent it is worse than coal. Consequently gas is a serious contributor to tipping the planet to upper projections of disastrous warming.

6. Jobs, jobs, jobs. Fracking will increase much needed employment.

The development of fracking is frequently promoted as a source of employment, however gas projects are capital intensive, not labour intensive. Employment predictions for the fracking industry are notoriously over-inflated and unreliable. While job opportunities peak in the construction stage, long term job numbers pale in comparison with the service industries, hospitality, tourism, agriculture education and professional services. In addition many of the skill sets will be sourced from other jurisdictions, and as with Inpex, it is a highly mobile workforce not of lasting benefit to the Territory.

7. Fracking will overcome NSW's economic problems.

Despite the Prime Minister's belief that Australia's recovery will be driven by gas, all the economic evidence points to the reverse. Big energy has been downgrading oil and gas to avoid being left with stranded assets as worldwide gas prices fall and companies divest of fossil fuels as renewable energy sources multiply and continue to reduce in cost. Further tipping the scales against fracking is that it demands massive subsidies from the taxpayer - the NT Government has already expended \$94 million.

8. Fracking is acceptable because the resulting emissions are credited to the countries to which our gas is exported, not to Australia's pollution score.

Australian governments continue to prop up the coal and natural gas sectors with fee waivers, fast tracked projects and direct investments, further entrenching Australia's position as the third largest exporter of fossil fuels in the world. Why does this matter? Apart from its questionable morality, contributing to the rapid increase in global temperatures is self-defeating, because Australia is one of the countries most vulnerable to increasing climate disasters, for example

higher temperatures, stresses on human health, declining biodiversity including the loss of the Great Barrier Reef, more frequent and severe droughts and bushfires, reduced rainfall, rising sea levels causing coastal erosion, and property loss, extreme destructive weather events, problems with agriculture, an influx of refugees from sinking Pacific Islands, invasions of new pest species, reduced rainfall putting pressure on water supply.

9. The community supports the Government's decision to lift the moratorium and forge ahead with fracking.

The consistent result of the polling demonstrates that the majority of Australians are opposed to fracking.

10. Fracking will advance NSW 'moving forward'.

Moving forward or moving backward? The professional Inquiry into Hydraulic Fracturing in the Northern Territory comprehensively examined the risks to water, land, air, public health, Aboriginal people and their culture, social impacts, economic aspects, land access and the regulatory reform that would be required for the 135 stringent regulations to be rigorously enforced to minimise the risks of fracking. Subsequently the economic negatives of fracking have been exacerbated by alarming scientific research on methane emissions and the rapidity of the planet's increasing temperature in particular from fossil fuels. In the light of the many problems of fracking, and the declining world acceptance of and investment in the gas industry, not to mention the demonstrated absence of social consent so important in a democratic society, any newly elected government would be wise to cut its losses and abandon fracking.

Please move NSW into the twenty-first century!

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gas field in the Pilliga forest.

The threat to the groundwater aquifers that local farmers rely on to grow food for all Australia alone should be enough to stop this project. This is the driest inhabited continent on Earth. Water is more precious than gas, that, let's face it, can be generated from any compost pile or tip and is escaping the melting permafrost of Siberia in unprecedented quantities thanks to the warming of the planet that burning the very gas that you are wanting to exploit, is causing.

This area is a food bowl of such great importance to this country that no industry or mining that threatens its productivity should be allowed by law.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

From: Brigitta Summers <campaigns@good.do>
Sent: Monday, 10 August 2020 10:19 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

My name is Brigitta Summers and I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I have lived in NSW my whole life and over that time I have seen protections for the environment and biodiversity, and care and respect for Aboriginal connection to country be repeatedly taken away. Most recently the logging of unburnt Styx Forest after the bush fires. It is simply not acceptable to allow the Narrabri Gas Project to go ahead, knowing what we do both about the forest's importance to the local Gamilaraay people and its importance to the endangered Pilliga Mouse, Regent honeyeater, Squirrel Glider and Black-striped Wallaby.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding "areas of high cultural heritage value to local Aboriginal groups" fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

The Assessment Report states "the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region." However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Brigitta Summers

Sent: Monday, 10 August 2020 10:17 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I live on a farm in regional NSW and know too well the critical importance of water and habitat, especially during the prolonged drought in recent years which we are still recovering from. The potential risk to farmers water supply and the natural environment of the Pilliga forest from this project are too great to risk. Once the water table is impacted by fracking there is no turning back and people's livelihoods and farmlands are ruined forever.

It also seems clear that at present we have an oversupply of gas in Australia (Bruce Robertson SMH 24/7/20 'We Sponsor A Failing Gas Industry') and this project is unnecessary, especially with the burgeoning expansion of renewable energy projects currently occurring in Regional NSW, which is regarded as a growth centre for renewable energy projects by the State Government. This further negates the need for a destructive environmental project as the Narrabri gas project.

I also am concerned following recent reportage that the principal company behind the project, Santos, has taken '...heavy write-downs on the value of its assets, flagging a hit of up to \$1.1 billion as Coronavirus drains demand for energy' (SMH 22/7/20 'Santos takes \$1.1b knock as COVID-19 kills oil demand' by Nick Toscano). If, as reportage such as this is indicating, the current and long-term impacts of COVID-19 are greatly reducing the demand for energy like gas, and Santos are already experiencing drastic economic losses as a result, then it appears prudent to prevent this project as a matter of urgency.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment which is greatly appreciated. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Jenny Barry

I strongly urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Julie Morton

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As a Gomeri custodian and TO of Gomeri land I seriously urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

As a custodian I will never give my approval to any project that will jepodise our water supply which Santos already has-methane has been discovered in our water supply already. We cannot take the risk at all.

I cannot approve a project where Gomeri people will be required to seek out permission with Santos and be supervised by Santos when conducting cultural business on the grounds they have selected to force themselves in on.

This area has always been the Gomeri murri training grounds which we have defended since time began this will continue to protect the water supply of our future generations.

I cannot support and will not support a company who allows land council to suspend me as a member because I disapprove business with Santos. To do so has disconnected me from information provision vitally needed to make an informed decision for my families future. This has ocured and does impede on decision making.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

This project has decided not only the Narrabri community but northwest NSW community members with 98% of us opposing Santos leaving the 2% without a social license to operate. The 2% have been outvoted and this project will remain unwanted and therefore should leave our communities especially Gomeri communities

As a Gomeri custodian and lore holder over our water supply Santos will NEVER get my support for ANY reason.

Yours sincerely,

Deborah Briggs

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

I cannot, for the life of me, understand why in this day and age, with the very real threat and impact of climate change literally on our doorstep, why there is a continued investment in fossil fuels. It doesn't make environmental, nor economic sense. For a political party that spruiks its prowess as "good economic managers", the continued divestment from fossil fuels by major banks and investment funds would indicate this is not a prudent economic choice.

Please do not support this project, not other fossil fuel projects.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

I have personally been affected by CSG exploration by AGL in the Gloucester Valley. It is not an experience anybody should have to go through. CSG is a dirty and destroying industry. It affects negatively on the people, the towns nearby and has huge negative effects on the environment. I would suggest that Santos is mainly guessing about what would happen if this project goes ahead.

The age of fossil fuels has passed. DO NOT APPROVE THIS NARRABRI CSG PROJECT.

Sent: Monday, 10 August 2020 9:40 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a brief submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am making this submission on behalf of my (and everyone's) children, grandchildren and others who may come after, and their future on this land.

Water is both an absolute necessity for life and extremely precious in this, the biggest desert continent on the planet. I believe that opening up the Pilliga to CSG mining has the potential, through fracking, to completely sterilise the precious Pilliga forest as a catchment for the artesian water supply underneath and to contaminate that very precious (artesian) water system which supplies water to so much of the farming in the eastern part of this country.

I believe that the well-documented significant damage that CSG mining has on the environment, and the ongoing risks to the climate from an energy source that according to all reports is not even used in this country and is largely exported, is a burden on the future that we have no right to agree to - especially when far less damaging clean-energy alternatives are available.

Due to the above reasons, and many more that time constraints have not allowed me to document and cite, I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Pilliga environment does not need to be destroyed as an area of important bio diversity by the 850 coal seam gas wells, power lines, roads and othe infrastructure just as the world is facing human and climate crisis.... we don't know yet where changes to our energy production might lead through sustainable energy developments and to destroy yet another ecosystem in a rush when the whole energy sector will be undergoing unbelievable positive change for sustainability is, i think, irresponsible and irreparable .

PLEASE do not proceed with this development, let's see what else the future holds before decimating this precious environment..

The impact on this land for the gameroi people, which i can't explain as well as they MUST be a consideration to you...

The impact on greenhouse gas emissions of nearly 1 million tonnes a year is crazy in the present era...ESPECIALLY when there are possible energy alternatives which we, in australia, could be world leaders in, such as solar/wind energy being converted to green hydrogen...a highly exportable product...and i'm sure there are other brilliant solutions i don't even know about.

I have just read it will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers... A risk to water supplies that this continent simply cannot nor should suffer. Water in the predicted climate change future is going to be one of the MOST important resources we have,

I cant help thinking this rush to develop coal seam gas fields in our beautiful, complex and unique land is another case of exploitation by multi national companies which DO NOT have the best interests of australians, environment or even our planet in their considerations at all... its for profit for their owners and shareholders, not the good of society and the world. The latter are more important to me than profits.

According to my information this development would not even bring down gas or electricity prices for Aussies! So there's no economic benefit in it for society...

NOW is NOT the time to be supporting a development like this, please do not allow this development to proceed.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: I am a Tamworth resident of 25 years, a Registered Nurse, parent and grandparent.

The environmental eyesore, destruction and release of gas is obscene, in context of our planet's dangerous changes.

EDIT HERE: The money made goes mostly overseas, and domestic consumers do not benefit. The holes driven through the Great Artesian Basin are there forever, and mistakes which destroy the Basin's water WILL happen. Renewable energy is fast becoming more productive and profitable, making fracking and other non renewables a losing business game. All scientific studies demonstrate fracking's poor business and environmental results.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Australians!

Yours sincerely,

Jessica Donovan

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- the recent announcements by WFI & another insurer that they would no longer provide insurance cover for farmers with CSG gas infrastructure on their land means that approval for this project would leave farmers holding the risk for the risks Santos and its CSG project inflict upon them in addition to all the others negative impacts this project has for farming businesses. There is no equity in this

- Flaring of the proposed gas wells introduces an unacceptable risk of sparking fire in the Pilliga.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies! The representative for the Department of Planning, Industry & Environment in his presentation to the IPC confirmed that the gas price would not come down, contradicting Santos' assertions.

Yours sincerely,

John Russell

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I've been living and working the last 58 yrs around this country I think its clear we have been destroying forests and animal habit for 100s of years , Australia is a great country and we have prospered off the land over this time but at an elevated rate with advance technology we are hurting our land and fauna and we need to slow down and show some care and respect for what a great place Australia is. Its clear in the science that we are wrecking IT. So Back Off gas project

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I strongly disagree at to the Narrabri gasfield in the Pilliga and urge you to reject all Santos' proposals to develop.

The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources. Within the area for development are recognised significant sites for First Nations people.

Given the known significance and biodiversity of this area, Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

The risks to the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers is not negotiable. Toxicity of this industry is well documented and uncontrolled. Water security should not be negotiable.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

There is no evidence that it will bring down gas or electricity prices for Australia, or provide ongoing employment as is often sighted as a positive.

I draw your attention to the developments of gas fields in Queensland and the social and environmental impacts that have eventuated. I have visited landowners near Chinchilla who first thought the "injection" of money into the community would potentially be positive. They have a very different story now of division in community, degradation of land and surface water.

Stop this disasterous proposal now. Listen to the constituents

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

It's time to take a stand and protect what is of true value, while we still can. It's time to look after this precious earth, rather than the interests of business.

We rely on the earth for clean water, air, our food- for all that sustains us. We have a duty to look after and protect it, not just with words, but genuine, sincere action.

The way we have been using the resources of the environment is simply unsustainable.

The damage done by this project will be irreversible. To pretend otherwise is wishful thinking and denial.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

We can no longer afford to put business and profit over the health of the earth.

I ask you to reject this proposal, to take a stand and be a part of the changes that we must make-for the environment and future generations.

Yours sincerely,

Subject: Submission: Objection the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. This development is a disaster for a important piece of wild country.

It no longer even makes economical sense, the price of gas is too much to be affordable for users (in comparison to other options) and too cheap to return on investment made by Santos (without being subsidised by the people of Australia.

Which brings me to an important point: plainly I do not live in the Pilliga, so what gives me the right to object to this development? I believe as a citizen of Australia I have the following grounds to object to this development:

1. Impact to the ground water, plainly the artesian basin is vast and a collective resource.
2. Increased GHG emissions as a country. The cost of this will be shared to all citizens of the country (and indeed the world)
3. Cost to the tax payer in direct and indirect subsidies to this project. There are plenty of more efficient ways for the taxpayer to subsidise creation of jobs. This is plainly bourne by the taxpayers of Australia.

To: IPCN Enquiries Mailbox
Subject: Submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

{Suzanne } {Fraser},

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

We must start taking positive decisions for our future, not damaging one. This project has too many down sides and simply risks too much.

To: IPCN Enquiries Mailbox
Subject: Submission Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I OBJECT to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Stephanie and I am writing this submission to ensure that this beautiful yet delicate countryside is preserved for future generations. Climate change is one of the greatest challenges of our time. One day I would like to have children. I do not want my children,

and their children, to pay the price and face the devastation of climate change when we could have tackled the problem today. Our governments must act now. Australia must invest heavily in renewable power sources and stop all fossil fuel mining immediately. The cancellation of the Narrabri Gas Project would be a good first step in this direction. The preservation of The Pilliga, its biosphere and flora and fauna would further our effort to combat climate change.

The Aboriginal heritage in The Pilliga has not been adequately assessed. Santos has failed to obtain consent. The approach taken by Santos is to site its facilities with the intention of avoiding "areas of high cultural heritage value to local Aboriginal groups" but fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture. Following the recent debacle by Rio Tinto when it destroyed two sacred sites in Juukan Gorge in the Hamersley Ranges, Western Australia, in a blast to expand the Brockman 4 iron ore mine is one example of the corporate disregard for Aboriginal heritage presently held by many companies in this country. One cave showed 46,000 years of continual occupation and provided a 4,000-year-old genetic link to its present-day traditional owners. The site was of significant archaeological value. Across Australia fossil fuel companies are seeking permission to d

estroy sacred Aboriginal sites to make way for mining operations. These companies show how little regard they have for Aboriginal culture. It is important to remember: Aboriginal Lives Matter. Aboriginal Heritage Matters. And Aboriginal Heritage is Australian Heritage. The Assessment Report shows little respect for Aboriginal heritage at this site. Santos shows little regard for what The Pilliga means to the Gamilaraay people, only their profit margins matter. The Narrabri Gas Project must be cancelled.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project. This is set to be 117 tonnes or two B-double trucks of salts waste every day during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate the groundwater and surrounding farmlands and ecosystems.

The Narrabri Gas Project represents a dangerous long term threat to the Australian climate and to our unique wildlife and flora.

Due to the above reasons I strongly object to the Narrabri Gas Project. The negative impact of this project vastly outweighs any perceived economic benefits. The loss on so many levels caused by coal seam gas mining, of irreplaceable habitats, native flora and fauna and indigenous cultures makes it clear to me that this project should not go ahead.

You can include my name and submission on your website.

Thank you for this opportunity to comment. I look forward to hearing from you in regards to this submission.

For the only planet we have.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Fracking destroys aquifers and poisons surface water and soil. It takes 3 to 5 million litres of precious fresh water to frack one well. The waste water is highly saline, contains radioactive materials, and is contaminated by BTEX. It is unacceptable to allow the Pilliga or anywhere, to be ruined for short term profits for a foreign owned gas company that will sell the gas overseas. The wells also produce greenhouse gas pollution including leaked methane, accelerating climate change events such as the devastating bushfires we just experienced.

Do not allow this to go ahead.

Yours sincerely,

Trevor McCarron

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. Santos calculations in regards to its minimal impact on the environment is questionable at best and strongly disputed by scientists in this field.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Subject: Submission: I object to the Narrabri gas project

Submission to the Independent Planning Commission

Narrabri Gas Project

Dear Commissioners,

Thank you for this opportunity to comment on Santos' proposed gas field in the Pilliga forest, near Narrabri.

I object to this proposal, in line with the advice of the many scientists and other researchers who have made submissions and addressed your hearings into the plans.

Climate change

Climate scientists around the world have made it abundantly clear that we must cut greenhouse gas emissions if we are to avoid the worst effects of climate change. Developing new gas fields is completely counter to that imperative.

These experts, including the Australian National University's Will Steffen, are already discussing not only widespread climate change, sea level rise, habitat and species loss, but the likelihood of civilisation collapse as a result of increasing carbon and methane emissions. (See <https://www.resilience.org/stories/2020-06-08/collapse-of-civilisation-is-the-most-likely-outcome-top-climate-scientists/>)

In this scenario, we cannot justify increasing Australia's greenhouse gas emissions – let alone by the nearly 1 million tonnes every year that the proposed Santos gas field would produce and especially at a time when Australia is committed to cutting emissions. NSW should not support this dirty old technology.

Gas supply

The company claims it could provide up to 200 terajoules of gas a day for domestic use for 20 years, equivalent to 50 per cent of NSW demand. And Business NSW warns the development is needed to secure gas supply. It has been widely quoted as saying that without it, "supply will just about disappear, costs will soar and businesses will be forced to close, meaning even more jobs will be lost in NSW". (See eg <https://www.smh.com.au/national/nsw/santos-gets-nsw-government-nod-for-3-6b-csg-project-20200612-p551w8.html>)

However, Australia has ample gas to supply the domestic market. What has made prices for local industry and homes exorbitant is the unregulated export of gas overseas - controlled by a small cartel of producers. (See <https://theconversation.com/australia-has-plenty-of-gas-but-our-bills-are-ridiculous-the-market-is-broken-125130>)

Economics

In fact, industry analysts are saying we do not need more gas and that there is “a gas-fired depression around the globe” with the number of operating drill rigs having fallen 73 per cent over the last year. (See <https://www.smh.com.au/environment/climate-change/australia-is-sponsoring-a-failing-gas-industry-20200723-p55ew6.html>)

Gas/LNG financial analyst Bruce Robertson says that even Santos has written down close to \$8 billion since 2014 – with a further \$950 million from its failed Coal Seam Gas to Liquefied Natural investments in Australia last month.

Instead, during this time of economic hardship, we should concentrate on investing in our abundant and renewable energy resources to transform our economy and drive it out of the Covid-19 induced recession.

Environmental risks

Other serious environmental threats must also be considered. The vast amounts of water required for the project are insupportable in Australia’s dry conditions, placing Santos in competition with the nearby farming community that grows our food. The cap of 37.5 billion litres over the project’s life (which averages out to 4 million litres a day) is a phenomenal amount and farmers fear that their water supplies may be at risk in the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

(See <https://www.echo.net.au/2020/07/are-the-nsw-planning-department-doing-their-job-over-csg/>)

Additionally, 13,000 tonnes of toxic salts will be extracted from the water every year, with the potential of contamination to groundwater from this waste and potential failure of coal seam gas well containment. Groundwater modelling consultant Dr Kevin Hayley, of Groundwater Solutions, presented evidence at the IPC hearings that Santos “had not given proper weight to the uncertainty of the modelling and that unacceptable impacts to groundwater couldn't be ruled out”. (See <https://www.afr.com/companies/energy/narrabri-gas-opponents-heartened-by-dig-into-water-risks-20200727-p55fqf>)

Another researcher, Dr Matthew Currell, associate professor in engineering at RMIT, also warned about a lack of data from Santos on this issue and of "high stakes consequences" if wells leaked. Major geological structures in the area could enable gas and water flows, creating the risk of cross-contamination and leakage, he said.

How Santos would manage the salt waste from the project also remains a major issue. Environmental engineer Professor Stuart Khan, from UNSW, warned there are no guidelines for disposal of this waste - and heavy metals and other contaminants from it could leach out and pollute land and water. (see See <https://www.afr.com/companies/energy/narrabri-gas-opponents-heartened-by-dig-into-water-risks-20200727-p55fqf>)

Biodiversity

The Pilliga is a place of outstanding conservation significance. The largest remaining temperate woodland in eastern Australia, it is an important area for birds, including the largest NSW population of Barking Owls, the critically endangered Regent Honeyeater, and critically endangered Swift Parrot. Koalas, regarded as vulnerable and of which as many as 25,000 are estimated to have died during last summer's bushfires, are also known to have lived in the Pilliga in the past. However, clearing and fragmentation of land for the Narrabri gas project would place further pressure on these populations. (See <https://www.nature.org.au/media/1447/pilliga-iconsunderthreat-2012.pdf>)

Fire risks

Meanwhile, firefighters with extensive experience working in the Pilliga Forest have condemned the risks to workers at the site and surrounding properties – due to continuing operations of gas flares even during catastrophic fire conditions. (See <https://www.theguardian.com/environment/2018/mar/21/narrabri-gas-project-fire-risk-unacceptable-firefighters-say>)

Health risks

Australia's most distinguished medical professors are also warning that serious health impacts from coal seam gas, revealed in recent research, are being ignored. "Harm to the health of the local community – including lower birth weight babies and contamination from an array of chemicals used in drilling and hydraulic fracturing, released into the environment through airborne emissions and wastewater, as well as industrial activity, are not being addressed," a paper by the professors says.

(See <https://www.dea.org.au/wp-content/uploads/2018/12/DEA-Oil-and-Gas-final-28-11-18.pdf>)

Risk to Siding Springs Observatory Operations

Siding Springs Observatory, Australia's national facility for optical astronomy located in the Warrumbungles not far from the Pilliga, could be forced to shut down. With 20 telescopes operated by the Australian National University, the area is internationally recognised as a "dark sky park". However, Santos' gas field plan would place the observatory's operations at risk due to light and dust pollution. (See <https://www.theguardian.com/science/2014/oct/21/siding-spring-observatory-threat-coal-seam-gas-light-pollution> and <https://majorprojects.planningportal.nsw.gov.au/prweb/PRRestService/mp/01/getContent?AttachRef=SSD-6456%2120200611T024332.341%20GMT>)

Gamilaraay objections

Finally, but perhaps most significantly, the traditional owners of the Pilliga, the Gamilaraay (Kamilaroi/Gomeri) people, whose Dreamtime stories link them to the Great Artesian Basin and Pilliga, are opposed to this

industrialisation of their land. The area has a wealth of heritage sites, including rock shelters, burials, grinding grooves and scarred trees. The Gamilaraay are concerned about ongoing destruction of their sacred sites, the continuing risk of spillages that have occurred associated with CSG in the Pilliga and the likely loss of endangered species from the area. (See <https://www.sbs.com.au/language/english/audio/pilliga-bushland-under-threat-of-mining>)

The reaction to the recent blasting of culturally-significant rock shelters at Juukan Gorge by Rio Tinto should be a warning to the NSW government and mining companies about the public's attitude to the desecration of First Nations people's cultural and environmental heritage – with the sweet waters of the aquifers of particular importance to the Gamilaraay.

Conclusion

In conclusion, I hope you will heed the advice of yet another scientist, Dr John Williams - a founding member of the Wentworth Group of Concerned Scientists, former head of CSIRO's Land and Water division, a New South Wales Land and Environment Commissioner and currently an emeritus professor and research associate at the Australian National University – who says that Santos' proposed gas field in the Pilliga forest is not worth the risk.

"I think the risk to our vegetation and habitat, the risk to our agricultural land and the risk to our water resources is such that I don't think we are in a position, in my view, to say there is no risk to any of that," Dr Williams told the ABC on August 8. (See <https://www.abc.net.au/news/2020-08-08/scientist-says-risks-too-high-for-coal-seam-gas-in-narrabri/12530152>)

Subject: Narrabri gas project Submission

Dear Commissioners,

I am writing to ask that you do not approve the proposed Narrabri gasfield in the Pilliga forest.

I oppose this project because it represents a threat to the environment, including water resources, and because it does not make sense to pursue further gas mining, with all the attendant risks, when research has clearly shown 100% renewable energy is possible for Australia by 2030.

As the shift to renewables offers such great opportunity for Australia economically, pursuing another fossil fuel project will lock us into, not only more expensive energy, but also dead end jobs.

I thoroughly support all the points made by Lock the Gate below.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Kasia, I'm a parent and a student of Environmental Science and Management at the University of Newcastle, NSW. I'm making this submission because I believe Coal Seam Gas exploration and mining in the Pilliga Forest is unnecessary and dangerous. It is unnecessary because we do not need more gas due to available renewable resources and technology. It is also dangerous, as evidenced by the negative health impacts on humans and non-human ecosystems seen in other CSG field areas elsewhere in Australia and internationally. The toxic impact on underground water systems CSG produces is also a major concern, especially due to Australia's dry climate and an already strained water supply. Water is essential for life, gas isn't.

Last year I took my teenage son to visit the Pilliga Forest for a family weekend. My very first thought upon arrival to the forest was "this is what true Australian bush looks like". I remember the dry fresh air and the sounds of birds and small animals rustling in the leaves and debris. It struck me as a beautiful place that family memories were to be made. On that trip we visited a CSG test well. My son and I saw the open, naked flame burning in the middle of the dry Australian bush. I could hardly believe my eyes and when the worst bush fires ever to hit NSW struck only a few months after that, I could not help but wonder why the government would allow such exposed flames to continue to be legal in such high fire danger zones such as the Pilliga.

Also on this visit we saw a fenced off area of dead and struggling bush close to a CSG wastewater containment pool. Later, the locals informed us that what we had witnessed was where a leak had occurred from the pool some years ago, and despite the owning company putting millions of dollars into land regeneration into this area, there seemed to be nothing they could do to rehabilitate it. I believe the area was still toxic, hence the ten-foot fences still surrounding it. If this was only a "spill", I'd hate to imagine what devastating effect these chemicals are having on the underground ecosystem in the soil beneath the pool, in the wells and underground water systems that the forest and possibly people rely on or may need to rely on in the future. The Pilliga Forest sits upon a major recharge zone for the Great Artesian Basin, if this water is contaminated then inland Australia and it's iconic bushland of this and many other connected areas could face permanent destr

uction with no hope of rehabilitation, regardless of the budget used. To risk this is unfathomable, as I mentioned earlier, water is essential for life, gas is not.

It is for these reasons that I, and my son, strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: OBJECTION to the Narrabri Gas Project Proposal by Santos to extract Coal Seam Gas from 1 million hectares of the Pilliga region of NSW

Dear members of the NSW Independent Planning Commission,

re: Objection to the Santos' Narrabri Gas Project.

You have my permission to include my name and submission on your website.

I am a semi-retired university teacher and scientific researcher, as well as a grandparent. From both these perspectives I have serious concerns that a NSW government adoption of this Santos proposal can only damage the future viability of our country and its impact on world climate change, as well as on our local groundwater supplies, forests, animals and communities.

I object to the extension of the above Coal Seam Gas (CSG) Project because:

* Australia is NOT short of supplies of 'conventional' gas, despite Santos' claims that its proposed project will assist NSW' needs for energy reliability and security! A report from Pegasus Economics in late 2019 demonstrates that NSW has reliable and secure gas supplies for the next 20 years, and that alternative energy development is growing rapidly.

* CSG requires "unconventional" mining, that can only serve to increase the profits of Santos whilst simultaneously. ... (cont.)

* causing many unwanted and toxic side effects detailed below e.g. contamination of crucial groundwater that feeds into the Great Artesian Basin and also supports agriculture, forest habitat, endangered animal species, local communities, and much more. (detailed below)

* Mining operations and surface release or leakage of toxic gases and chemicals brought up from the coal seam, also pose increased bushfire risk and other side effects that will contribute to global warming.

In July, 2020 Greg Mullins an ex Fire Chief reported, on behalf of a group of scientists and other respected professionals who formed the Emergency Leaders for Climate Action, that the findings are clear that there is no more argument re. climate change and emissions from fossil fuels cause this change. He stressed that fossil fuel producers need to be held accountable for national energy disaster, rather than subsidised by Government to expand production of unsustainable energy sources. In toxic mining operations, there are risks from the everyday operations and also from accidents.

Is Santos a company that deserves to be supported to expand?

Santos is a big player in energy exploration and mining in Australia and South East Asia. Unfortunately, it has a record of oil spills and other accidents that have seriously polluted their contextual environments.

The company has been found guilty of breaches of the Occupational Health Safety and Welfare Act because of poor risk assessment of projects and protection of workers.

For example :

* 2004 - Moomba pipeline in SA had a natural gas explosion that was reported by workers to the incident investigation as a 'cowboy operation'.

* In 2008, its Pt Bonython site had an oil spill that released hydrocarbons into the groundwater, which was reported to be still in the process of being cleaned up 4 years later in 2012.

* 2011, in Sidoarjo, Indonesia, Santos mining operations caused so much damage to the earth structure that its outcome was an uncontrolled mud flow that displaced more than 10,000 people, and is still continuing, albeit at a slower rate, 9 years later.

* In 2011 Santos' Pilliga forest CSG project leaked wastewater from a holding pond for the toxic coal seam water pumped up from the gas mining process. 10,000 litres of untreated CSG water leaked hydrocarbons, mercury, various salts and heavy metals. In turn, these have adversely impacted farming and put agriculturalists out of business, which has then undermined the viability of the greater community. In 2016, (5 years later) Santos was still trying to rehabilitate this area.

*. 2013 - Jackson, Qld - Uncontrolled oil spill of 50,000 litres/day that lasted almost 1 week.

*. 2013 - Narrabri NSW groundwater aquifers were contaminated with uranium.

Elevated levels of salinity and heavy metals were found near Santos' Tintfield holding ponds in Pilliga Forest. Also, at Bibblewindi ponds, uranium was found at levels 20x above safe drinking levels.

Consequently is the expansion of further Santos' mining operations, something we want to support?

Mining for CSG requires sinking bores through aquifers of good groundwater, in order to access the coal seam usually 300-500metres below. This is considered to be an 'unconventional' mining technique. Its methods that bore through groundwater storage in the earth and then from the coal seam underneath this good water supply, pump up huge volumes of mostly methane gas and contaminated coal seam water to the surface.

Breaking into the coal seam is achieved through providing reinforced, protective concrete, well casings around the bores that are driven through the groundwater and then into the coal seam layer beneath. Geologists consider that casings safeguard the groundwater. However, well casings commonly erode over time, so toxic coal seam water and gases then contaminate the groundwater. (See incidents reported above)

Furthermore, CSG mining is also often assisted by 'fracking' the coal seam rock to enable more efficient and prolific removal the the CSG. 'Fracking' uses huge quantities of water under pressure to fracture the coal seam rock and push the gases to the surface. The wastewater from fracking is then kept in wastewater ponds that as described above, have already been found to contaminate good quality groundwater. This Santos proposal undertakes not to do fracking for 3 years into the project. However, as it is a 20-25 year proposal, a pledge to be 'fracking' free for just 3 years appears to be a small token to fog the real story. This proposal is clearly a proposal to conduct significant amounts of 'fracking'.

The destruction of deep ground rock by fracking has been reported over time to increase earthquake activity in areas previously not considered to be at risk. eg Oklahoma now records 100 times more earth tremors per year post a few years of fracking from a previous average of approximately 6 per year. Long term damage could seriously impact the integrity of the Great Artesian Basin water supplies in generations to come.

In addition leakage of contaminated water from wastewater ponds into the groundwater aquifers impacts the health of humans, crops and animals.

The Pilliga aquifers are part of the crucial, recharge drainage zone into our Great Artesian Basin (G.A.B.). Protecting groundwater from contamination is absolutely crucial to the survival of plants, animals, indigenous sacred sites and the agricultural and supporting communities across inland Australia. They must be protected.

* The associated infrastructure of CSG mining, creates a network of roads, bore sites, wastewater ponds and pipelines and heavy vehicle traffic that will invade, fragment and contaminate 95,000 hectares of our forests and agricultural land. Farmers in the Pilliga region have reported irresponsible use of their land that they are forced to allow mining access on. Gates are left open, rubbish is often not removed and lorry traffic all contribute to loss of stock, income and quality of rural living.

I apologise for describing a small part of the CSG mining process but it seems that these steps need to be specifically revisited when considering the big picture.

If the NSW Govt. agrees to this Santos' proposal to extend the Narrabri Gas Project is to conduct risky mining, for unneeded, "unconventional" gas.

We cannot afford to destroy any more of our forests than have already been massively cleared and also destroyed by bushfires. Loss of forestation contributes greatly to world climate change that is already hitting almost at the crucial 2 degree Celsius warming tipping point for the Earth.

As a 1st World, supposedly educated nation, we are responsible for protecting 35 endangered animal and bird species that inhabit the Pilliga woodland. These species include the Pilliga Mouse, Black-striped Wallaby, Glossy Black Cockatoo, Regent Honeyeater (which is listed as critically endangered) as well as Koalas, that just last year in 2019 lost 30% of their habitat in the summer bushfires. The Pilliga region contains the largest temperate woodland in NSW. I understand that under the Environmental Protection and Biodiversity Conservation Act, preservation of habitat is the required and crucial first response to any species being listed as vulnerable or threatened for extinction.

The expansion of Santos' existing, unconventional gas mining project when there is no shortage of conventional gas reserves and it poses so many risks to the environment, in particular to the long term integrity of our groundwater, climate, forests and native species, as well as to our indigenous and agricultural communities is unconscionable.

I ask that in considering this Santos proposal that you give full respect to the bigger context of issues and knowledge that will either impact and be impacted by the adoption of this short-sighted project.

We say we are a clever country, but our governments continue to make out-of context, single-focus decisions based on short term financial gains of companies that they say will bring significant employment and economic security.

Santos is the 2nd largest energy producer in Australia, but its website reports it employs just under 2000 people across its various national projects. Its Narrabri application suggests it will employ 1300 during construction but only 200 in the long term, Recent evidence on history of jobs in Queensland gas fields has shown for each job created by CSG mining, that 1.8 jobs have been lost from agriculture and other service industries. On that basis, it is hard to believe that job creation is a valid persuasion point towards acceptance of this proposal.

For all the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussie!

I also feel that before any decision is made there should be a referendum. I myself feel that this year has been the worst since the wars that we have endured and this will have a significant impact on personal lives.

Yours sincerely,

Rhonda Steer

Subject: Submission: Objection to the Narrabri gas project

Dear Commissioners,

As a mother concerned for her child's safe climate future, as a biologist, and as an Australian who understands the value of water and nature, I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The project will drive the destruction of environment, climate, cultural heritage and some of Australia's major water resources.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- Renewable energy is now the cheapest, cleanest way to produce electricity; the Narrabri gas project won't even bring down gas or electricity prices, but will drive climate and environmental destruction.

I strongly urge you to wholly reject the proposal.

Yours sincerely,

Marie Carvolth

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a 70 year old male (retired Science Teacher) who visited the Pilliga forest several times as a young teenager from Sydney. These were my first introductions to the Australian heartland. These interactions with the vastness, the flora, the fauna, established my Australian identity and my attachment to our beautiful land.

If we turn this wild life forested refuge area, of 97,000 HA into an atmosphere polluting, industrialized gas field what are we leaving to the generations of the future, ie my grandchildren?

The liberation of mega-tonnes of carbon into the atmosphere will contribute to the planets global warming crisis and may well produce heat waves in the future which will destroy the food being grown for my grandchildren which will result in their starvation?

My objections are (1) Carbon contamination of the atmosphere,

(2) The chance of further contamination of the Great Artesian Basin aquifer.

The carbon contamination of the atmosphere.

Is it a scientific fact that our planet's atmosphere is heating as a result of the carbon contamination of the earth's atmosphere.

The tapping of the gas fields beneath this forest would liberate mega-tonnes of carbon into the atmosphere, both as (1) propane and methane leaked from the imperfect drill holes, (which recently has been shown to be an enormous problem in the USA) and (2) the carbon dioxide from the burning of the gas as a fuel.

Australia must shoulder its part in reducing carbon emissions, and by not mining this gas we are assisting to achieve this goal.

The possibility of the contamination of the Great Artesian Basin (GAB) aquifer.

The GAB is a vast fresh water resource which lies in sandstone rock formations below the surface of QLD NT, NSW, and SA. It is a major source of fresh water supplying cattle stations, maintaining live stock and irrigation. The pollution by toxic chemicals of the GAB would have negative economic impacts far into the future.

The Pilliga forest lies on land which is a part of the recharge zone of the Great Artesian Basin. If the mining operation involves coal seam gas drilling or hydraulic fracking pollutes the rock deep below the surface, then this can be carried into the GAB aquifer and pollute its waters.

Many people believe that the mining of gas under the Pilliga forest will result in the contamination of the GAB aquifer, largely because this has already happened. The Queensland Gas Company in 2009 contaminated the Springbok aquifer as a result of coal seam gas extraction and fracking, as revealed in the 2011 ABC Four Corners program.

Any mining company can NOT be relied upon to prevent accidents and disasters in the environment that they are mining. They cannot be relied upon to conduct their activities in an environmentally and socially responsible fashion. Mining companies are profit motivated businesses that are primarily responsible to their share holders. Their environmental disasters and intentional mistakes to make more money, include:-

The disaster in PNG between 1984 and 2013 when the collapse of the BHP Ok tedi gold mine dam polluted 1000 Km of the Ok tedi and Fly rivers. The lives of 50,000 people were disrupted.

At Kakadu in the Northern Territory there were a number of leakages of radioactive tailings from the dam of the Rio Tinto Ranger uranium mine from 1995 to 2013. The 500 inhabitant's lives were disrupted. The tailings were leaked into world heritage –listed wetlands in Kakadu National Park.

The BHP Billiton's catastrophic MARIANA dam collapse in Brazil, in 2015 at the Germano iron ore mine, caused the loss of many lives and the destruction of an entire village.

The 2020 destruction of a 46,000 year old aboriginal archeological cave in Western Australia by Rio Tinto. These caves were inhabited before Homo sapiens entered Europe!

All of the above # are the results of mining engineers calculations. These results speak for themselves!!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

John Lindsay

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My family and I have been travelling from Newcastle to the Pilliga Pottery around Easter for 15 years, we have become very close with the people who live there and we have seen the struggles that come along with living in the country. I have also seen the fierce opposition from the locals to this project. If we are to live in a democracy, we can not let private companies walk over the people of this country. 97% of the Narrabri community are against this project, and this should be reason alone. A government is there to represent the best interests of the people, and in allowing this project to go ahead despite the clear and obvious opposition would be a disgrace.

Furthermore, I am of the belief that this project will have devastating environmental effects upon the land surrounding Narrabri. Australian fossil fuel companies have a terrible history with environmental clean-up, and according to Dr. John Williams, former head of CSIRO's Land and Water division, believes this gas project is not worth the risk. ""I think the risk to our vegetation and habitat, the risk to our agricultural land and the risk to our water resources is such that I don't think we are in a position, in my view, to say there is no risk to any of that," he said."

This is not to mention the impact the very utilisation of fossil fuels leading to further climate change, leading to devastating effects on Australia and the world.

Yet again a fossil fuel company has not properly obtained consent from the local Gamilaraay Aboriginal population. The disrespect and reckless abandon with which these companies act on the land of the first nations people is a disgrace.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Oscar Minchinton (a believer of democracy)

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission, You can include my name and submission on your website. This is a submission on the Narrabri Gas Project. I strongly object to the proposal by Santos to develop a CSG project at Narrabri, NSW. The reasons this project must not proceed include negative impacts on water, agricultural land, social cohesion, cultural significance and biodiversity of this area as well as the carbon emissions that would be associated with the project. In 2014, the Chief Scientist made 16 recommendations to guard against risks of the coal seam gas industry. Half of the recommendations have not been implemented at all. Only 2/16 have been fully implemented. Santos plans to divide their proposed project into 'phases'. Despite having already drilled 69 wells, they plan to label the first phase - involving drilling another 25 of the proposed 850 wells - 'exploration and appraisal'. All the 'phases', regardless of the terminology used for them, involve unacceptable risk and should be refused. The water Santos plans to remove is too precious a resource to lose. Santos plans to extract 37.5 billion litres of water from the Pilliga Sandstone over 20 years. The Pilliga Sandstone is the southern recharge of our Great Artesian Basin. Not only is this unacceptable in itself, but too little is known about deep aquifers to allow this 'experiment' to proceed. The Great Artesian Basin must be protected. The project will cause depressurisation and loss of water in the Pilliga Sandstone. The modelling used by Santos has been described by the government's own water agency as highly inaccurate. (DPIE Water "Advice on Supplementary RTS" August 2019) and the Department of Planning's Water Expert Panel said it was concerned the model "may have poor predictive capacity in relation to the impact of production of the surrounding impacted water sources." (Water Expert Panel Advice. Appendix G, Assessment Report on the Narrabri Gas Project.) The Department of Planning claims that there would be "no significant impact" on the Great Artesian Basin, but there is nowhere near enough information to make this claim. It is unclear how Santos would be held responsible for claims against them and for clean up of this operation. The industry is apparently uninsurable and there is no mention of the NSW EPA's requirement for clean up funds in the draft consent prepared by the department. Treatment of water brought up from underground would produce up to 840,000 tonnes of solid salt waste, laced with heavy metals, which would need to be disposed of. How and where would this occur? There appears to be no actual plan for disposal and it seems the NSW government is happy to proceed with approval and hope that Santos finds a satisfactory solution later. This seems negligent and reckless. Coal seam gas brings upheaval and division to rural communities. In southern Queensland, a CSIRO survey in 2014 found that only 6% of local people living in gasfield areas thought that the industry had improved their lives. In comparison, 42% said that they were "not coping" or "only just coping" with the changes the industry had made to their lives. (Walton, A., McCrea, R. and Leonard, R. (2014). CSIRO survey of community wellbeing and responding to change: Western Downs region in Queensland. CSIRO Technical report: CSIRO, Australia. <https://gisera.csiro.au/wp-content/uploads/2018/03/Social-2-Final-Report.pdf>). I do not believe this is what we want or need for our communities. There would undoubtedly be negative effects on housing affordability for renters in the area. This would disproportionately affect indigenous residents. The number of jobs created by the project would likely be dwarfed by the number of jobs lost in agricultural and other sectors and by those who leave the area. During the construction period, the presence of a predominately male non-resident workforce would change the gender balance in the community. This "masculinisation" has been observed to have negative social consequences in other communities with a FIFO mining workforce. It is my belief that we are yet to understand the full impact of this social manipulation. The Pilliga is a hugely significant area for Gomerai people. No detailed new surveying of the area for Aboriginal cultural heritage has taken place yet. Santos proposed to undertake detailed surveys after it gets approval and avoid newly found sites of high significance, but this is a highly risky strategy and once granted, the approval would not be able to be revoked. The Pilliga is the largest temperate woodland in eastern Australia and Santos proposes to industrialise 95,000 hectares of it, clearing close to 1,000 hectares in small patches and connecting lines, including removal of several endangered ecological communities. Based on only small limited surveys, 10 threatened plants and 35 threatened animals have been identified in the gasfield area, including pygmy possums, koalas and the Pilliga mouse. The Pilliga once hosted one of the most important koala populations in New South Wales, but the species is now on an extinction trajectory in the area. With so much habitat and lives lost to recent bushfires, it is crucial to the survival of the koala that its bushland habitats be spared industrialisation. The RFS has repeatedly

expressed serious concerns about the operation of a gasfield and its burning flares in a highly flammable landscape like the Pilliga. Have we learnt nothing from our horrific 2019/2020 bushfires?The assessment estimated the likelihood of a loss of containment in the gasfield creating a fire in the Pilliga was once in 70 years. That equates to a 35% chance during the life of the gasfield. This level of risk is unacceptable. If this level of risk was posed by another industry it would not be allowed to proceed.The National Industrial Chemicals Notification and Assessment Scheme (NICNAS) conducted a National assessment of chemicals associated with coal seam gas extraction in Australia found that 48 of 113 chemicals used in coal seam gas operations could harm the health of workers in the CSG industry that come into contact with harmful quantities of them in mixing or blending chemicals to produce formulations, or in the event of an industrial accident.They found that 11 of 21 chemicals used for drilling were of a potential concern for public health following a bulk spill during transport.(NICNAS National assessment of chemicals associated with coal seam gas extraction in Australia. Technical report number 13: Human health risks.)There have already been more than 20 leaks and spills from coal seam gas activity in the Pilliga. At the headwaters of the ancient groundwater of the Great Artesian Basin, we can't take the risk of chemical or salt leakage, accidents and spills.Total greenhouse gas emissions produced by the project could be 127.8 million tonnes of carbon dioxide equivalent, or 5 million tonnes a year. We need to be decreasing, not increasing, our carbon emissions.Bizarrely, the Department describes this addition of greenhouse gases to the atmosphere as "driving down NSW GHG emissions and working towards a low carbon future."Globally, the UN Environment Program's Production Gap Report in 2019 found that, "With average lifetimes of 20 years or longer for pipelines, terminals, wells, and platforms, the time to begin planning for a wind-down of gas production is, as with other fossil fuels, already upon us."Their report found that to achieve the Paris Climate Agreement goal of keeping average global warming well below 2 degrees, global gas production needs to peak by 2030 and decline after that. To meet the safer 1.5 degrees warming limit, gas production needs to peak this year.(UNEP, The Production Gap Report. 2019.)This proposed project is unsafe and there are many associated uncertainties which the NSW government seems prepared to gloss over. The hazards associated with this dangerous project make it an unacceptable risk. This is a submission on the Narrabri Gas Project.

I write this submission as a parent that is concerned about the kind of planet we will be leaving our children and future generations. On this note, I strongly object to the proposed Narrabri Gas Project due to the irreparable impact this project will have on the Pilliga State Forest; the unacceptable risk it poses to one of our greatest water resources, the Great Artesian Basin; and last but not least, the dangerously high levels of greenhouse gases – namely, methane and carbon dioxide – that this project will emit into the atmosphere, at a time when we urgently need to REDUCE and not increase our use of these gases.

This submission consists of three main areas of focus, these being: the impact the Narrabri Gas Project will have on the Pilliga State Forest; the risk it poses to the Great Artesian Basin; and the contribution it will make towards increasing global warming and climate change.

The Pilliga State Forest

No matter how much effort is directed towards limiting the risks associated with fracking, its harmful effects lead to the eventual death and destruction of the environments within which these projects operate. This industry has left a trail of destruction wherever it operates: farmlands are rendered unproductive; valuable water resources are left contaminated; surrounding areas of nature eventually die off due to the contamination of land and soil; precious wildlife habitats are lost; and both humans and native wildlife suffer the catastrophic consequences of exposure to dangerous and toxic gases and chemicals.

In light of the devastating and unprecedented bushfire season we experienced this past year, it astounds me that the NSW Government would even countenance reversing the ban on CSG projects in the state, and it is gobsmacking that they plan to allow such a project to be undertaken in our state's largest nature reserve, given the degree of natural habitat loss within the state during the bushfires. To quote the government's own words "the Pilliga project area protects a vital piece of habitat for Australia's threatened species. Already a refuge for a suite of wildlife that is declining elsewhere, the Pilliga project area will also host the reintroductions of at least six mammals that have been locally extinct for over a century".

It is impossible to overstate the important role the Pilliga Forest plays in the survival of threatened and endangered species. We need to be protecting this forest, not opening it up to CSG operations. Apart from the destructive and irreversible impacts this project will have on the forest and its inhabitants, what would happen to the CSG wells if there was a bushfire in the forest? They would blow up in an explosion and it would be an unimaginable disaster. Given the fact that the era of megafires is already upon us, it is irresponsible in the highest regard for the government to seek to add CSG projects into an area that is already vulnerable to experiencing a bushfire. How would the RFS fight a fire in an area that is scattered with CSG wells? How long would the fire burn once the wells have been damaged by a bushfire? Would we even be able to extinguish such a fire? What kind of chance would wildlife have to escape such a fire, let alone the extra risks posed to surround

ing communities?

In the future, I want my daughter and grandchildren to have the opportunity to experience the wonder and beauty of the Pilliga State Forest, as it stands today. Not a diminished and degraded forest scattered with abandoned CSG wells, or worse, an area of scorched land from one of this nation's worse disasters.

The Great Artesian Basin

Given that Australia is the driest continent on earth, and that we are already experiencing the worsening effects that climate change is having on drought and water scarcity in our state, we should be taking every action possible to protect our greatest inland water resource, the Great Artesian Basin. Any action taken that poses even a minor risk of contamination to this valuable water source is unacceptable.

Furthermore, CSG projects need access exorbitantly large reservoirs of water for their operations, which will place increased pressure on local water resources, at a time when they are experiencing one of the worst droughts in living memory. Farmers and local communities should not be forced into a situation where they have to compete with a water hungry CSG operation in order to gain access to valuable water resources. Allowing this project to go ahead will be placing short-term profits over the long-term sustainability of communities that rely on the Great Artesian Basin for their survival.

Moreover, the Great Artesian Basin is sacred to the traditional land owners, the Gomeri people. Only today I signed a petition by Polly Cutmore, a Gomeri Traditional Owner who is opposing the Narrabi Gas Project. Free, prior and informed consent is a legal requirement for this project to go ahead, and it is clear that Santos does not have the free, prior and informed consent from traditional land owners for the Narrabi Gas Project.

Climate Change

No matter how effective the marketing campaigns that promote fracked gas as a 'clean energy' source are, it doesn't change the fact that gas is still a fossil fuel that emits dangerous levels of methane and carbon dioxide into

the atmosphere, worsening climate change and diminishing our ability to keep global warming within the 1.5% limit recommended by the PICC and agreed to by Australia in the Paris Agreement.

While all of the above concerns are strong enough reasons to object to the NSW Government's approval of the project, the most urgent and pressing concern is that of climate change, and the need to keep warming within 1.5% so that we can provide our kids with a quality of life that is at least comparable to the one we have had the privilege of enjoying.

The IPCC states that we must stay within the limit of 1.5% warming if we are to avoid catastrophic and uncontrollable climate change. The decade 2020-2030 is of critical importance when it comes to limiting warming to 1.5%. Put simply, the actions we take in this decade will determine whether or not we are successful in limiting warming to 1.5% and avoiding catastrophic and uncontrollable climate change. In order for us achieve this objective, we need to focus our resources on developing the industries of the future and not the fossil fuel industries of past centuries. We need to leave the toxic gas that Santos wants to extract in the ground so that our kids having at least a fighting chance of a decent future.

The issue of intergenerational equality is at the heart of climate change. We are the first generations in history to engage in actions that will knowingly pose a direct threat to the future lives of our children. Its like we are playing a game of Russian roulette with our children's future, with the actions that we take that result in an increase in global warming equivalent to loading another chamber, with ever more chambers being loaded and pointed at our children and grandchildren in the future.

We don't have the luxury of time when it comes to limiting and reducing the causes of climate change. We have to act with urgency and without delay. It is for this reason alone that you must object to the Narrabri Gas Project going ahead. Few of us in society have the kind of power that you have to make a real and lasting impact when it comes to tackling climate change. You have the power to make a significant contribution towards tacking climate change by objecting to the Narrabri Gas Project, and when your grandchildren look into your eyes and ask you what you did to stop climate change, you can look them in the eyes and say "I made a significant contribution towards creating a future in which you can thrive and flourish". That is an opportunity I implore you not to squander.

Thank you for taking the time to read my submission and I look forward to hearing from you in regards to the submission.

Yours sincerely,

Dennielle Cooke

Subject: Submission: I object to the Narrabri gas project, this must not happen

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I am appalled this this would even allowed.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Our climate is needing help and this gas pipeline is going in the wrong direction.

Please don't let this happen.

Yours sincerely,

Kazz Porter

Sent: Sunday, 9 August 2020 9:57 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a resident of NSW, an avid bush walker and a mum to a 19 year old daughter who deserves a safe climate future.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. The Pilliga is a uniquely important ecosystem for biodiversity and water resources. It had been the home of the Gomeroi First Nations mob for tens of thousands of years.

My key objections to the project are as follows.

- It is the biggest threat to climate in NSW. We are currently in a global climate emergency and approving the Narrabri gasfield would be utter lunacy. This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our imminent task is to reduce emissions by more than 7 million tonnes a year.
- Santos has no social licence. 97% of the local community say NO to Pilliga CSG—and tens of thousands of Australians have already voiced their concerns about this project with a record breaking 22,700 formal objections in 2017.
- It will destroy the living culture of the Gomeroi people.

- Industrialising it with the infrastructure associated with 850 coal seam gas wells (countless roads, power lines and pipelines) will irreparably damage its cultural, ecological and hydrological value.

- The Narrabri gasfield will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- And it won't even reduce gas or electricity prices for Australians. We do not need this as part of a "gas-led" recovery.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Donna Carey

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Our leadership is absolutely failing our children's generation by making decisions that make no moral or environmental sense in terms of their safe future living conditions. But even worse, here in Australia, despite business leaders (Amazon, Apple, Unilever and many others) and Nations around the world (EU, UK, even China) taking strong action and setting ambitious targets, our leaders continue to make decisions that are also setting our children up to take walk into an economy which will walk off a cliff while heavily invested in fossil fuels as the world around us decarbonises.

If you are not strong enough to make the difficult decisions required for effective action to protect our children's future living conditions and economic prosperity, I urge you to step aside for someone who will.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Great Artesian Basin is our country's largest groundwater basin of freshwater and an invaluable resource for the nation. It cannot be that corporate exploitation of a natural resource can again be prioritised over preservation and protection. The need for climate action is more urgent than ever and parts of the nation (e.g. the recently announced Renewable Energy Zone in NSW) are demonstrating a shift to cleaner, more responsible sources of energy production. Narrabri Gas Project directly contradicts this progress, threatens our most important groundwater resource, and dismisses the concerns and objections of tens of thousands of Australians. We are privileged to live in a country that has abundant natural resources and the potential to be a leader in the renewable energy sector. But this can only occur if Australian government departments prioritises climate action and the creation of clean energy future.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Michael I

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

It is of the utmost importance that you reject Santos' proposed Narrabri gasfield in the Pilliga forest. It will adversely affect not only the region, state, country but the entire world. The release of more carbon and methane into the atmosphere when the risks and damages to the climate and the entire environment are so well known is an act of criminal negligence. Any money earned from allowing this project is dwarfed by the \$trillions in damage it will inflict.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Subject: Submission: I object to the Narrabri gas project

I wish to lodge most strongly my objection to the proposed Narrabri gas project.

It defies belief that this is being considered.

After reading countless well researched and comprehensive government and industry reports I object on the grounds that it is environmentally and economically bankrupt.

As recent gas extraction history in the area shows the likelihood of accidents is absolute.

The risk of contaminating creeks, rivers and the great artisan basin would be irreparable and disastrous to Australia's food bowl. Food and water security is paramount. And the damage continues long after the fields are decommissioned.

This proposal is environmentally devastating to not only our farming land but also to the surrounding natural ecosystems.

We are being lied to when they say gas is a clean transitional energy source.

The full life cycle emissions of a gas well are nearly the same as produced by black coal.

Over 20years the methane is 85 times more potent than co2.

For every gas well 15 jobs in agriculture is lost.

The stats show that since 2001 there are less gas fired power plants than ever. If it was truly transitional, gas would be dominating the market. It is not.

Even unsubsidised, right now in Australia wind and solar is already cheaper. By 2027 it will be cheaper in China.

The economical argument for gas is defunct. It is a false economy.

And saying no to the fracking component of the proposal is equally disastrous as there is a legal loop hole that will enable fracking permits to be granted without community consultation.

Sincerely,

Simone Wilks

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Why jeopardise the future of Australian farms which could supply food for ever to get a few years of gas out of the ground . You are depriving future Australians of water from the Great Artesian Basin for a quick buck .

Wake up these gas companies pay nothing and take away our future.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Trevor McGowen

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Please refer to this very urgent report from the Commission for the Human Future, based in Canberra. It outlines the looming global food insecurity crisis and details how important uncontaminated water is in food production. www.humanfuture.net (click on Food is at the Heart of our Future).

It's time experts were listened to instead of industry heavyweights with no idea about the suffering that is heading to humanity by mid-century. All experts on climate, meteorology etc including the government's own Dept of Primary Industry says that climate change is the greatest threat to food production.

Gas and methane (fugitive emissions) are worse for global heating than CO2. Furthermore, there will be no market for them globally as economies strive to reduce greenhouse gas emissions by half this decade. Green hydrogen (made using solar and wind) and renewable energy sources themselves will kill the international market for gas. In that case, why would we destroy our food-producing capability for a product that has no viable future?

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Dear Commissioners,

I urge you to stop !!

Let's be frank.... the money you plan to make from this project won't benefit the communities that surround it. It will kill them!

Australia is these bush communities. That's what makes us different! That's partly why so many from other countries want to come here and see our beautiful land. What you're proposing could see the end for current families and ruin any chance their children had of carrying on a legacy!

To think otherwise is un-Australian! Please stop, before it's too late!!

Yours sincerely,
Meg Gruber

Sent: Sunday, 9 August 2020 8:22 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, with various culturally significant sites scattered throughout the pilliga - sandstone caves being just one located between Narrabri and Coonabarabran, as well as the sculptures in the scrub cultural walk located near Baradine. This gas project will negatively affect the biodiversity and water resources.

See the below links

<https://www.nationalparks.nsw.gov.au/things-to-do/walking-tracks/sandstone-caves-walking-track>

<https://www.nationalparks.nsw.gov.au/things-to-do/walking-tracks/sculptures-in-the-scrub-walking-track>

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values. It has been shown that parts of the Pilliga with already contaminated sites in the area with bush regeneration already attempted in the area, all the plants planted died so what if that happens to the whole area? Every plant in that area will die.. this flora is a critical part in supporting the huge endangered species list that are actually specific to that area as per the below link.

<https://www.environment.nsw.gov.au/threatenedSpeciesApp/cmaSearchResults.aspx?SubCmaId=260>

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. We know that renewable energy is a way forward to conserve this country and the world. Why can't the government and or companies partner with farmers to put

renewable energy projects on farms? Rather than destroy a complete unique landscape for all current and future generations and contribute to destroying the world.

- And it won't even bring down gas or electricity prices for Aussies!

To: IPCN Enquiries Mailbox
Subject: Submission: I Object to the Narrabri gas project

Dear Commissioners,

I live in Toowoomba and have seen what can only be described as the rape of the land by unconventional gas to the west of here. In the Surat Basin, boreholders have had their water allocations cut by up to 50% because of the draw down of aquifers by fracking (QldGovtfigures). Hundreds of millions of dollars is required to remediate the lands of failed UCG experiments, and the taxpayer is picking up the bills for failed companies.

The sovereign risk of gas companies going belly up is real. Long term assessments of the gas market are currently impossible, but all agree it must be down, risking the Pilliga wells becoming stranded assets. Prices for domestic gas will not be eased by raping the Pilliga either. The limitations of the GISERA study mean it cannot be used as an excuse to say the process is safe - and truckloads of evidence are emerging to show it is not.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Sent: Sunday, 9 August 2020 8:16 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

To the Independent Planning Committee.

Gentlemen,

I object to this project and believe it should be rejected.

My objections are based on the following:- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.

It will clear close to 1,000 hectares of the Pilliga Forest fragmenting the largest temperate woodland in new South Wales, home to unique wildlife.

It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.

It will add to climate change through large deliberate and fugitive methane emissions.

It will cause trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay People.

It is not justified: Santos 'own export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have dealt with the serious health effects appearing in peer-reviewed research in the US.

The profits from this Gasfield cannot justify the damage it will cause. Please demonstrate your empathy to the people of NSW. Those in the Pilliga should not have to face bringing up their children in an industrial area where the impacts on their well being will last for generations.

Insurance Companies, having read the chief scientist report, are reluctant to insure landholders.

It will cause economic upheaval in Narrabri and put agricultural industries at risk.

In 2012 I visited families in the Chinchilla area in the Queensland gas fields, who tearfully told me of the bath water burning their children; of cancer clusters, of being able to ignite their tap water; I saw photos of damage and pollution on their farms. Many sold out to the company. Their dreams dashed and their homes bulldozed. I cannot see why it would be any different in the Pilliga.

It is up to all of us to be good ancestors in making decisions that will do no harm. Your decision and your legacy are extremely important.

With respect Carol Horton

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am a retired agricultural scientist with over 40 years experience in 20 countries managing a wide range of food producing projects.

I am flabbergasted that consideration would be given to a gas project in such an important food producing area as Narrabri. It is not in our national interest to be risking pollution of irrigation water for a short term project of this nature. Renewable energy is now cheaper than fossil fuels so to approve this project will result in a stranded asset for the investors & lost food producing land for the rest of us.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

To: IPCN Enquiries Mailbox
Subject: No to the Narrabri Gas Project

Dear Independent Planning Commission,

I am writing to express my concern and objection to the Narrabri Gas Project.

I vehemently oppose the proposed Narrabri Gas Project. Destroying the Pilliga forest, and the Great Artesian Basin would be a crime. The future is not in gas, it's in renewables. For humanity (and all animals) to live for another few generations at least, we need clean air, a stabilised climate and clean water, all of which this project will help to destroy.

This is not a sensible move for the world, and simply a money grab. This will have significant negative environmental impact.

It's also on the sacred land of the the Gamilaraay people and would be disrespectful and irreversibly harmful to the heritage of the area.

The community are opposed to the project and you need to work in the interests of the area (and of the world).

There are other forms of energy, which are clean and we need to harness this kind of energy, rather than destroying our earth to mine for non-renewables.

Given everything that has been happening in the world with climate change, including the recent devastating bushfires here in Australia, we're seeing first hand the enormous far reaching, long lasting destruction that projects such as this one is causing.

Please, we are begging you, do not let the Narrabri Gas Project go ahead.

Yours sincerely,
Linda Radclyffe

Subject: Objection to the Narrabri gas project

Dear Commissioners,

Several years ago I visited the Pilliga forest with my sister who is a botanist. The forest was a wonderland of amazing plants and birds. I would dearly like my granddaughter to be able to see this beautiful place when she grows up. I feel our country has been wantonly ruined by the mining of fossil fuels. The damage done cannot be undone. Coal seam gas has wrecked havoc in many parts of the world and Australia is indeed a strange place when we export more gas than any other country and buy it back at great cost. The answer is not to decimate more of our country but to put all our efforts into developing sustainable energy sources. It must be done to combat global warming, a far greater risk to our species than corona virus. We are now heading into another bushfire season. Siberia is burning, California is burning just like last year and so, I expect, will we. The cost is enormous, far outweighing profit from ruinous coalseam gas. Santos' proposed Narrabri gasfield in the P

illiga is on par with Rio Tinto blowing up the Juukan Gorge Caves. The destruction must stop. It just isn't worth it.

We are in the fight for our lives literally to stop the planet heating to untenable temperatures. Adding a million tons per year in greenhouse gas emissions is utterly disgraceful.

The poisoning of land and water will leave our farmers unable to feed us and what is the benefit. Extreme short term gain for a few (the mining industry is very good at inflating the number of jobs available then automating as much as possible) and long term pain for the majority. The government must find the courage to reject the money of the fossil fuel industry and govern in the best interests of the people. Invest in renewable energy jobs and support farmers.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga forest, surrounding farmland and water is important because the local community say NO to Piliga CSG. I am a parent concerned by climate change concerned for future generations. I want clean, abundant energy. CSG is a huge risk to this which I am unwilling to support.

The Artesian basin should not be touched for CSG. This water source should not be polluted by the processes of CSG. NO water NO LIFE. Its very simple.

We can live without CSG using other renewable energy which does not destroy our fragile planet.

Due to the above reasons I strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment.

I look forward to hearing from you in regards to this submission.

Yours sincerely,
PETER BARBER

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Please listen to Australian people.

Yours sincerely,

Karen Maker

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission in relation to the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to the significant environmental, heritage, social and economic impacts. I have outlined below my key concerns in relation to each of these impacts. I am a parent of two small children (aged 5 and 3) which makes me particularly concerned about the impact of this proposed project and the devastating and long term environmental implications if this project was to proceed.

Environmental impacts

I firmly believe the Narrabri Gas Project would be an absolute disaster for the environment. The risk this project poses to essential water supplies in the Pilaga area cannot be understated. By removing 37.5 billion litres of water over 20 years the Great Artesian Basin will be dangerously drained with not enough known about the long term effects. This project will also result in a loss of biodiversity in the largest temperate woodland in eastern Australia at a time when our state is being cleared with no regard for the future. We simply cannot afford to lose such precious woodland areas. The project will also be a disaster for the environment due to the greenhouse gas emissions which would be released. The world can not afford for another 5 million tonnes of carbon dioxide equivalent to be released ever year as a result of this project.

Heritage impacts

The Pilaga area is incredibly important from an Aboriginal cultural heritage perspective and I am very concerned that this project will result in damage and destruction of irreplaceable heritage sites. While Santos have said they will avoid damaging significant sites not enough work has been done to understand exactly what is in the area and where sites are located. As such there are insufficient protections in place to ensure Santos does not choose profits over protection of these incredibly important heritage sites. We have all seen how easily this can happen before, most recently with Rio Tinto and I can't imagine having to tell my children that yet more irreplaceable sites of Australia's history have been destroyed.

Social impacts

The project will create a range of negative social impacts for the Narrabri community. While this project may create jobs (Santos claims 190 direct jobs and a further ~320 indirect jobs) the net result may actually be loss of jobs with more jobs lost in other more productive sectors (agriculture, manufacturing and tourism). It will also create significant stress for the farmers whose farming land will be impacted for this project.

Economic impacts

From an economic perspective the case for this project is flawed. While it's not happening fast enough, the world is moving towards a low carbon world and as a result the market for gas is collapsing as renewable sources become the cheapest source of energy. We already have a glut of gas in Australia so we don't need to start another expensive CSG project which will likely become a stranded asset of the future.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Justin Ayre

Subject: Submission to the Narrabri Gas Project

I OBJECT TO THE NARRABRI GAS PROJECT

Thank you for the opportunity to make yet another submission to the proposed Narrabri gas project.

I have travelled twice to the Pilliga and seen the damage that has been done there while just 50 gas wells have been operating.

As an Australian who loves this country & its unique natural environment, & also as a global citizen who has followed the science of anthropological climate change, I am deeply concerned about the potential negative impacts from the Narrabri gas project. The threats to our climate, water, natural environment, our food production, the communities of the north west, particularly the culture of the Gamilaraay, & to our democratic rights, are all too great. Much damage that is likely has the potential to be irreparable.

I have read the Dept of Planning, Industry & Environment's assessment report for the Narrabri gas field expansion proposal & I have many reservations about its scope & rigour.

I have found clear scientific evidence supporting many reasons why the Narrabri gas project should not be approved; I will address the issues that particularly worry me in this submission:

Impact on climate change: if Santos' proposed expansion of its gas field in the Pilliga Forest goes ahead it will commit Australia, and the world, to decades of greenhouse gas emissions from the mined gas when it is burnt, the inevitable releases during gas extraction, and ongoing fugitive emissions associated with disturbed coal seams from CSG drilling. In its 2018 report, the International Panel on Climate Change could not be clearer when it stated that to maintain global temperature rise to 1.5 degrees centigrade above pre industrial levels there is now no room for new fossil fuel projects. Our governments' commitment to increasing gas production and new projects, like Santos' expansion in the Pilliga, will seriously undermine Australia's ability to attain its Paris Agreement targets. Targets that are already outdated by more recent climate science that shows emissions must be reduced more quickly to avoid catastrophic climate change.

Both the NSW & the Federal governments have a moral responsibility to act now to reduce GHG to protect intergenerational equity, but also, as evidenced by the recent years of the worst drought on record and the 2019/20 fire season, the worst on record also, to protect the people of Australia now. The threats to our climate from the 850 wells proposed in the expansion of Santos' gas field at Narrabri are not acceptable.

Methane is a far more potent GHG in the shorter term than CO₂, 84 times more potent is the usual figure stated in science publications. It stays in the atmosphere for a lesser time than CO₂, however that time is far greater than the time we have to effectively reduce our emissions. Methane therefore is the GHG we should be targeting for the fastest & most effective climate change mitigation.

<https://www.csiro.au/en/News/News-releases/2020/Frozen-air-reveals-human-caused-emissions-of-fossil-methane-much-higher-than-previously-estimated> - this link is to research that proves both the NSW state government as well as the Federal government are wrong in their advocacy for gas as a low GHG energy source to transition to renewable energy. I also believe it updates the GISERA research quoted in the DPIE assessment report.

Aboriginal rights to land & culture: DPIE's assessment report pays just cursory attention to the rights of the Gamilaraay traditional owners to their land that will be industrialised & changed forever by this project. I am shocked that this regressive attitude is allowed to persist within government departments at this time when there is so much more

recognition of the rights of First Nation People of Australia & the value of their culture to us all. Australia cannot afford to risk further loss or harm to these people & their culture, a loss that will also be detrimental to all Australians.

Water & the Pilliga Forest: both ground & surface water are threatened by this project. Santos already has a record of pollution events, 20 are talked about, some cannot be rehabilitated including a polluted aquifer. The 'dead zone,' a legacy from former gas field operator Eastern Star, is a large area of vegetation that has died after a wastewater spill. This area has had repeated rehabilitation plantings that also have died, a strong indication that the ground water below it remains polluted. During one of my visits to the Pilliga I saw the leaking wall on one of the waste water ponds, a sign that careless maintenance was the norm of the Narrabri gas field under Santos' management.

The layout of a CSG gas field leaves the area mosaiced with access roads, fragmenting habitats & facilitating greater access for weeds & feral animals. This is an unacceptable threat to the ancient & unique Pilliga Forest which has international recognition for its woodland bird populations & Australian Federal government recognition as 1 of 15 national biodiversity hotspots.

Bushfire: Flaring gas wells are an unacceptable fire threat to the woodland. Even during the recent worst drought on record, when the Pilliga was parched & tinder dry the flaring continued on Total Fire Ban days.

Waste: The project has a conservative daily estimate of 117 tonnes of particularly high percentage salt, water waste. There appears to be no clear plan for the disposal of this toxic water. I do not understand how this project can be approved when this issue has not been addressed.

Domestic gas supply & pricing: Peak gas plants are needed at peak times only to fill short falls in supply, therefore need small amounts of gas supply. We are already producing enough gas to cover this need particularly if home energy sources are shifted from gas to electric, which is cheaper & becomes cleaner, as renewable energy replaces fossil fuels in electricity production. Contrary to what DPIE's assessment report states, the current high price of domestic gas in Australia, which is crippling the manufacturing industry & has pushed our electricity prices through the roof, was caused not by a lack of supply but by the price tripling to match the international price once gas export started a few years ago. All other gas exporting countries have policies in place to protect the affordability of their domestic gas supplies. Until the Australian government takes action to regulate the market dominance of a few gas producers who have been allowed to set the domestic price, which appears illegal to me, the gas price will remain high & no amount of extra gas supply will reduce the domestic gas prices here.

Economic issues: The current slump of the international gas price has led to a glut of gas on the world market which raises the question, why the economic viability of the Santos proposal was not challenged in the DPIE assessment report? This is amplified by the cost of gas production in the Narrabri gas field as it is far greater than other gas fields; there are consistent estimates of over 100% greater, which means the gas produced there cannot be sold at a reduced domestic price & make a profit. This also leads us to the question of Santos' current financial status. I have read a number of financial reports that state it is failing. It has had total write downs of almost \$8billion since 2014. And since the slump in gas demand worldwide, it has lost \$980 million in Australian CSG investment. How then can the DPIE consider Santos fit to operate the hugely expanded gas field in the Pilliga? Where will resources come from to meet the company's commitments as outlined in DPIE's assessment report to ensure the natural environment of the Pilliga, the ground & surface water, the agricultural land & the health of the community are not damaged? How will it ensure high quality rehabilitation of the gas field & secure capping of decommissioned wells at the end of production? Apparently this has not been considered in DPIE's assessment, however, the blinding reality remains & should have triggered the Precautionary Principle.

NSW government policy on CSG: The DPIE assessment report failed to mention that just 2 of the 16 recommendations from the Chief Scientist's report on CSG, 2014, have been fully implemented. Half have not been implemented at all even though the NSW government committed to do so. It is shameful that DPIE has approved this project knowing that such recommendations by the Chief Scientist as enhanced insurance cover, are not addressed, or that it is happy to approve the project knowing it will drill in areas where geology is not understood, in the Chief Scientist's words, was not 'characterised adequately'.

The Precautionary Principle & social license: In its report the DPIE flagrantly dismisses the science that informed the 97% of submissions that objected to this project. It has the temerity to place its “experts” as somehow superior to those scientists who wrote objecting submissions, or whose advice was used by other submission writers.

The findings in the report far too frequently rely on assumptions i.e. the ‘reasonable’ permeability of coal seams; or that the project is ‘reasonably’ isolated from other industry; the project is ‘unlikely’ to harm the environment or the health of the community. Like the uncertainty of Santos’ financial viability that I discussed above, these assumptions, & that the report says issues can be dealt with post approval, indicate a rampant disregard in DPIE’s report of the Precautionary Principle, which is required to be applied when there is incomplete or uncertain data available to assist the assessment process for the project.

The DPIE report accepts the data gaps on geological strata; it assumes that Santos is capable & has the resources to self monitor; it assumes Santos will have the where-with-all to react in time to stop potential catastrophic damage when risks become reality. This appears to be blind faith placed in a company who has a history in the Narrabri gas field of 20 odd pollution events, often under or unreported, including damage to ground water aquifers. Is there any wonder that there were so many objecting submissions? The very large number of objecting submissions is compelling evidence that the project does not have social license & DPIE has disregarded this regulatory requirement also. It seems apparent that this assessment report has been written to favour the proponent with disregard for current & future Australians’ wellbeing.

If we are truly following the science then we know that we have such a short time to act to reduce global warming, less than 10yrs to cut our GHG emissions for effective climate change mitigation. Whether we are scientists, community members, politicians, DPIE assessors or IPC commissioners, we all have a moral responsibility, an obligation to break the mould of the status quo in regard to the way we are using our planet. We cannot flourish as a species, or even survive unless we are in reasonable harmony with our climate & natural environment. Drought, bushfire & Covid are evidence we have pushed our natural world, our life support system perilously close to chaos. We have little time to change before it is too late. Our Federal & NSW governments are failing us in their push for business as usual in regards to unsustainable use of our natural resources; the IPC commissioners are our last hope to stop this large fossil fuel project, the most logical response to its proposal. With the greatest respect, the power is in your hands, please use it, please, do not approve the Narrabri gas project.

Yours sincerely, Annie Marlow, Berkeley, NSW

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Cate Cook

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Please do not establish a coal seam gasfield in the Pilliga forest area. This will cause so much damage, that it will destroy this whole area for farmers, wildlife and the ecology.

Aboriginal people have lost too much of their sacred sites to mining, and your company will destroy more. You will also bring up salt with the water, which will destroy the forest. -

Why are you risking the health of the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers???

-You would also be increasing tons of greenhouse gas, which is not a good thing to do when others are trying to prevent it!!!

Please think about what you would destroy!

-

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

My name is Ellie and I live in Coonamble, NSW, a town situated on top of the Great Artesian Basin.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest because of the many detriments it will have to my home town.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Ellie O'Connor
New South Wales, 2829, Australia

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

My husband and I recently discovered this beautiful place. It is an area of outstanding beauty and a growing area for tourism especially important as we aim for state based tourism to help the economy in a post COVID recovery.

It is also uniquely important for Gomeroi people, for maintenance of culture, biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I write to you to object to the proposed Narrabri gas-field in the Pilliga forest. Good public policy at this critical time for our country and our planet requires all those who are in a position to influence what happens to our people in the near to medium future to do so with more than 'the economy' in mind.

Because of the damage these gas fields would do to water security, biodiversity and community cohesion this development must not go ahead.

As a former farmer, I am appalled at the potential destruction these gas fields would cause. Recent history, the bush fires last summer, has brought home to all Australians the need to better care for our native forests. Pilliga must be protected not despoiled.

On top of that is the potential emissions and the escalation of climate change.

One company, benefitting from the destruction of so much.

Please, dear commissioners, do not let this happen.

Yours sincerely,

Anne Coombs

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

I wish to voice my objection to the Narrabri Gas Project for several reasons including its environmental, heritage, social and economic impacts. In particular, it does not make sense in terms of the science around energy production options in our country, which is blessed with opportunities for cheap renewable energy.

Also, as a parent and grandparent I have a vested interest in trying to do all I can to protect the future of future generations in the face of the climate crisis which is becoming more and more urgent.

I have read a lot in this area over many years, including much science-based material from reputable sources such as Ross Garnaut - for example, his recent book "Superpower", Tim Flannery, Barry Jones as well as summaries of IPCC reports and reports by other bodies or groups like CSIRO & the Australian Energy Market Operator. These last two have recently determined that the cheapest way to ensure reliability of supply is a mix including better communication between neighbouring states, batteries and pumped hydro; with fossil fuel gas unlikely to play an increased role, on economic grounds alone. In particular this pathway could obviate the need to frack the Pillaga by opening up opportunities for energy-intensive industry such as building a zero-carbon factory in New England to make fertiliser from renewable energy instead of fracked gas.

The AEMO is the government body responsible for the electricity system and its recently released roadmap of an optimal national electricity market to 2040 is designed with a focus on security, reliability and the lowest cost for consumers. According to its director, the question is no longer whether renewable energy is the best choice but how do we efficiently integrate the available resources into the system so that we can use this free fuel.

I find it extremely odd that the National Covid-19 Commission is going for more gas production in light of the known science and in conflict with reports such as this one by another government body, one with considerable long-term knowledge in this very area. It should be noted too that gas giants Origin Energy and Santos have lost more than 10 billion dollars in the last 5 years on gas and oil projects, yet the Commission is still recommending billions of dollars in taxpayers' money be spent on a gas pipeline for a dying industry. This is not respecting expertise and knowledge, this does not respect the science on this subject. I simply fail to understand this stubborn resistance and lack of respect for scientific knowledge.

Further, many groups both in Australia and throughout the world are calling for the change to renewable energy eg Farmers for Climate Action, The Climate Health Alliance and industry and business. For example, in March Telstra committed to 100% renewable energy by 2025. Various states of our Commonwealth have committed to renewables also: the Tasmanian government has set the ambitious target of 200% renewable energy by 2040; NSW's Energy Minister said late last year that he would respond to the climate science and embrace the opportunities presented by the decarbonisation of the economy; South Australia's government is aiming for 100% renewable energy by 2030.

Fracking the Pillage simply does not make sense in light of what I have just described.

The Narrabri Gas Project should also not go ahead because of its impact on the Pillaga Forest itself. This ancient forest is immensely meaningful to First Nations peoples and the community around it. The Pillaga is also part of the recharge zone for the Great Artesian Basin and thus a vital part of our fresh water supply on our increasingly dry continent, as well as being a refuge for our native wildlife and important for biodiversity.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

For the Federal Government to be basing Australia's post viral Economic recovery on this massive mistake is pure folly and criminal vandalism. It reeks of corruption. The recommendation from the biased Commission, with its ridiculously high number of Fossil Fuel executives is so transparently wrong.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners, and Santos executives

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Whilst I trust the reasearch of the information resulting in the above objection and agree with their objection I also object in my own right.

I have lived in Coonabarabran in the past for 15 years and I have heard first hand reports of contamination of groundwater on farms in the area from gas exploration drilling. If changes happen - once done they cannot be undone. I am aware of trusted anectotal evidence of massive cracks appearing in the ground in the Piliga after drilling for gas - the conclusion that it was due to the drought is just ridiculous in my opinion as this has never happened before in any droughts it is what happens on the blacksoil plains but not in sandstone country.

That personal opinion aside:-

The risk is just too great because damage to aquifers cannot be repaired.

PLEASE PLEASE PLEASE - DO NOT TAKE THIS RISK WITH WATER FOR ONE OF OUR MAJOR FOOD PRODUCING AREAS.

We can get gas from elsewhere if needed but it is becoming more redundant as solar and wind and other forms of non - fossil fuel energy production is on the rapid rise.

NEW, VIABLE AREAS FOR FOOD PRODUCTION ARE RARE AND CLIMATE CHANGE MAY ALTER WHERE AND WHEN WE CAN GROW OUR ESSENTIAL FOODSTUFFS.

STABLE FOOD PRODUCTION IS FAR MORE IMPORTANT THAN JOBS AND INDUSTRY WHICH CAN BE LOCATED ANYWHERE.

GOOD ARABLE WELL WATERED LAND CANNOT BE MOVED.

PLEASE HELP TO PRESERVE OUR FUTURE FOOD BOWLS.

Yours most sincerely,

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object strongly to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Even in this uncertain time the environment needs to remain an important issue for all Governments. One of the reasons we are in this situation with COVID is the delicate balance which is being interrupted world wide. Therefore to ignore all the evidence and still determine a Gas project will not have an effect on the surrounding Pilliga Forest, the waterways, farmland and the environment is closing your minds to all the scientific evidence.

I passionately care what is occurring in this country because it is the environment left to the next generation who will be increasingly affected by the carelessness of the people in charge of decisions..

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sent: Sunday, 9 August 2020 5:07 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I object to the Santos NGP and any and all infrastructure currently being assessed, or approved, by NSW Planning that is designed to service/support it, being the Western Slopes and Hunter Gas Pipelines.

Reasons for my objection:

1. The inequality between regulations and conditions placed on Rural Landowners and their landholdings in comparison to Santos and the NGP and GTPs:

As a rural landowner I am subject to numerous laws and regulations that restrict what I may or may not do on, or with, the lands I have a title deed to. However, a company can obtain a PEL over my property giving them rights over what is under my land, including how they can access it and I may have few rights regarding their activities, yet they have many. Alternatively a GTP proponent may gain approval to build a pipeline on my property, bestowing them rights over part of my land and again I may have few rights versus their many.

Fortunately this is not the case for me, however for many of my fellow NSW rural landowners this is either a current concern or a potential future one. I also stand in support of them.

As rural landowners, we have over the years, experienced an increase in laws, requirements and regulations that affect how we are able to use and manage our own properties. Many of these are directly related to environmental and resource protections.

As an environmentally aware landowner I always adhere by them, even though they do inhibit some farming/agricultural activities, because I understand the purposes for them and by doing so I am helping to inhibit, or at least stall, the ongoing effects of climate change that rural landowners experience daily. All rural landowners I have meet are of the same opinion.

These laws, requirements, restrictions and regulations include:

- * Restrictions/laws on tree clearing (even singular or dead trees).
- * Restrictions/laws against native vegetation clearing.
- * Regulations regarding volumes of water storage capacity per hectare within far/property dams.
- * Regulations and licencing for water bore drilling and operations.
- * Required set quota water licences to draw from waterways or Rivers, even those on the property.
- * Regulations over what water obtained under water licences can be used for.
- * Regulations allowing water licence quotas to be reduced in event of water shortages due to drought conditions and/or high security users having first access rights. (Water Lic. holders still pay for full quota, though not obtained)
- * Laws that allow for legal action to be taken against us for extracting water either above our quota, or reduced quota levels.
- * Laws that allow for legal action to be taken against us for damaging a neighbors dam integrity, blocking seasonal watercourses or creeks, or creating weirs in creeks or rivers, that also pass through neighbors properties, to supplement water storage or water flow to, or onto our own properties.
- * Laws that allow legal action to be taken against us if we discharge pollutants (knowingly or accidentally) into waterways or directly onto soils within our properties that may leach pollutants into ground water or creeks.

- * Laws that allow legal action to be taken against us if we burn polluting materials on our properties, or light light fires without RFS approval and do not follow RFS guidelines resulting in a grass or bush fire event that they are required to extinguish.
- * Regulations/Laws that do not allow us to destroy, or purposefully disturb threatened or endangered plants, trees nor any native habitat that any threatened or endangered native animal is dependent upon . This includes water holes and essential wild life corridors.
- * Laws that allow for legal action to be taken against us to ensure that our neighbors are recompensed (monetarily or in kind) for any damage caused to their property (knowingly or by accident) due to our activities or poor management.
- * Bye laws that can be enacted to prevent us from negatively impacting our neighbors quiet enjoyment of the amenity of their property..
- * Restrictions/requirements placed on our actions/activities if we become aware of any indigenous artifact, or potential site, on our properties.

For all of these and more, we could be charged, criminally or civilly, or arbitrarily fined (which could be a bankrupting event) or be required to reverse the effect of our actions, at our own expense, to the full satisfaction of the body responsible.

I have compared some of the above with the proposed conditions and regulations proposed to be placed on the Santos NGP. I have also listened to or read the expert opinions put in front of the IPC hearings regarding many of the concerns raised regarding the NGP.

These have included:

- * The KNOWN Native Habitat destruction and natural cycle interference, creating a threat to both native flora and fauna, common, threatened and endangered, including the loss of natural wildlife corridors and the creation of fauna unfriendly open spaces and multiple roadways that the project will inflict on the Pilliga State Forest.
- * The very valid and scientifically shown threats that the drilling activities could have on precious groundwater resources which are vital to NSW rural landholders and communities even at great distances from the NGP. Any damage to, or pollution of, this water resource could have devastating long term, if not irreversible, effects on not only the sustainability of rural livelihoods and communities, but also their ability to continue to provide the produce they currently send to market and also therefore, provide a return to the Government via their taxes.
- * The ALREADY OCCURRED and irreversible pollution events that the exploration phase of this project have generated with zero surety provided by Santos that these type of events will not keep occurring other than a reassurance that an "Adaptive Management" approach will be used.
- * The "exemption" that will allow the proponents to flare excess gasses during extreme or catastrophic fire weather periods without any real workable solutions in place if this results in a bush fire event, which, given the area, would be likely devastating to both native flora and fauna, and potentially cause human injury.
- * The exemptions the project will enjoy in respect of potentially indigenous culturally significant sites and artifacts being damaged or desecrated.
- * The lack of concern that NSW Planning has shown regarding the effects of this project on all landowners and their quiet enjoyment of their amenity as well as their general piece of mind.

It is obvious that we, NSW rural landowners, are to continue to be more highly regulated, restricted, and will continue to face more consequences, for our knowing or accidental activities and management practices, on,our own properties than the Santos NGP on NSW State Forest lands.

For us "Adaptive Management " is not an option - we need to get it right first time, every time.

2. Climate change and gas production/use:

I, like many fellow landowners, rural and otherwise, are constantly trying to find ways to "do our bit" to reduce our waste production, conserve water and use less fossil fuel generated electricity.

We may install solar arrays and/or battery storage, use tank water, actively reduce electricity consumption via low power appliances or lights, or we may enact a smarter, more sustainable, ecologically friendlier, less chemically dependent "greener" farming ethos.

We are doing our "bit" for not only NSW and Australia but ,we hope, for our planet whilst at the same time producing the foods and vegetable based products that we, and the world rely on. We cannot continue to do so if we don't all contribute and commit towards reducing the causes of greenhouse gas emissions to at least stall, if not reverse climate change over time.

Fossil fuel production and use (Coal and Gas) is a major contributing factor to climate change. We can't just reduce the use of one and increase the use of the other. That's not how reduction of fossil fuel production and usage works.

By approving a new, long term source of CSG in NSW (NGP) you would encourage the establishment of industries that will continue to be totally dependent on gas for as long as the Gas Industry is prepared to produce and deliver it.

You would also be giving the green light to gas supply companies (including Jemena) to expand their customer base (including domestic households) to bolster their own profits whilst "hooking" people onto gas usage, which in turn, for example, will reduce those looking for solar domestic household solutions.

Approval of Santos NGP would also encourage other gas exploration companies to apply to go into production, basing their applications on this project. Certainly if the Santos NGP increased gas user demand in NSW and there was an influx of "new gas users" entering the market place, the 70 petajoules from peak production of the NGP will not be sufficient to "feed" demand.

As a result demand would stop decreasing, nor stay static, it would increase.

In addition, the further expansion of the gas production industry would further increase gas users and never ending cycle would ensue.

If, to further support the gas industry, either gas projects were financially supported or the price of gas itself was guaranteed, by the Federal or State governments, that is hardly "of benefit" to the people of NSW. The royalties gained would hardly cover the costs of maintaining guaranteed gas prices..

This would also leave very little hope for any significant investment in major, or multiple, renewable energy solutions or sources of power generation in NSW if gas becomes not a transitional fuel but the fuel of choice for NSW or Australia.

It appears, from the IPC Hearings content, that the NSW Government is willing to make Gas their fuel of choice but do not realise they may be extending time it takes to become a renewable energy powered State by doing so.

And for what?

That is the question that has not been clearly answered during the hearings.

It certainly does not appear to be for for the benefit of all the people of NSW....just Sydney, Newcastle and some industrial areas maybe.

It's certainly of no benefit to NSW rural landowners but once again...one Rule or Regulation for Rural Landowners, one "condition" and a bit of "Adaptive Management" thrown in, for the Santos NGP (and WSP and HGP).

Yours sincerely,
Pamela Austin

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Although I live in Sydney I am extremely concerned about the environmental damage caused by CSG extraction world-wide.

Total greenhouse gas emissions produced by the project could be 127.8 million tonnes of carbon dioxide equivalent, or 5 million tonnes a year. In a time when Australia is struggling to meet its commitments under the Paris Climate Agreement, this one gasfield would increase Australia's greenhouse gas emissions by nearly 1% per year.

Mobilising methane in coal seams could lock in ongoing fugitive emissions of this potent greenhouse gas for decades to come.

The Pilliga is a hugely significant landscape for Gomeroi people. Santos' Aboriginal cultural heritage assessment identified 90 known Aboriginal cultural heritage sites in the project area, including rock shelters, burials and historic camps and hearths.

Santos promises its drill pads and infrastructure will avoid these sites, but they're based only on previous work. No detailed new surveys for Aboriginal cultural heritage have taken place yet.

Santos proposed to undertake detailed surveys after it gets approval and avoid newly found sites of high significance but by that time it will be too late to stop the gasfield.

Over 20 years, Santos will remove 37.5 billion litres of water from deep below the Pilliga and treat it in the Leewood water treatment facility. This treatment will produce up to 840,000 tonnes of solid salt, laced with heavy metals, for which Santos still has no disposal plan.

Removing this water will cause depressurisation and loss of water in the Pilliga Sandstone, the southern recharge of the Great Artesian Basin, which outcrops in the Pilliga.

Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas.

Santos anticipates leakage from the precious alluvium that lies above the coal seams despite claiming there is no linkage between the water sources. Landholders that rely on the GAB, the Gunnedah Oxley Basin and other groundwater in the area are strongly opposed to the project.

Globally, the UN Environment Program's Production Gap Report in 2019 found that, "With average lifetimes of 20 years or longer for pipelines, terminals, wells, and platforms, the time to begin planning for a wind-down of gas production is, as with other fossil fuels, already upon us."

Their report found that to achieve the Paris Climate Agreement goal of keeping average global warming well below 2 degrees, global gas production needs to peak by 2030 and decline after that. To meet the safer 1.5 degrees warming limit, gas production needs to peak this year.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Peter Somerville

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am someone who cares about the future of Australia and naturally the rest of the world. I do what I can to minimise the impact of my life on this planet and believe that everyone should be doing the same, even if it means starting with small steps. After all, we only have this one world to live on, and as we've already exploited so much of it, we need to start thinking in terms of the future of our environment, rather than what revenue this will bring or what financial gains a few will reap from such endeavours.

And the protection of the Pilliga forest and surrounding areas from fracking is paramount in securing the water, wildlife, forest as well as the livelihoods for farmers and farming areas. This area sits on an artesian aquifer and provides the only source of fresh water through much of inland Australia. And Santos wants to frack this, and say they will attempt to minimise the impact? Attempting to prevent a catastrophe on the largest and deepest artesian basin in the world is just not acceptable. And with all the fracking projects that have proven to have gone wrong, and with Santos having a proven track record of contaminating groundwater aquifers, I am quite frankly astounded that this is even being considered!

In addition, with over 98% of landowners who are going to be impacted by this project saying they do not want this to go ahead, and with this being yet another fossil fuel endeavour that will increase our greenhouse gas emissions, this is even more reason why not to give this a second thought. As such, due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I lived in the area once and realise how important it is to leave the Pilliga Forest in it's untouched state. We have destroyed enough natural spaces already, it just makes it all the more important to preserve what is left.

As an environmental scientist I also know that Coal Seam Gas has many negative side effects including harming aquifers, releasing methane that adds to climate change, clearing bushland and disturbing natural systems. I believe we should invest in clean energy like solar and wind.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Australia is one of the driest continents on the planet! We need to protect our water resources not put them at risk!

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Rowena Muller

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Sorry to point out the obvious but there is no time left for us to be stuffing around with the environment. Nothing is more important! Not the economy, not jobs, not this kind of energy provision and not Santos's profit.

It is very obvious we are not learning from signs the environment is sending us about previous mistakes we have made in using our resources for short term gain. Allowing this would have further drastic environmental impacts and we need to think about the viability of further generations first and foremost.

Let's face it, the recent example of Rio Tinto's destruction of hugely significant Aboriginal cultural artefacts is just one of a long list of environmental and culturally destructive actions by big mining companies. They take more than they give.

With this historic legacy by their mining forebears, there is nothing Santos or their scientists can say that should possibly convince any of you to allow this project in the Pilliga to go ahead. They should not be trusted.

After all has the company told the Commission how they will bring the project in to be green house emissions neutral? Or restore the land when its finished? Or fix the probable water issues it causes to farmers or the rest of the environment? If not it should not be allowed to proceed.

Mining for coal seam gas is a dying industry, as it should be because of the destruction it causes. There are much better ways to create energy, that cause fewer environmental impacts and create more job. As we all know this energy is not meant for which as we know is not meant for the Australian market but will be at our cost.

Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

We already have one of the highest per capita greenhouse gas emissions in the world. This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

I have faith that people in your position can make the connections between the recent environmental disasters such as the bushfires, the droughts, the melting of the icecaps, the species extinctions, the logging of forests and even the increase in virus pandemics with our actions such as this project proposes.

Please don't allow this project to proceed.

Sent: Sunday, 9 August 2020 4:03 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a concerned citizen of New South Wales. While I live in the city currently, I was born and raised in rural areas in this State, and I am appalled that the ancient Pilliga Forest - the natural home of over 30 endangered native species - is again at risk of destruction for alleged short-term profits to be made in a dying industry. New South Wales does NOT have a gas shortage, and will not be at risk of one in the foreseeable future. However, we do have a climate emergency because of the insistence of a small number of influential companies to ignore the scientific reality and continue to invest in the stranded assets of the fossil fuel industry. There will be no viable living space in New South Wales if this and similar projects are allowed to proceed and devastate the natural resources and environment that we all depend on for existence. How can I instil hope in my children if you at the Independent Planning Commission keep making decisions that ensure they will have no future.

Further, Aboriginal heritage has not been adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding "areas of high cultural heritage value to local Aboriginal groups" fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture. It is unconscionable in 2020 that it is still somehow acceptable to ignore the voices of the oldest land stewardship wisdom in the world.

The Assessment Report states "the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region." However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

The infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed. The summer of 2019/20 demonstrated how devastating any bushfire can be to massive areas of land, native species, biodiversity, people and livelihoods. The people of Narrabri have already lived through this devastation. Please do not condemn this to becoming the "new normal".

Due to the above reasons, among others, I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

The world has turned its back on nuclear power, coal is in decline since 2008 and most of the value in coal companies has been eroded. Oil has past its peak and it too is declining with value being lost. BP is cutting 40% of its oil production and investing in renewable energy. Gas has not lived up to its "transition fuel" name plate. And poses a great threat through losses to the atmosphere, methane being many times a greater green house gas than CO2. Gas will soon follow simply because renewable energy is cheaper and BETTER!!

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

Simon Chinner,
5255

Subject: Objection to the Narrabri Gas Project

Dear Independent Planning Commission,

From my concerns about this project, I am compelled to make a submission on the Narrabri Gas Project. You can include my name and submission on your website.

I wish to object to the proposed Narrabri Gas Project due to what I believe to be its significant environmental, heritage, social and economic impacts.

I am an architect who has worked all of my professional career in seeking the conservation of the cultural built environment. However, I can see that without action to make better decisions for the future of our whole environment, there will be no whole environment for our culture, society, and human society, to survive within, let alone continue to reach its potentials.

Decisions in projects of this nature need to be made on comprehensive, considered planning grounds, with environmental sustainability in the forefront. Projects which pose a threat to our natural environment, as does the plan to extract coal seam gas from the Pilliga, cannot be entertained, as we reach the peak of an extractive, industrial mindset for development - which must be replaced by technologies directed at our very survival. The impacts of climate change around the world are telling us this, in no uncertain terms. We must not tinker with this, any longer.

My concerns include :

Aboriginal heritage has not been adequately considered in the proposal, and I am advised consent has not been obtained from the Traditional Owners. In the light of recent events, this is clearly and utterly unacceptable, and beggars belief. Australia must be better than this.

The Assessment Report states "the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region." However, the project has the obvious potential to impact threatened fauna through habitat clearance, habitat fragmentation, and invasion by pest species. Habitat critical to the survival of endangered species is threatened.

Some 35 threatened species inhabit the Pilliga – amongst them, the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. What does it take for decisions to reflect these emerging imperatives?

Most importantly, the Assessment Report concludes the project would not “adversely affect groundwater” but Australia, its environment and people, rely upon the underground aquifers - indeed, the Great Artesian Basin, which supports life across inland Australia, and those of us who live beyond it . The risks of CSG drilling have caused its refusal in other countries who would not risk a fraction of the enormity of what we here propose to risk.

The reports and material you have to inform your decision are an inadequate base on which to determine that there would be no adverse risk to our environment, its flora and fauna, and ourselves.

Approving the project would, in a fair assessment, facilitate a breach of the Environmental Protection and Biodiversity Conservation (EPBC) Act.

Due to the above matters, I strongly object to the Narrabri Gas Project.

This is a decision on which there will be such enormous consequences for our country, its environment and its people, together with the whole of human society on this planet - which we cannot, simply cannot, disregard any longer, in the name of the "economy".

We must simply change direction, or our children will not thank us, nor survive.

Thank you for the opportunity to comment. I trust to hear from you in regard to this submission, but that you will consider, as you must, the implications of this proposal for the whole of Australia, and generations of its inhabitants to come.

Yours faithfully,

Robert Moore

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- It will have devastating effects on the farming, lives and livelihoods in the surrounding areas.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- The project will irreparably damage its cultural, ecological and hydrological values.

- The project brings great risk to the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

* It has significant Climate Change consequences in the opposite direction needed for this country.

Our task is to reduce greenhouse gas by more than 7 million tonnes a year, not add to emissions, as this project will do (by a million tonnes a year)

_ The local farming communities have suffered 7 years of drought and are at risk to have toxic materials in their water supply at any time from this project. They are dependent on a reliable and safe supply of ground water.

It is inhumane and irresponsible to be party to this outrage.

- The long term consequences due to the porous geology and the recharge area connected to the Great Artesian Basin will be devastating and unmanageable.

- We have the recent example of the results of the Rio Tinto project; the damage done by big corporations for a few dollars. This project will not be any different.

It will destroy lives and livelihoods.

Have the courage to do what is right for the above mentioned reasons and many more listed by other objectors.

Yours sincerely,

Zetta Michaels

Ballina, New South Wales, 2478, Australia

Subject: Narrabri Gas Project

Thank you Commissioners for the chance to lodge this objection to this project . I also spoke to you all during the electronic public hearing you may remember me when I mentioned giving up TV when big brother came along .I have been following this attempt to mine one of our natural wonders for the last nine years during that time I have visited the area many times and met many of the current and traditional custodians. These people are clearly in the overwhelming majority of the residents of the North West who strongly oppose this project going ahead on that fact alone there is obviously no social licence .You have heard from many people and experts on water ,emissions ,geology and other risks like fire and I hope climate change is a major consideration along with other aspects such as mental health (some people have been under this cloud of uncertainty for well over a decade).The risk to the environment and the water both above and below ground should be enough to use the precautionary principle .Economically it is expensive gas and to fragment another forest destroy even more biodiversity when Australia is the biggest exporter of gas in the world ,this is very hard to get your head around. The question of well integrity long after the proponent has moved on is mentioned in very fine print on page 390 of a DOPIE Assessment Report it seems to suggest that as time goes on less monitoring of wells will be required the North American experience seems to show that there is thousands of wells leaking over there .Who will be responsible for any future clean-ups if the GAB is contaminated ?

“ Of all our natural resources , water has become the most precious . In an age when man has forgotten his origins and is blind even to his most essential needs for survival ,water along with other resources has become the victim of his indifference.”(Rachel Carson ,Silent Spring 1962)

I understand those people who see this project as a economic boost to the Narrabri Region however as can be seen with the recent over tendering of the expressions of interest in the Renewable Energy Zone further south around Dubbo there is great interest in renewables and more jobs than this gas project we need jobs that don't cost the Earth. Project DRAWDOWN is a beacon of hope for the future we have all been binging on fossil fuels for long enough let this be the time that we embrace a future of hope that those who come after us are not burdened by our short sited decisions to put our land and water at risk.

“ The economic assumption that endless growth is not only necessary but possible is suicidal for any species that lives in a finite world .” (David Suzuki ,Sacred Balance)Sent from [Mail](#) for Windows 10

The time of fossil fuels is ending please do not approve this project lets leave the gas and salt where it is and put the carbon back in the ground where it belongs. You can't drink gas and there are no jobs on a dead planet. Thank you for your consideration of this request . John Simpson, Kootingal

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Given the evidence from other parts of the world and parts of our own country such as Chinchilla QLD in regards to the long term irreparable damage to underground water (in both quality and quantity) why are we even having these discussions.

What about future generations and the people who currently live outside of metropolitan areas right to access clean and safe water?

Who will be responsible for fixing the damage done to our water aquifers assuming that fixing is even possible?

Who will be responsible for devastated land values in the immediate and surrounding areas if this project goes ahead?

Who will be responsible for the demise of existing agricultural and other businesses that currently exist and that are dependent on underground water to function?

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

PLEASE DON'T LET THE SHORT TERM GAIN TO A MULTINATIONAL MINING COMPANY ALLOW THE DEMISE OF A INTERNATIONAL, NATURAL PHENOMENA THAT SUPPORTS ALL LIFE IN THIS PART OF THE WORLD. PLEASE DON'T PUT YOUR NAME TO THAT.

Yours sincerely,

Heather Simpson

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am making this submission because I care about the future for all of us including you and your children's children. We need to protect the forests and the water to ensure life can continue for our species. This project has the power to destroy precious life giving elements necessary for our future habitation. The huge amount of energy, intelligence, planning and co operation going into destruction promised by the Narrabri Gas Project can be turned around into strengthening our survival, future and culture with a longer view of profit through developing environmentally compatible energy production.

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am very concerned at the myriad of potential ramifications of this project and I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas.

☐ Over 20 years, Santos will remove 37.5 billion litres of water from deep below the Pilliga and removing this water will cause depressurisation and loss of water in the Pilliga Sandstone, the southern recharge of the Great Artesian Basin, which outcrops in the Pilliga.

☐ The model has been described by the Government's own water agency as having a "high level of inaccuracy"

1 and "not able to provide output at the scale and accuracy to assess the project's impacts against the minimal impact considerations of the Aquifer Interference

Policy”

2

. The Department of Planning’s Water Expert Panel said it was concerned the model “may have poor predictive capacity in relation to the impact of production of the surrounding impacted water sources.”

3

☒ The approach taken by the NSW Government and its experts is to grant Santos approval to proceed, and let the company drill 25 more appraisal wells while gathering baseline data to inform a more accurate upgraded model before proceeding to full development.

☒ There are serious anomalies and unknowns regarding:

o The degree to which deep aquifer dewatering for coal seam gas will disrupt recharge of the Lower Namoi Alluvium by the Pilliga Sandstone;

o The presence of faults that might accelerate movement of water or methane;

o Santos’ ability to obtain licences to account for the water the gasfield will take over decades and centuries into the future since the productive groundwater sources affected are fully allocated and have limited water trading.

☒ The Department of Planning is downplaying the importance of the Pilliga Sandstone as a recharge aquifer of the Great Artesian Basin and claims that there will be “no significant impact” but in reality, there is not enough information for them to make this claim.

Yours sincerely,

Alan Leslie

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am writing to you today to add my voice to the many Australians desperately trying to get our leaders to stand up and stop the devastating destruction of our country. I urge you to reject Santos' proposed Narrabri Garfield in the Pilliga forest.

It is difficult to believe that this project has even seen the light of day. The biodiversity and future liveability of this country is being destroyed for profit and it is us, the people, that are suffering and will continue to suffer if this is allowed to go ahead.

The Pilliga is an important area for the Gomeri people who are being discarded and ignored. We the people have had enough of this kind of treatment of our indigenous Australians and the careless destruction of their culture.

This project will destroy the water resources and ecology of this region by industrialising the area with 850 coal seam gas wells, roads, powerlines and pipelines, all that will cause irreparable, devastating damage.

In addition it will put the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers at huge risk and add almost 1 million tonnes every year to Australia's greenhouse gas emissions at a time when we desperately need to reduce our emissions, not increase them!

What will this do for the Australian people other than more destruction of our precious resources and environment? It certainly won't bring down gas or electricity prices and even if it did it would still not be worth the catastrophic destruction.

Enough. We the people have had enough and will not stand for this any longer. Santos and the authorities that continue to let them get away with all manner of destruction here in Australia can no longer be accepted.

We want our children to have a future.

Subject: I OBJECT to the Narrabri Gas Project in the Pilliga

Dear Independent Planning Commission,

Please include my name and submission on your website.

I am making this submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The surrounding habitats are unique. Habitat that after last summers devastation have taken on much more significant importance. We can not allow this area to be degraded moving forward. This is the most unpopular development ever proposed in this States history and for good reason. It has bought together farmers business people and environmentalists in an almost unanimous chorus of concern and disapproval. Any recommendation other than to reject this development will lead to widespread disapproval and disruption and will not be the end of the matter. Now is the time to listen to the will of the people and not the vested interests and short term profiteers. All of the evidence now points to renewables being the way of the future. Any capitulation to the old guard will inhibit and frustrate our move towards a cleaner future. One in which Australia can lead the world along with all it's jobs and investment. Be forward thinking. Be part of the solution to our climate problems. Reject the proposal to allow gas exploitation in the Pilliga.

For the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment and to be part of a positive outcome. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I urge you to reject due to climate change,

global warming,

inter generational equity, a groundswell of public opposition,

food and water security for locals and the broader community, biodiversity of the Pilliga ecosystem and also its value as a Carbon sink,

the politics of the day and past that has prioritized coal seam gas expansion and profits for the few over the environment and public good and renewable energy technologies

and the evidence of failure of previous fracking operations globally that have failed to protect the environment and allowed Methane to escape into the atmosphere further adding to increased global warming.

I support the Lock the Gate Movement and am grateful for their hard work and dedication.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Policy”

2

. The Department of Planning’s Water Expert Panel said it was concerned the model “may have poor predictive capacity in relation to the impact of production of the surrounding impacted water sources.”

3

☒ The approach taken by the NSW Government and its experts is to grant Santos approval to proceed, and let the company drill 25 more appraisal wells while gathering baseline data to inform a more accurate upgraded model before proceeding to full development.

☒ There are serious anomalies and unknowns regarding:

o The degree to which deep aquifer dewatering for coal seam gas will disrupt recharge of the Lower Namoi Alluvium by the Pilliga Sandstone;

o The presence of faults that might accelerate movement of water or methane;

o Santos’ ability to obtain licences to account for the water the gasfield will take over decades and centuries into the future since the productive groundwater sources affected are fully allocated and have limited water trading.

☒ The Department of Planning is downplaying the importance of the Pilliga Sandstone as a recharge aquifer of the Great Artesian Basin and claims that there will be “no significant impact” but in reality, there is not enough information for them to make this claim.

Yours sincerely,

Dr Jim Kearns

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As a proud Australian Citizen who has visited sites around Pilliga and Warrenbungle NP in the Great Artesian Basin as well as several unique natural places that constitute amazing aspects of the Australian landscape, habitat and environments as well as the water that gives these places life. Please don't sacrifice these assets to retrieve resources which could be better left for future generations if the renewable tech we should be utilizing suffers and damage or when there are safer drilling technologies. I am of the opinion and will follow this up, that the government and private sector cannot in good conscience go through with this proposal. The chief scientists recommendations have not been anywhere near fully implemented and opposition to this project is at 98%! This is not good enough and a betrayal of due process, Australian people and traditional livelihoods, culture and heritage.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Brent Sheekey

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Once CSG damage is done to our surrounding farmland and water it can not be repaired. This then has a catastrophic impact on our societies' health and well being. I don't understand how our government or Santos could even consider this being an option?

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

In addition, while the Assessment Report states the project to be "critical for energy reliability and security" we do not have a gas shortage especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal. The modification to the original Development Consent will satisfy the market need for more gas during the cooler winter months.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

In 1968, I had just finished school, and travelled through the Pilliga forest. I had grown up in Harden and was struck by the contrast in the environment. The Pilliga forest had a raw and rugged beauty, and reading about the development of the Gas Project I feel compelled to object to any further development in the forest.

The concern for water is great in Australia and particularly in that area, where the Great Artesian Basin is recharged combined with a domestic and farming need. Not only will the mining require vast quantities of water, it will also produce waste, containing salt and metals and for which Santos has no plan. .

The loss of habitat also threatens local fauna such as pygmy possum, koalas and the Pilliga mouse. At a time when drought and fire are so frequent.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a concerned citizen, extremely worried about threats to the natural world. The major threats as I see them are climate change and habitat loss. Terrible plastic pollution is also a major threat but that is another issue.

We can not control earthquakes, volcanoes and meteor collisions but we can control what we, as human beings, do. Every action we take has consequences and fracking for gas has to be one of the worst actions. Anywhere. Let alone in an area as environmentally sensitive as the Pilliga. For a product which increases greenhouse gas emissions, while potentially poisoning life-supporting aquifers.

The Pilliga is home to many threatened species. Threatened with extinction that is. Why increase that threat? Extinction is a choice. Why choose it?

Fossil fuels of all kinds will eventually be replaced by renewable sources of energy. That is the future.

I recently read a report of leakage from gas wells worldwide which exposed the fact that enormous amounts of methane are escaping into the atmosphere. As methane is many times more potent a greenhouse gas than carbon dioxide, this is a great concern. It is impossible to guarantee nil leakage as the gas will make its way to the surface through the fractured rock. The fractured rock must also cause downward leakage of groundwater. Huge amounts of water and salt are used in the fracking process which is a profligate use of a precious resource to produce an unusable, polluting byproduct which has to be disposed of safely - an oxymoron.

I could go on but I'm sure you've heard all objections many times.

I strongly object to the Narrabri Gas Project. I would love to see what is left of our natural world saved and protected - while we can. Extinction is forever. We are only one species in an incredibly beautiful and complex world. We can choose to save it rather than destroy it.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sent: Sunday, 9 August 2020 2:04 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You are welcome to include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

In summary, I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Not least, the proposed SANTOS development, if approved, would allow for dozens of wells throughout the area to access deeply embedded coal seam gas for short-term corporate profit, whilst permanently compromising the historic productivity of this State's critical grazing and agricultural activities and irreversibly ravaging the fauna and flora of thousands of hectares of the Pilliga.

An equally troubling concern is that CSG processes are demonstrably shown to require indefensible quantities of water and that there would be a very real risk that aquifers would be contaminated should the project proceed, forever polluting the deep water reserves of this driest of continents.

Whilst accepting that the deliberations of the Commission are unlikely to be influenced by the multitude of ad hominem arguments that many of us share, I must add that my own family of seventh-generation Australians has urged me to implore Commissioners not to approve the SANTOS Narrabri proposal so that we might all continue to be self sufficient in food and fibre and water in this State whilst developing better and more sustainable alternatives to fossil fuels.

We understand that the NSW Premier and the Prime Minister are now committed to fast-tracking bushfire and COVID recovery by drawing on the advice of mining interests to the exclusion of all else. More and more Australians do not support their approach. The relevant science is easily accessible and has been so well-referenced through years of widespread community concern about this proposed development that it need not be cited again. Sufficient to add that I strongly object to the Narrabri Gas Project; that I appreciate the opportunity to comment and that I anxiously await the outcome.

Yours sincerely,

Susan Elfert
Katoomba, New South Wales, 2780, Australia

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

The target coal seams for the Narrabri Gas Project are underneath aquifers that supply important sources of water for agriculture and domestic use and are important recharge zones for the Great Artesian Basin. The gas extraction depressurizes gas bearing ecological formations and could potentially cause groundwater levels to decline which can impact on water users.

At this point there remains important uncertainties and knowledge gaps in relation to groundwater risks. Important relevant information and data is lacking or has not been taken into consideration – including recently published peer reviewed research with significant findings regarding inter-aquifer connectivity.

In its assessment report, the Department has adopted an approach that such issues can be dealt with after the Project approval. Such an approach is inconsistent with the precautionary principle.

Contamination of groundwater and surface water are major environmental risks that require careful management in any unconventional gas operation, including the extraction of gas from coal seams.

Thus I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commissioners

Re: Narrabri Gas Project

I am totally opposed to the proposed Narrabri Gas Project.

While I live in an urban environment I am still deeply concerned about the impacts this mine will have on the wider Australian environment.

I have listened to many highly qualified speakers at the public hearing over the past weeks and have been greatly impressed by the depth of knowledge and skills many of these speakers have demonstrated. They have shown without a doubt why this mine presents such risks to the water supply, threatened species, Aboriginal heritage, the native forests etc. I can only add my voice to these arguments and pleas to not allow this project to proceed.

As a grandmother I am deeply concerned about the state of the environment that we will be leaving to my grandchildren's generation. We have already seen the devastating effects climate change is already having. The recent bushfires in NSW are a prime example. The mining of this fossil fuel will be a further contributor to climate change at a time when it makes more sense to invest in renewable energies.

Thank you for the opportunity to comment on this proposal.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to OK Santos' proposed Narrabri gasfield in the Pilliga forest.

Then try to sleep at night knowing that our children and grandchildren including your own will be left to deal with the long term and ongoing damage of an important farming, ecological and cultural area for a fleeting short term injection of money into the States coffers.

The cost of this project to the State and to Australia as a whole greatly outweighs its benefits

Yours sincerely,

Alan Fisher

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

It is with a heavy heart that I hear of more and more fossil fuel projects being approved that will undermine the livability of our planet. This is madness, we are the only species on the planet that destroys it's own environment and unfortunately we are taking all the other life forms with us as massive extinctions roll on.

Pleasereject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Susan Douglas

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

This is just one of many bad ideas that the fossil fuel industry has come up with, that will result in the degradation of the environment without even having a significant positive, lasting impact on the local community.

Like all fossil fuel companies, Santos will rape the natural resources, destroy the fragile ecosystem of the Pilliga and then move on without a thought for the hard working local people who will be left to pick up the pieces.

As a young person who will have to deal with the future impacts of this project if it goes ahead, I implore you to use the chance you have to positively affect the future of Australia's most valuable natural resource, our water, and deny Santos' application.

Yours sincerely,

Sent: Sunday, 9 August 2020 11:49 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest for the following reasons:

- The Pilliga is uniquely important for biodiversity and water resources. Any fossil fuels that are extracted within this area will have a multi generational impact on future resources and the environment.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values. This cannot be allowed to happen as it is sacrificing the countries future for a short term benefit.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. Not enough is currently known about the artesian aquifers, and Santos has used a basic water water impact example. This is not sufficient for long term planning.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Peter Pearson

From: Brenda Mattick <campaigns@good.do>
Sent: Sunday, 9 August 2020 11:19 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

According to the CSIRO, "What are some of the other potential environmental impacts of CSG extraction?"

Removing large amounts of formation water from a coal seam decreases the water pressure within layers containing coal seam gas. Where coal seams come near the surface, connectivity between the seam and confined aquifers or alluvium can lead to a lowering of water pressure in aquifers or water tables in alluvium. In shale gas production, access to and use of freshwater sources for hydraulic fracturing can compete with other water users including agriculture and human water use. Utilisation of non-potable sources of water for hydraulic fracturing can reduce these impacts. Other potential environmental impacts include the industry's potential greenhouse gas footprint, possible fragmenting of local habitat, changes to agricultural landscapes and economic and social impacts on rural communities."

The people of Narrabri (and Australia) have good reason to reject the proposed gasfield in the Pilliga forest.

Thousands of Gomeri people, farmers, conservationists and townspeople are making submissions. They claim that:

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Renewable sources such as solar and wind are much better investments for all Australians (and everyone on this planet).

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Members of my family live close to the Pilliga Forest and I have had a close connection with it for many years. As an orchid biologist, I am very concerned about the impact on this unique ecosystem. The Pilliga Forest is the largest remaining continuous remnant of semi-arid woodland in NSW, and is recognised as one of the most important areas for biodiversity in eastern Australia. It is home to more than 350 species of birds, mammals, reptiles and frogs, and numerous vulnerable and endangered plant species in endangered ecological communities. These ecological communities include insect pollinators and mycorrhizal fungal associations, which are particularly vulnerable to clearing, traffic pressure and fire, and are often overlooked in assessing ecological threats to communities.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. Much less visible to most people are the vulnerable herbaceous plant communities that mammal, reptile, bird and insect species rely on. Through the direct impact of clearing, and the consequences of increased risk of fire and habitat fragmentation, this project threatens to destroy vulnerable ecosystems that include endangered orchid species. Orchids are some of the most highly evolved members of the plant community and are often sparsely distributed, due to their unique and critical relationships with pollinating insects and mycorrhizal fungi - this means that they require much more area of habitat to ensure their survival. It's not enough to protect the immediate area around an endangered orchid population.

In addition, Aboriginal heritage has not been adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding "areas of high cultural heritage value to local

Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

Despite this, the Assessment Report concludes the project would not “adversely affect groundwater”. Australia is the driest inhabited continent on earth, and we cannot afford to gamble with our water. Surely the recent years of unremitting drought and fires have emphasised this! Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I live in the Narrabri district and I object to the Narrabri Gas Project

This project will cause many bad environmental outcomes and will not lead to Cheeper gas prices

Climate Change is only going to increase our reliance on groundwater in this area of NSW . Not only will this project deplete aquifers it also risks permanent damage and Contamination of this precious resource farming communities rely on

The Narrabri Gas project will not be viable without government subsidy, as a result further pressure for approvals for Santos to frack and expand its area and the number of wells will be fourth coming. This would be very undesirable and lead to further environmental damage.

Renewable energy alternatives are becoming more affordable and could provide Similar employment opportunities in our region and could be continually rolled out as technologies evolve. The environmental foot print of such projects can be accurately forecast with very few unknowns.

So in conclusion we need to consider do we want to produce energy that is not actually that cheap and also comes with Environmental cost of unknown proportions both locally and Globally.

Or do we act now to increase our children's prospects and reduce environmental damage by producing cheaper renewable energy and set our community up for the futurel urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomerioi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Sent: Sunday, 9 August 2020 10:43 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I strongly object to the outrageous Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. Please, please go into this area, speak to the farmer who know this land better than your government.

Water is life and if there is something we are all learning from COVID is the importance to wash, wash hands, wash equipment, was everything. We already know how the fracking process contaminated underground water so it's a no brainer to protect our water resources above all else. Risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers is just Environmental sabotage on many levels.

-Apart from being home to many species and a great place to connect with nature the Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. We are constantly reminded, especially in recent times, just how climate change is going to heat up the planet making all water sauces more in demand to sustain all life on this very dry continent.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Renewables energy should be a funding priority to create new jobs while healing the planet. Please re think what Santos is proposing. It's so very wrong on many levels.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Wouldnt it be common sense not to frack land which is used for growing a large portion of our food like potatoes and peanuts ?

Where are your priorities, how will the future look ?

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Marie Bliss

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

I have spent the whole week watching the 420 speakers talk before you.

Almost all object to this to this gas feild.

The speaker that most affected me was the emotions of the Elder Gomeroi woman Maria Cutmore. This passionate plea of Maria Cutmore sums up the deep connection to the indigenous peopel to their land. We are living in changing time.

Please lead the way.

Sincerely
Rini Fokas

Sent: Sunday, 9 August 2020 10:12 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am familiar with the area as my sister lived in Narrabri during the 1990s to 2000s. We visited the Pilliga with her and her family and overseas visitors on an extraordinary experience to see koalas. We did see them in their natural habitat after a long and dusty drive in this most amazing landscape.

I am concerned over the loss of habitat for koalas and all native animals that call this temperate woodland their home. The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

I am concerned over the impact on the Great Artesian Basin which if damaged or polluted will never be able to be recovered. I am concerned that we cannot manage the Murray-Darling Basin at present yet we are willing to risk another impact on our water sources. The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

I am concerned over the lack of approval from indigenous people and that consideration for their heritage and connection to this unique area is not being treated with genuine respect. We have recently had the fiasco in Western Australia in the demolition of irreplaceable cave sites, that should cause us all to pause and reconsider how we manage our cultural heritage. Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

Narrabri has the potential to provide solar power as an alternative source that would provide industry and an ongoing and renewable energy alternative. Coal seam gas is just not in our best interests and its impact is like any industry it can never be undone. Our natural environment of the Pilliga will not be restored if this project goes ahead. There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: objection to the proposal for a Santos Narrabri gas project

Dear Commissioners, I write to call on you to uphold the public interest by rejecting the Santos' Narrabri gas project proposal. Clearly, there has been deep and widespread local opposition to this project. I write as someone from outside this community who • supports its concerns, and also as someone who is • concerned about the broader impacts of the proposed project. The Great Artesian Basin is one of a small number of places like the Reef that have gained the title 'Great'. What would it mean to approve a project that would inject in excess of 10,000 tonnes of toxic chemicals into these waterways? Santos seems to have a very blinkered view of what constitutes a "benefit" to the community. A decision to approve the project would be a decision to approve a huge array of coal seam gas wells across a region that local people care about, ranging from traditional owners to those who —like me—have come here more recently. It is also a place which tourists want to visit and enjoy, and not just tourists — a friend of mine has recently moved to the area. It is known as a great place to live. _____

Thinking of the kinds of bushfires that occurred in 2019-2020, and the coastal erosion that is happening in NSW right now (making headlines even on CNN: <https://edition.cnn.com/2020/07/21/australia/australia-coastal-erosion-homes-intl-hnk-scli/index.html>) —you will be aware of the climate science. The Santos proposal would add nearly 1 million tonnes to Australia's greenhouse gas emissions annually. As you will have been advised, we instead need to reduce emissions by more than 7 million tonnes a year. The debates about whether a particularly damaging bushfire season or the subsiding land at Wamberal Beach are "caused by climate change" are beside the point. Clearly, the whole issue with climate change is that we face the prospect of *more events like these, more often*. Therefore, whether we are members of the NSW Independent Planning Commission or citizens more broadly, we are in the position of • holding a "fiduciary" duty towards the young people of today, their kids, and their kids' kids. • being risk managers:

When warned, we don't board an aircraft if advised it is unsafe, even if it might not actually crash. We don't cross, build or work on a bridge when the signs point to the risk it could collapse. When we receive medical advice that continuing a particular form of behaviour will put us at risk of serious illness or death, we ignore the doctors at our peril... I submit that:

- the warnings about climate change are clear, and have been for a long time.
- the principles of risk management and the analogies of boarding aircraft / building or crossing bridges / heeding medical advice apply • on these and other grounds, the Santos request for approval of this project needs to be denied.

Thinking of the road sign that says "Wrong Way: Go Back" — it is put there for a good reason, and we would not want to ignore it in pursuit of whatever goals we might have in going down that road.

Yours sincerely, Don McArthur

Subject: Protect the Pilliga Forest

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

canan tzelil,
3000

Subject: Objection to the Narrabri gas field project

Dear Commissioners,

As a member of the general public, i strongly object to Santos' proposed Narrabri Gasfield in the Pilliga forest and urge you to stop this disastrous project.

The Pilliga provides biodiversity and water for the Gomeroi people - resources that would be under threat if this project went ahead.

How would 850 coal seam gas wells, roads, power lines and pipelines benefit local population in view of what we know about degradation and climate change.

Enormous amounts of water and toxic salts will be discharged risking the Great Artesian Basin amongst other local aquifers.

Lastly the gas field will add 1 million tonnes to Australia's greenhouse gas emissions in contrast to reducing it!

Will it bring down electricity prices! No!

Please do not approve this detrimental project.

Yours sincerely,

Caroline de Jongh

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- As a scientist I have thoroughly researched the adverse impacts of CSG and believe we should follow the principle of caution when considering the use of fracking in Australia.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Judy Plath

Bundaberg, Queensland, 4670, Australia

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am a well established farmer in the Narrabri Shire as well as the neighbouring Moree Shire.

I do not support the Santos Narrabri gas project.

The water resources are threatened by the project.

My ability to farm will be jeopardised by the industrialisation of the Shire. Industrialising the Narrabri Shire with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

The project will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

And it won't even bring down gas or electricity prices for Aussies!

The main street of Narrabri has not experienced an economic boom to the town or the shop owners. Have you seen how many shopfronts are empty? Miners do not day to day shop in town. Miners don't buy dresses, books, homewares, fabrics in the town. They are fly in fly out drive in drive out. They have families elsewhere and this is where the money goes.

If you want industry value add to agriculture and family owned farms. To the people who support Narrabri day in day out decade after decade.

We produce the food for the nation and the world and this is what is needed now not industrialised gas fields that undermine our water and ability to farm. We can not co-exist. I strongly object as a local to the project.

Yours sincerely,

Robert Blatchford

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As a Narrabri Shire resident and family owner of farm land I strongly object to the Narrabri Gas Project.

I am a young farmer at Narrabri and my parents own a farm. It is my desire to continue to farm and I do not believe that gasfields and mining can co-exist with broadacre agriculture. I also believe the risk to our water resources and the great artesian basin is too great to risk.

Its my future you are playing with and I will be voting in the next elections that support renewables and protect our water resources and agriculture.

The pandemic has highlighted just how important essential industries are and a front runner is farmers producing food.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

The gasfields will not be contained to the Pilliga - the industry are like drug users and can not be satisfied with one area - once the gas is depleted from one field just like a drug user it moves on for its next closest hit and again like a drug user can not stop and will do whatever it takes to get to the next field regardless of its use especially high producing productive agricultural lands.

STOP COAL SEAM GAS AND STOP THE PILLIGA GAS SANTOS PROJECT.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I object to the disruption and depletion of the Pilliga artesian water. Driving through southern Queensland I have seen the disastrous effects of coal seam gas on the landscape. The water allows the environment to flourish and give life. Much of it accumulated over millennia and will be exhausted rapidly for short-term profit. Further, Santos has not adequately answered questions regarding how they propose to ameliorate problems with disposal of salt extracted from the water.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Rima D'Arcy

From: Carolyn Dow <campaigns@good.do>
Sent: Sunday, 9 August 2020 8:58 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I strongly object to the short-sighted, unsustainable and dangerous project proposal for Santos to mine coal seam gas in the Narrabri region and Pilliga Forest. While I currently live in suburban Sydney, I was born, bred and identify with Kamilaroi land. A brief outline of my main objections follows.

Looking Back not Forward

All nations should be investing in long-term, technologically advanced, affordable, sustainable and planet-friendly energy. Energy production currently (including this proposal) leaves a legacy that future generations may not be able to reverse or recover from individually, collectively or sustain life on the planet.

Australia is ideally suited to develop and sell the technology for a cleaner, greener future instead.

Water

Clean and safe water resources are essential to ensuring an ecological balance, sustainable industries and servicing livelihoods in agriculture, tourism, hospitality and manufacturing within the region and beyond.

- Depletion and contamination of local water resources in an area of historically low and erratic rainfall, made increasingly so with climate change.
- Contamination of ground water with heavy metals into the (currently) "Great" Artesian Basin under 22% of Australia's mainland.
- During exploration to date, leaks and spillages have occurred, further drilling depths are calculated estimates and therefore unknown.
- Leeching into aquifers would be irreversibly permanent.
- Disposal of contaminants has not been satisfactorily addressed.

Climate Change Emissions and Costs

- Australia is already lagging behind in reducing its Greenhouse Gas emission targets. Non-sustainable burning of carbon- and methane-dense fossil fuels is a well-documented greenhouse gas contributor in rapidly increasing climate change across the planet.

- This change has led to further escalating high temperature records, ice and permafrost thawing and major impacts on food production to name a few.
- CSG extraction from the Pilliga would not provide direct financial benefits to the Australian population, but would increase the rate of greenhouse gas emissions.

Bushfires through Climate Change and Burning Flares

- Uncontrollable local and international bushfires are adding enormous financial, personal and ecological costs in both fighting, and recovering from, those events.
- The Pilliga Forest has a long, naturally occurring, bushfire history of events and difficulty in control. Adding CSG burning flares to that history would be catastrophic to the Pilliga landscape, flora and fauna and wider area.

Indigenous History

Recent destruction of irreplaceable indigenous history and artefacts elsewhere demonstrates the lack of diligence and stewardship across the mining industry. A comprehensive listing of currently undiscovered and researched sites, artefacts and their interconnected significance has not been undertaken, therefore no plan for protecting such treasures has been devised to put into action.

Employment and Health

Claims of increased local employment in a 5-year non-sustainable project are unlikely to be fulfilled. If they were, other occupations would be stripped of workers. However, Santos (or any) mining company would draw from the large pool of skilled and experienced workers in coal and gas extraction specifically, or mining generally. As roughly 42% of chemicals used in CSG extraction is hazardous. even with experience, using and transporting those chemicals has endangered the health of workers and wider public in an already 'Uninsurable' industry.

Local ecology

Fracturing pockets of the Pilliga Forest with mining would greatly harm the interactive balance to the current diversity and already threatened species of flora and fauna, including koalas.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I'm the mother of two boys, a farmer and a business manager. I worry about the health of our planet and what kind of condition we are leaving it in for our children, and future generations. We need clean air, water and food to be healthy humans. Coal Seam Gas does not ensure the health of humans or the planet.

Exploiting gas reserves comes at a dangerous environmental cost, and is certainly not the only option when it comes to providing for our energy and economic needs. Australia is the sunniest continent on earth, and we have an opportunity to not only fuel our economy, but our energy needs through innovation in renewable energy. We need to prevent a climate catastrophe, not continue to fuel it!

The people of Narrabri are overwhelmingly against this project going ahead, as are the people of Australia. The bushland of the Pilliga is worth protecting in its own right. We cannot continue to destroy and exploit our environment in the name of jobs and growth. There are more jobs to be made in expanding renewable energy, and we don't need to trash this wonderful country in order to do that.

I ask you, what legacy do we want to leave for future generations?

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Commissioners,

Please listen to the Indigenous people and local farmers that are directly impacted by CSG fracking and the generations that will have to live with your decision for many decades.

NSW does not need CSG for domestic use and renewable resources are already proving cheaper with strong interest in solar and wind.

These gas fields WILL have an effect on the underground water resources that are vital for all Australians and the unknown consequences are too risky to allow 850 wells to fracture the earth by using chemicals and draw coal seam gas for explicit reason of making profits.

To: IPCN Enquiries Mailbox
Subject: Submission: We strongly object to the Narrabri gas project proposed by Santos for a variety of concerning reasons we believe will expose us and future generations to significant environmental and climate risks that simply are not manageable to safeguar...

Dear Commissioners,

We struggle to understand why the Santos' proposed Narrabri gasfield in the Pilliga forest should be approved. Doing so we believe will very likely compromise the long term sustainability of the water table, thereby FOREVER exposing the wider public to increased methane emissions. This will pose significant environmental and climate risks which will further add bushfire risks in the Pilliga and make the next generation victims of environmental damage because the risks associated with this proposed industrialised gasfield are simply not manageable. Frankly the devastating risks associated with the toxic waste disposal of thousands of tons of salt is more than problematic when one considers the recent explosions of ammonium nitrate in Lebanon. Where indeed will these toxic salts be dumped??? To impose this on north west NSW is more than apocalyptic and simply not in the public interest when all the risk assessments and data are carefully examined. A salt waste management

plan will be required if Santos gets a green light, however, it is more than problematic when one considers the impact it could have on the Great Artesian Basin aquifers underneath. We think the Precautionary principle has to be strongly considered regarding this.

Professor John Williams (TPP Water scientist) research that 'drilling and geological data places groundwater resources at an unacceptable risk' should be heeded as drilling through layers of rock and sandstone may well compromise the hydrological structures that maintain vast aquifers beds in the Great Artesian Basin which supply water for livestock and crop irrigation that may well lead to eventual water loss and salt wastes containing heavy metals and contaminants.

Santos, however, say there is little inter connectivity of gas movement into acquirers, yet how do they explain significant levels of methane in groundwater samples from aquifers overlying coal seams and data indicating geological structures provide pathways for gas movement into these aquifers. Santos are unable to give a cast iron guarantee that there will be no water table destruction and that we will not become victims of vast environmental damage and heath related problems down the track because our water will be forever compromised if this project is approved.

Investment is flooding into renewable energy while the gas industry is contracting and bleeding red ink. Why should everyday Australians sponsor or prop up the gas industry with tax payer subsidies??? Trusting the gas industry to lead Australia's economic recovery post CV19 is poor economic policy as it is one of the least job intensive industries and we will lose far more than we gain if this project is given a green light. We also would like to know if the Voluntary Planning Agreement Funds promised by Santis have been properly audited???

Aside from the disturbing concerns of risks this proposed Santos gas project poses to the Great Artesian Basin aquifer system ,the Pilliga is uniquely important for Gomerioi people, biodiversity and water resources for us all. Why place this all at risk when there is now a growing surge of global opposition to all fossil fuels because the risks have in the past not been manageable??? Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

This Narrabri gasfield in the Pilliga forest will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.why would you allow this to happen on your watch ????

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. We also might well ask will it really bring down gas or electricity prices for Aussies or will Santos simply create an industrialised gasfield that risks soil, precious water, air and our health???

Our opinion is that the Santos gasfield project should be refused to ensure precious water of the the Great Artesian Basin remains untainted for our communities, farmers, and environment into the future.To impose this on north western NSW is apocalyptic and will bring catastrophic risks to our ecosystems which will be felt far and wide...and for future generations it may well be a death sentence.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: we need to leave the recharge zone undisturbed and also what little is left of native forest. If we can close down a planet to stop Corona virus spreading surely we can find a better way of obtaining energy for our needs or reduce them to a sustainable level.

I don't have the educational level to argue the scientific and cultural reasons to appose this plan but I strongly support those that do.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Further, the Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Finally, an October 2019 report from Pegasus Economics states solar and wind power is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity. These are the alternatives we should be pursuing for a sustainable energy future.

As such, I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Jason Gibbs

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

We have road trip holidays in the country, we love the beautiful towns, the forest, the farmlands, the produce and clean air and the quiet environment.

These things cannot be bought and will be destroyed by 850 gas wells.

Yours sincerely,

Kim and Richard Salmon

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Why do we keep destroying the health of our country and the climate ? Surely we have the intelligence to stop the ignorant activities that in the past we did not have the knowledge of that we have now ?

Why don't we start thinking of what we will leave the future generations ? We are seriously running the risk of becoming a third world country with all the destructive activities that our leaders continue to give permission to.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sent: Sunday, 9 August 2020 6:26 AM
To: IPCN Enquiries Mailbox
Subject: Opposition to the Narrabri Gas Project

Dear Committee Members

I am writing to voice my concerns and strong opposition to the proposed Narrabri Gas Project. I am fine for you to publicly share my name and submission on your website if/as needed.

For the past twenty years, I have worked with an organization that helps 750+ global brands - including H&M, Penquin - Random House, Target,... - to develop and implement sustainability initiatives. I and my colleagues work closely with these companies to develop ambitious sustainability goals grounded in the ecological realities of our time and their business needs. We then support them to implement systems and change their sourcing practices and operations to ensure they achieve those targets. Through this work, we track which jurisdictions are leaders in sustainability - particularly in the areas of climate and biodiversity.

The proposed Narrabri Gas Project is completely out of step with where these companies and the rest of the world is heading. Leading companies are setting and making substantive progress on ambitious climate and biodiversity targets. This project directly undermines both of these critical environmental areas. As Europe and many other nations move towards meeting the majority of their energy needs with renewables, this project will move Australia further down a carbon-heavy path and at the expense of Australia's native species, water quality, indigenous people, inland communities, water/food security and international reputation.

Here are some of my primary concerns with the Narrabri Gas Project:

- Lack of Free Prior and Informed Consent - The lack of consent from the Gamilaraay people, the traditional owners of this land, should be a show stopper for this project. Additionally, from all credible accounts, assessments by the company of local Aboriginal heritage are inadequate and fail to recognize the landscape level connection and importance of the Pilliga to Gamilaraay culture and tradition.
- Impacts on Water and Inland Communities and Farms - Given Australia's problems with salinization, this project's proposed disposal of its associated salt waste is completely inadequate. Chances are high that salt waste will leach from the proposed landfill and contaminate groundwater, farmlands and ecosystems. It's an unacceptable risk. Additional to salinization, there is the broader issue of likely impacts on groundwater. Given the importance of aquifers like the Great Artesian Basin in supporting life across inland Australia and its increased importance as droughts become longer and more intense with climate change, it would be unwise to allow any drilling in this region. Studies to date are inadequate and unable to thoroughly rule out the risk to groundwater.

- Increased Fire Risk - The Narrabri Gas Project poses a serious bushfire risk due to the highly flammable nature of its infrastructure. The Assessment Report does not adequately account for how this risk will be managed and frankly after this past year of bushfires we should be looking to mitigate any existing causes not introduce new ones.

- Loss of Habitat and Biodiversity – As you know, the Pilliga is the largest temperate woodland in NSW. Santos is proposing to clear nearly 1,000 hectares of the Pilliga at a time when leading global climate scientists are unanimously calling for the protection, conservation, and where needed, restoration, of 30 – 50% of the world’s forests by 2030 (as forests represent 30% of the climate solution). Priority is placed on keeping native forests standing, and as such the Pilliga should not be logged or fragmented for this project, rather it should be conserved. Maintaining the native forests of the Pilliga is also critical habitat for numerous threatened and endangered species including the critically endangered Regent honeyeater, koalas who have already lost 30% of their habitat within NSW in the 2019/20 summer fires, the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. The construction of roads and other infrastructure will fragment and destroy critic

al habitat and will introduce predators. The lack of baseline surveys for endemic species seems as though it will automatically place this project in contravention of NSW’s environmental laws.

- Redundant Carbon Intensive Energy - With the NSW Government’s approval of additional production capacity of the Port Kembla Gas Terminal, there is no need for the Narrabri Gas Project. NSW’s need for gas will be met by the Port Kembla increase and hence the Narrabri Gas Project will be redundant. When considering energy production more broadly, renewables such as solar and wind are now at parity or cheaper than fossil fuel generated energy in many parts of the world including the USA, Canada, Europe. As one of the countries that is, and will continue to be, most adversely affected by climate change, we should be especially motivated to not bring online new carbon intensive infrastructure.

In this turn around decade for our planet and humanity, we must do better. There is no need for this energy source given other energy infrastructure that is advancing in the state. And besides that, we are smarter than using dirty 18th century technology when cleaner energy alternatives exist.

The Narrabri Gas Project presents unacceptable risks to inland communities, farmlands, Aboriginal people and their cultural wellbeing, native flora and fauna, and our global climate. I call upon you to decline this application.

Thank you for this opportunity to comment. I look forward to hearing back from you.

Sincerely,

Nicole Rycroft

Dear Commissioners,

Are we the most stupid animals on the planet?

We foul our own nests, we foul everyone else's nest, and we are so short sighted as to assume someone else will clean up after us.

One of the reasons that cars were such a boon in the early 20th Century, was because the big cities couldn't handle the mountains of horse poo that they were accumulating.

Now we face the same problem with fossil fuels! Do we have a vision for our children and grand-children? Or are we so duped by the almighty dollar, that we will sell our souls for one night in Paradise, and the devil take the rest?

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomerioi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. Water is such an important commodity in these times of unpredictable rain fall and environmental and seasonal unsurety.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Kirsty Edwards

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impact .

I am concerned about the daily salt residue, leaching into the ground water, contaminating it

The area where the wells will be, will then be unusable for agriculture

and/or habitat for native fauna . We have already lost so many animals and birds to the bushfires of last summer,we dont need to lose more..There are a number of threatened or endangered species eg the Black Stripe Wallaby, Koala, Pilliga mouse, whose habitat will be destroyed or severely disturbed.

The gas is forecast to not be any cheaper than any other in NSW

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Rose Baxter

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

If we are serious about preventing runaway climate change we must not approve any new fossil fuel extraction. To approve this project is to ignore what the science is telling us. REDUCE THE BURNING OF FOSSIL FUELS!! Are we going to heed this advice or just continue to do the same old. This last summer surely has shown us the consequences of inaction on emission reduction.

Bushfires the ferocity of which we haven't seen over such a huge area. The fires were preceded by a lengthy drought also predicted by climate scientists. I have been shocked by the number of trees that have just died in the bush where I live from lack of water. The warning signs of a climate catastrophe are here I believe and governments need to move to renewables with greater haste.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Nature is at a tipping point- our country is drying out due to decades of unbridled development, rampant land clearing, climate change and the savageness of the recent bushfires. All over the country, biodiversity is threatened like never before- and the Pilliga is no exception.

The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources. It must be protected from industrialisation by an industry that we don't need and that will create huge problems with saline waste as well as consume megalitres of water.

We need to treat water like the precious resource that it is and which we need for drinking, washing, growing food and raising livestock. We must not squander it on an industry that is polluting and won't even reduce the price of gas for Australians.

The proposed gasfield will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when we need to be reducing emissions by more than 7 million tonnes a year.

Please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Re: Submission re Narrabri Gas Project

Privatisation of wealth. Socialisation of costs

Dear Commissioners,

My reasons for objecting to the proposed Narrabri Gas Project include:

1. The local Community is against it. The Majority says no to coal seam gas.

2. Risk to ground water. Imagine what it must be like to be in a farmer in the Pilliga, utterly dependant on aquifers for your livelihood, living 'under the sword' of 850 wells potentially leaking highly toxic material into the water supply at any time. CSG has created elevated rates of stress and mental illness wherever it operates in farming communities and the Pilliga is particularly vulnerable due to its dependence on a reliable supply of groundwater. Though I do not live in the Pilliga, I do depend on bore water during our dry season and there have been occasions (noticeably last year) when our bore was contaminated from 'upstream' spraying in our catchment area. This is bad for our produce but worse is the mental stress of not knowing whether we can trust our water supply. This is an inkling of what the farming community in the Pilliga will have to deal with.

3. Short term Gain. Long term Pain. The project carries unmanageable long-term consequences due to unique geology of the area which is porous, and a recharge area connected to the Great Artesian Basin. Santos's test wells have already leaked and they had to be forced to admit their failures rather than coming clean when it the leaks occurred. Santos's modelling of the impacts of its operations is low-level and both science and experience show that leaks are inevitable.

If Santos were prepared to pay a bond to cover the costs of maintaining the capped wells and repairing any leaks for the next 500 years then sure, let it go ahead, but Santos won't, and they can't because the cost of fixing even one leaking pipe hundreds of feet underground is astronomical, never mind 850 of them..

Therefore, this project is a privatisation of profits, which Santos and its shareholders will take, and a socialisation of costs, which the NSW taxpayer and the Pilliga community will bear for decades (if not centuries) after the wells are capped and Santos has left town.

4. Unfavourable comparison to other gas projects:

If you're going to drill a single well into a offshore massive gas deposit (conventional gas) and extract large quantities for the next 30- 50 years, all the while having enough money to keep an eye on things (and shut it down properly) that's one thing. And if you're going to drill through impermeable rock to reach a coal seam (unconventional gas in a more suitable location) that will deliver a small yield for 10-20 years, that's less desirable, but maybe you could think about it. But if you're going to drill through sandstone which is full of caves and underground rivers and has a unique, little-studied water purifying biology that feeds the entire region, then fracture the ground below to release gas, depressurise the whole system in ways that you can't model, and 20 years later fill the pipe with concrete and walk away hoping that everything will stay where it belongs for the next 500 years, it just doesn't stack up .

5. Unfavourable comparison to renewable technologies: Investment in clean energy makes sense economically and environmentally, creating sustainable, long term local jobs and local skills.

Renewable energy is already competitive, battery and other storage methods are progressing fast to the point of replacing fossil fuels as baseload power, and markets are generally moving away from fossil fuels.

6. Climate change impacts: In a best case scenario, Coal Seam Gas contribute to climate change with a similar intensity to coal. If one adds fugitive methane emissions the intensity is far higher because methane is 29 times more potent than CO2 as a greenhouse gas (recent studies suggest it will overtake CO2 as the lead contributor to climate change).

Please listen to the 98% of people who object to this proposal, ignore the self-interested remainder, and reject this short-sighted proposal,

With thanks for your thoughtful consideration and for bearing this responsibility for our future,

Best Regards,

Sent: Saturday, 8 August 2020 8:22 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Water is the most valuable resource we have this project puts the great artisional basin at severe risk.

- The Pilliga is uniquely important for Gomerioi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

There is no plan for these toxic salts.

Moreover in a landscape and ever changing drier climate taking water from the basin means less water for agriculture, wildlife and sustainability of land.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Creation of jobs is not a sound argument as the destruvtion of agriculture and land value will out weigh any short term job opportunity.

We have seen examples of CSG pipelines in the USA destroying the environment, health and communities. We do not know the long term effects but we have seen what a leak is capable of.

The transportation of this gas through pipes for 100s of kilometers is dangerous, short sighted and will have long term effects on communities - no long term maintenance has been suggested and Santos can not guarantee the safety of these pipes for 20- 50 plus years.

To poison the basin would be catastrophic.

Coal seam gas is not the gateway to green energy, it exploits and damages the earth just like coal mining.

Australia will not benefit from this, the project must be stopped. It is gas controlling gas on this scale is impossible America has tried and tested it. - ' minimising ' risk is not enough in comparison to the damage v the benefit.

It's my sincere hope that it is realised we, the communities that will be effected and Australia at large urge you to put the land the water and communities before big business.

I am a sixth generation farmer from Warren, if this goes forward I know I will be the last. Please stop this.

Yours sincerely,

Sophie Walker

Sent: Saturday, 8 August 2020 8:18 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As a grandparent I am deeply concerned about the impact on the future of our planet of mining and burning of fossil fuels which are increasing the green house gas emissions that are causing global warming.

The available science is unclear about the risks of gas fracking.

The Narrabri Gas Project poses an unacceptable risk to the Great Artesian Basin. The extraction process can contaminate fresh water sources that farmers rely on.

The drilling will puncture and potentially contaminate the waters of the Great Artesian Basin deep below the soil.

These waters are essential for agriculture in four states.

Not only will the groundwater be polluted but the drilling may cause the waters of the Great Artesian Basin to flow down and out of reach of water bores which will run dry. During recent drought some towns relied on bore water alone for months.

I also have grave concerns that the Pilliga Forest is more likely to burn in massive bushfires due to the presence of gas infrastructure thus hastening the extinction of 48 threatened species adding to the recent tragic loss due to bushfires of an estimated 3 million native animals.

These are just some of the reasons why I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

If there is ANY possibility of damage to our underground water supplies this should be stopped. Australia depends so much on clean underground water. It is the lifeblood of our nation's agriculture.

Yours sincerely,

Carolyn Salter

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I grew up with the privilege of having the Pilliga as my backyard and I urge you to reject Santos' proposed Narrabri gas project in the Pilliga forest. Growing up on farmland I know how vital the water and its water source is to my family and all our surrounding friends, it is the sole reason we have managed to survive these last harsh years of drought. As a community farmers and miners have lived and worked together for decades in Gunnedah and the surrounding area, often resulting in heated disagreements over land use and the need for jobs in the area. I have talked to many farmers, miners, business owners and indigenous custodians and I have yet to talk to one person who is not fearful of the devastation that the proposed gas project will have on our community. Surely when usually opposing members of a community, such as miners, farmers and environmentalists are united on an issue, government has to pay heed and act accordingly. This community is trying to save their livelihoods and protect the land which has given generations their everything; food, income, a home and a community.

Below are some key points which outline some extremely valid points as to why this gas field should not go ahead, please read and truly acknowledge them for what they are. Do not skim through and discard. Please take note of the many scientific papers that have been written by prominent scientists from both Australia and other countries describing the negative impacts gas fields are having throughout the world. These reports are written by impartial scientists who have no vested interest in this particular gas field, but are reporting on findings that will be replicated in my community. Your decision will have impacts on that will reverberate through generations of Australians. The damage gas fields have proven to cause throughout the world are irreparable - do not let that be your legacy to this community.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a retired teacher who grew up in the Bingara to Narrabri district, and taught in this area for 39 years. I have close contacts with folks on the land and have watched the increasing battle for competing water resources there and the tragic decline in water security which risks degrading and destroying not only healthy agricultural farmland but also the broader ecosystems in the area- including the Wild Pilliga scrubland which we locals love so much. Even the Planning Department's David Kitto has admitted that there are unknown impact variables relating to the geology and hydro geology of the gas field and although he posits the manageability of such impacts with strict and rigorous oversight, the history of gasfield production practice oversight is a sorry one in NSW. All too often it is too little, too late.

Here in Lismore we have said NO to coal seam gas because of the dangers inherent in pursuing this energy source. It is neither conducive to ecological sustainability nor viable in an age of devastating climate change and the drying of our wide brown land. I am deeply concerned for the future of the children I have taught, and my own grandchildren, who will face hardships in their future lives that my generation can only imagine, and that such projects can only exacerbate.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I believe that Covid has shown why our agricultural industry is vital to our country. The Pilliga forest is vital for wildlife and the environment of the area. Protection of groundwater is vital to the surrounding farmland and its continued viability.

Scientific advisors are against the project after four years of investigation, because they cannot guarantee that Santos' gas project will not be detrimental to the environment. Large mining and energy companies do not have a good track record of caring for the environment or Aboriginal sacred sites.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Mining Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Mining Project.

I object to the proposed Narrabri Gas Mining Project due to its major and unacknowledged environmental, heritage, social and economic impacts.

The collateral impact of changes implemented by the NSW government through the Crown Land Management Act, the removal of protections to bio diversity through allowing the resumption of extensive land clearing coupled with the current proposal to devolve the weakened federal Bio Diversity Act to the states, the non agreement with other states proposals for overground water management improvements in the Murray Darling Basin nor to properly regulate the malfunctioning water market in NSW and the publication of permissible exploration maps laying the foundation for massive and extensive gas mining expansion throughout mid western NSW, cannot be properly or effectively taken into account and the proposal should be rejected on these basis.

There is extensive evidence of the known unacceptable contamination impact on people's health and biodiversity in natural environment of gas mining on ground water. Contaminated groundwater directly impacts on the NSW foodbowl, the wildlife dependant on water and the eco system it sustains.. I try to buy local NSW food products, I don't want my food contaminated and I don't want people generally nor the wildlife endangered. The gas mining will also impact negatively on NSW food and other produce exports.

The recent bushfire threat to the gas fields in south western Queensland also highlighted the greater safety from explosion during natural emergencies of renewal energy infrastructure.

Nearly everyone in the local community have objected to the SANTOS proposal. The social impact of forcing the gas mining on the community is highly likely to be abandonment over time and the creation of a social wasteland to match the contaminated land. How can SANTOS ensure that the current community will continue despite the gas mining ? Have the IPC looked at the south west Queensland experience or a comparable US experience?

Santos has failed to adequately demonstrate how it will guarantee native title and other heritage protection rights for the local people, particularly in light of the watering down of protections likely under the Crown Land Management and Biodiversity Act proposed changes.

The economic gain of local gas available within the NSW local market does not guarantee any consumer benefits through product pricing less than the current international market price for gas, or inter state import price for gas through for example, delivery of Queensland gas by pipe/seaport to the coastal users. The likelihood of competitive pricing, or outright cheaper energy, through the developing renewable energy supplies has not been adequately taken into account by the applicant SANTOS.

The impact of the SANTOS proposal and the likely others that follow on carbon pollution induced climate change has not been adequately taken into account. The current legal action underway, about the impact of this type of carbon pollution on the future of the next generation of Australians, has not been and should be taken into account.

For all the above reasons, it is simply unbelievable that in the C21st and in light of the continuation of drought, recent absolutely unprecedented bush fires and during a pandemic, the current NSW State government is putting

responsibility for facilitating these highly damaging multinational corporate interests and profit above all else and onto the NSW IPC; rather than passing legislation to retain the existing moratorium on gas mining in NSW, in the public interest.

I look forward to hearing from you in regards to this submission.

Subject: Submission: Strong objection to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

My greatest concern is there is no guarantee that the Great Artesian Basin and local aquifers will not be damaged if the project goes ahead. My farming business relies heavily on water provided from the GAB and my livestock rely entirely on water from the GAB. My family and casual employees also use it for domestic use - washing dishes and clothes, showering, toilet flushing. Thank goodness for the GAB water supply during the drought, and in good times.

No-one knows exactly if or how all the GAB aquifers are connected, so it is best that one of Australia's greatest water resources is left well alone.

I am skeptical about the amount of jobs the project will sustain, once the infrastructure is in place and the damage has been done.

I am also skeptical that it will bring down gas or electricity prices.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I have lived in the North West and New England regions for 62 years, having grown up on the Breeza Plain before moving to the Narrabri and Wee Waa area. Therefore I have a strong affiliation with the land, water, flora and fauna in those areas.

Santos's proposed gas project to dig 850 gas wells in the Pilliga forest could create critical water problems by poisoning acqifers which supply water to farmlands and town supplies.

Severe health problems have developed in local communities in other regions in Australia and overseas as a consequence of CSG drilling.

With 97% of local Narrabri people objecting to the Santos project it is time to stop further plans to dig up this significant part of NSW.

Kevin Gallagher has stated gas prices will not lower in price due to this project so no financial benefit will be achieved for gas users.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I studied biology including ecology at university in the 1970s. I have friends and family in northwest NSW and as a citizen deeply concerned about our environment, farmers' and graziers' job security and the jobs of those in industries dependent on them, water security, climate change and species extinction I am objecting to the Narrabri Gas Project. As a parent and grandparent I want my children and grandchildren to live in a world with a better environment.

The Pilliga Forest is a precious woodland habitat for many animal and plant species some of whom are threatened, including koalas. Australia has destroyed enough important habitat and caused extinction of a shameful number of species without the risk of adding to the toll. Extinction of species cannot be reversed.

We also cannot afford to damage our vital water supplies which are essential to our food security and life. Any damage to the hugely important Artesian Basin and aquifers cannot be undone.

In addition the danger of bushfires would be increased with gas extraction. We cannot afford greater risk of fires when bushfire threat is already becoming greater with existing climate change.

And all this damage for gas, a fossil fuel energy source damaging to the environment, when it is possible to support and develop alternative renewable energy supplies with the many jobs associated with renewable energy. These renewable energy industries would in turn reduce dependence on fossil fuels and the terrible damage to the environment and climate which fossil fuel extraction and burning cause.

It is important that the government and organisations take action to protect the environment and to reduce climate change. They must not increase climate change and damage the environment.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Anne Smith

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a person living on a small holding of land in a little community where we get along so well with all our neighbours. If someone came and did what Santos is doing to the community at and around the Pilliga Forest we would all be devastated just like their community is. Who are these people who think They can walk in, take over and completely disrupt these people's lives as if they don't matter? How dare they!

I have just finished reading A Million Wild Acres by Eric Rolls who has spent his whole life near or around The Pilliga Forest and it breaks my heart, as well as the hearts of the people who live there, to see this destruction, not to mention the destruction of the planet by obtaining more gas and for what? Just more money for people who already have more than they need. Why should we allow these greedy people to destroy this beautiful part of the world?

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

From: Louise McCabe <campaigns@good.do>
Sent: Saturday, 8 August 2020 5:11 PM
To: IPCN Enquiries Mailbox
Subject: Submission: The Narrabri gas project should not go ahead

Dear Commissioners,

After the recent and devastating bushfire season, I am shocked to learn that Santos' plan to go ahead with the proposed Narrabri gasfield in the Pilliga forest. I urge you to reject it.

Adding a gas field to the beautiful Pilliga forest will devastate one of our beautiful forests, and the species that rely on it to survive. This is unconscionable considering how much of our precious forests were destroyed in the 2019/20 fires, and how many threatened species Australia has.

The dangers of coal seam gas to the environment, water source and health of the local people is well known and documented.

The Pilliga is also culturally significant for The Gomeroi people, for biodiversity and water resources.

Installing 850 coal seam gas wells and roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

The gas project bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year. The risk that this puts the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers at is extreme and is both reckless and foolish for our environment — now and in the future.

Just as important is the impact the project will have in terms of dangerous climate change. The gas field will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions. This is a significant amount when considering Australia needs to reduce emissions by more than 7 million tonnes a year.

The project offers no financial benefits to Australians, as it won't bring down the cost of our gas or electricity prices.

For all these reasons I urge you to reject the project unreservedly.

Yours sincerely,

Louise McCabe

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- This gasfield will create an unacceptable fire risk. I understand that flaring from this gasfield would occur all year round, including during total fire bans. How absolutely outrageous to propose to build this gasfield in the Pilliga forest, especially given the massive fires we have all recently suffered through in NSW, and the increased likelihood of further such events, as a result of worsening climate change.
- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Jessica Lowe

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Coal seam gas production causes pollutants to enter aquifers which can travel for hundreds of kilometres over thousands of years.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Nicholas Murphy

Sent: Saturday, 8 August 2020 4:10 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am making a submission to oppose the Narrabri Gas Project as I feel the risks far outweigh any advantages. After the catastrophic bush fires in 2019 and 2020 it's time to start taking climate change seriously. We can't possibly be taking it seriously if we are backing a development like the Narrabri Gas Project. As I understand it the project will allow Santos over twenty years to remove 37.5 billion litres of water from deep below the Pilliga and treat it in the Leewood water treatment facility. This treatment will produce up to 840,000 tonnes of solid salt, laced with heavy metals, for which Santos still has no disposal plan. Removing this water will cause depressurisation and loss of water in the Pilliga Sandstone, the southern recharge of the Great Artesian Basin, which outcrops in the Pilliga. Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas. Santos anticipates leakage from the precious alluvium that lies above the coal seams despite claiming there is no linkage between the water sources. Landholders that rely on the GAB, the Gunnedah Oxley Basin and other groundwater in the area are strongly opposed to the project. The livelihoods of the people already trying to make a living in the area must be of paramount concern, these indigenous Australians and farmers must be given priority.

Coal seam gas brings upheaval and division to rural communities. A CSIRO survey in 2014 found that only 6% of local people living in Queensland gas field areas thought the industry had improved their lives while 42% said that they were "not coping" or "only just coping". Santos' own assessment found that there would be "almost certain" impacts on housing affordability for Narrabri residents, which will disproportionately affect low-income households and Indigenous people, who are far more likely to be renters. Claims of job creation are crucial to the project's justification, with an anticipated average 190 jobs created locally and 322 in the rest of the state, but this comes at other industries' expense. Santos' own assessment admits there would be lost employment in agriculture and manufacturing as a result of the project, despite the typical unsubstantiated claims of flow on jobs in NSW. Santos claims the gas field is needed to "increase supplies

of gas, but there's a glut of exported gas from Queensland and ships of Australian gas are sitting idle unwanted. This makes the extraction of gas even more ludicrous as we are destroying our environment for gas of which we have a glut. The majority of social impacts are proposed to be mitigated through the use of the Gas Community Benefit Fund, the use of the Community Consultative Committee and a range of Landholder Compensation agreements, ignoring many of the negative impacts of the project, not least of which is the insane waste of critical water resources and the resulting pollution of the ground and ground water. Are people not aware of the cost of water? China seems to have a pretty good idea and continues to be able to buy up ours at knock down prices.

The Pilliga is a hugely significant landscape for Gomeroi people. Santos' "Aboriginal cultural heritage assessment" identified 90 known Aboriginal cultural heritage sites in the project area, including rock shelters, burials and historic camps and hearths. Santos promises its drill pads and infrastructure will avoid these sites, but they're based only on previous work. No detailed new surveys for Aboriginal cultural heritage have taken place yet. Santos proposed to undertake detailed surveys after it gets approval, and avoid newly found sites of high significance but by that time it will be too late to stop the gas field and almost certainly, any further impetus to "discover" more heritage sites. Like

with the recent Rio actions, the chances are high that archeological sites will be destroyed because of the lack of desire by current governments to preserve them for the (depressingly dystopian) future.

The Pilliga is the largest temperate woodland in eastern Australia and CSG will industrialise 95,000 hectares of it, clearing nearly 1,000 hectares in small patches for well-pads, infrastructure and gas lines, including removal of several endangered ecological communities. How can this actually be considered? Only limited surveys were actually undertaken as part of the assessment of the gas field, but these found 10 threatened plants and 35 threatened fauna in the gas field area, including pygmy possums, koalas and the Pilliga mouse. The Pilliga once hosted one of the most important koala populations in New South Wales, but the species is now on an extinction trajectory in the area. With so much habitat and lives lost to recent catastrophic, unprecedented firestorms, it is crucial to the survival of the koala that its bushland habitats be spared industrialisation.

Total greenhouse gas emissions produced by the project could be 127.8 million tonnes of carbon dioxide equivalent, or 5 million tonnes a year. In a time when Australia is struggling to meet its commitments under the Paris Climate Agreement, this one gas field would increase Australia's greenhouse gas emissions by nearly 1% per year. We are heading in the wrong direction when we should be reducing our dangerous gas emissions, not increasing them. Mobilising methane in coal seams could lock in ongoing fugitive emissions of this potent greenhouse gas for decades to come. Globally, the UN Environment Program's Production Gap Report in 2019 found that, "With average lifetimes of 20 years or longer for pipelines, terminals, wells, and platforms, the time to begin planning for a wind-down of gas production is, as with other fossil fuels, already upon us." Their report found that to achieve the Paris Climate Agreement goal of keeping average global warming well below 2 degrees, global gas production needs to peak by 2030 and decline after that. To meet the less disastrous 1.5 degrees warming limit, gas production needs to peak this year.

What we need to consider is the future of our over stressed country. As global warming continues, we are on the knife's edge. The recent devastating bushfires must surely be our wakeup call as we have ignored all previous warnings. The time to take a stand on climate change and greenhouse emissions is now. We need to transition to renewable energy and do it now. The "lovely and warm" mentality is about as sane as the COVID deniers.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

From: Libby Jones <campaigns@good.do>
Sent: Saturday, 8 August 2020 3:29 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project. It must NOT go ahead.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I, Libby Jones, a resident of NSW, am extremely concerned by the many gas projects in Australia, but particularly the Pilliga Forest project. The threat to below and above ground water is too severe to allow the project to go ahead. We must preserve and manage our precarious water supplies. Gas projects do not allow for this; there are too many unknowns with fracking. already our aquifers are lowering, and with climate change occurring their replenishment is less reliable.

The chance of breaking the natural separations of salt and fresh aquifers is too high. The damage from the mining process is too likely. We cannot afford that gamble.

The rest of the environment, creatures, farms and people need the water well into the future. We cannot allow short term gas mining to destroy those water supplies for the long term.

The above ground water helps to feed the Murray Darling and as we all know, it is already far too short of water most of the time. Any extra reduction will cause widespread damage across a vast portion of Australia. One short term gas mining project must not be allowed to add to such damage.

I really worry about the rampant 'bulldozing' of this country by large and small corporations. They only look to the short term profit and not the long term viability of this country. Rio Tinto is not the only corporation to have a Juukan Caves incident. Far too many have happened or are in the wings waiting to happen. The miners walk away and the taxpayer has to clean up the mess, if they can. Do not let the Pilliga become another version of a Juukan Caves.

'In Australia, 75% of mines have been closed prematurely or in an unplanned way, leaving them either abandoned or not properly rehabilitated. About 50,000 abandoned mines lie scattered around the country. Each has its own set of dangers, ranging from pollution of waterways to potential collapses' July 19th 2016 The Guardian

I want my children and their grandchildren to have a life similar to the one I enjoyed. That means having an environment that is livable. We have to act right now to ensure that there will be a livable environment as the climate is already suffering many changes from the increased CO2 and Methane in the atmosphere. Allowing the mining and burning of gas is not going to assist with the preservation of our environment.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Libby Jones

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I have recently become a citizen of Australia and this is the reason why I care so much about this Land. I am from Brazil and have seen Nature been destroyed over there, with very little left now, an immense disrespect for biodiversity, original people and also to people's opinion.

One of the things I love about Australia is the fact that the Parliament really hears the common citizen. I have witnessed an amazing act of community getting together to stop Adani in Norther Rivers which made me believe that in Australia people are heard.

It is obvious that the general community in Pilliga doesn't want the gas field there. The numbers are showing it and people are desperate.

This is why I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomerioi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, who have not been consulted and do not give their support for the project. Their voices should be brought to the fore. This is a moment when they should be heard and listened to. Their responsibility is to preserve their country not destroy it for short term gain.

- For the biodiversity who cannot be heard, they have very little time and wriggle room for such a project. This project will lead to extinctions as the forest ecosystems will be impacted irreversibly! The science is certain about that!

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- This project is going to pinprick the aquifers including the GAB, an only water resource for many people who have built their businesses on that resource. Risking contamination and drawdown of these important water sources is nothing short of insanity! We cannot take ANY risk with underground water, a resource which is already under enormous stress. This will compound problems further and we risk too much in allowing such industrialised developments especially ones that do not meet Ecological Sustainable Development principles!! And this along with the 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. This is not on and makes this project only a destructive one with irreversible consequences when climate scientists are warning of catastrophic climate change events like what occurred in this summer at our doorsteps.

- And it won't even bring down gas or electricity prices for Aussies! So what are the reasons for doing it?? I do not agree that the benefits outweigh the destructive consequences that this project will certainly bring.

Yours sincerely,
Michelle Webb

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I visited the Pilliga forest for ten days in 1983 as a part of a land management degree. I visited there again for recreation in 1986. On both visits I marveled at the diversity of land systems, from the wind whispering swathes of Casuarinas to the statuesque stands of native pine stands and much more. These and other land systems support a diverse range of mammals, birds, reptiles and invertebrates. The Pilliga has always remained in my mind as a place of exceptional biodiversity and beauty.

The CSG proposal by Santos raises some of the most important questions that we must address today in Australia. I will address three of these, the biodiversity crisis, the status of CSG as a transition to an energy sustainable future, and the scarcity of water in the Australian landscape.

1. Our biodiversity crisis

Biologists are now referring to the current age as the sixth global extinction. Against this grim context, Australia rates as the world's worst. We have the highest rate of mammal species extinction and the second highest rate of bird species extinctions. These estimates were current before the 2019-2020 bush fires, which have hastened our pathways to extinction. On recent estimations, these bush fires killed 3 billion mammals, birds and reptiles. Australia is faced with an accelerating pathway of environmental destruction and we must make all efforts to arrest this process. We cannot afford to destroy a biodiversity resource such as the Pilliga forest. The Santos proposal, with its extensive and destructive land use outcomes will do precisely that. Apart from the actual destruction of large areas of forest, it will but through the landscape with myriad zones of edge effects, which are areas of species depletion. The Pilliga forest is primarily important for its biodiversity values. We cannot afford to destroy these values in the quest for an energy source that is highly dubious in its value for addressing the issue of global warming.

2. Energy transition

Gas extraction is touted as a transitional stage leading to a renewable, more sustainable energy future, to address global warming. This claim is clearly in error. First, the CSG industry is plagued with fugitive emissions. These produce unrecorded and unregulated CO2 emissions. So the claim that this gas source produces less CO2 than the coal industry cannot be quantified. Second, the infrastructure involved in utilising the gas resource is substantial, implying that it is intended for the long term and to supply overseas markets for the duration. No one, least of all Santos, believes that CSG will be a short-term pathway towards reduced reliance on carbon emitting energy production.

3. Water scarcity

The Great Artesian Basin is a highly complex system. It can be likened to a three dimensional chess game, in which the connections between different flows of water are largely unknown and perhaps unknowable.

We just do not have the knowledge for anyone, including Santos to make any claims about the effect of CSG gas extraction processes on the all-important resource of water. Any risk to these water resources must be seen in the context that Australia is the driest inhabited continent on earth. Indeed, water is the limiting factor for most Australian land systems.

We lack the knowledge to make sound extrapolations about the behaviour of the parts of this complex system. We cannot afford to jeopardise such a large component of Australia's water resources.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

From: moothedath@gmail.com
Sent: Saturday, 8 August 2020 2:59 PM
To: IPCN Enquiries Mailbox
Subject: Submission of Objection by Balu Moothedath : Santos Narrabri Gas Project

Dear Sir,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

Times when the global warming is still rising it is important that we keep global warming below 2°C and must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater. Being a bird watcher, I understand the impact to birds.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

Balu Moothedath,
2066

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. My sister is studying city planning and has informed me of your project. Farming communities in Australia have been suffering from drought and yet are battling off oil and coal mining projects across Australia (another example being the Bylong Mining Project). The public are losing hope in the government's priorities, and our agricultural economy lays vulnerable at the hands of your decision regarding this project (and those similar such as the Bylong project).

-The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I'm emailing you today to in the hope that you will reject Santos' proposed Narrabri gasfield in the Pilliga forest. This area of NSW is beautiful and already badly impacted by mining and gas extraction, it doesn't need to be destroyed any further. Creating 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Water is our most precious commodity and must be protected above all else. The gas project will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. If these water areas are impacted the damage will be irreparable, how can you risk it?

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. And it won't even bring down gas or electricity prices for Aussies!

The Pilliga is also uniquely important for Gomeri people, for biodiversity and water resources.

Please do the right thing and reject the gas project, be a good Australian and act for us and our country, not against us.

Yours sincerely,

Neal Culkin

Subject: Objection to Proposed Santos Narrabri Coal Seam Gas Development Project

Kalinda

90 Middlebrook Drive

Scone. 2337

4/8/2020

OBJECTION TO PROPOSED SANTOS NARRABRI COAL SEAM GAS DEVELOPMENT PROJECT.

Dear Fellow Australians in the position of Decision Makers,

Firstly, we must say we are in full support of the Narrabri Community's objection to the Narrabri Gas Project. We totally endorse their points as stated below,

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.
- Industrialising the Pilliga with 850 coal seam gas wells and countless roads, power lines and pipelines would irreparably damage its cultural, ecological and hydrological values.
- The Gas Project would bring up 1.5GL of water and more than 13000 tonnes of toxic salts each year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Having acknowledged and endorsed the stance of the Narrabri and Pilliga Communities in preserving their precious farmland, water aquifers, rural health, agricultural production and related businesses and jobs, we wish to add our points to reiterate the importance of allowing rural Australia to continue unhindered and not continually threatened by the Coal Seam Gas Industry.

We are both saddened, and in total disbelief, that anyone could be seriously considering the Narrabri Gas Project proceed. To give the go ahead for Santos to continue down this destructive and extractive path is utterly shameful and inappropriate.

As you read this submission, I must remind you of the incredibly privileged positions you hold, as decision makers for this country and the heavy responsibility you have, to preserve our land and water for future generations. As such, your decisions, will have far reaching, long term effects which will be felt far into the future and nationwide, long after you and I are gone. Make sure you leave a legacy to be proud of and cement a sustainable future for future

generations. The decisions you make must be in the best interest of Australia and the Australian people and not in favour of corporate companies, either national or multinationals such as Santos.

We submit the following reasons for our stance in rejecting the Narrabri Gas Project.

- On a world scale, Australia is seen as the clean, green nation from which Agricultural products are sought after and revered, and as such, command a premium price. We must invest our future in Agriculture and preserve this clean, green status, step up to be the "premium food bowl for the world". No longer must we go down the track of becoming the quarry of the World. We must protect our precious Agricultural land, nurture it and we will continue to thrive.
- To retain a sustainable and reliable Agricultural Industry, our groundwater must be given total protection from all extractive industries. Santos have already failed at this, by contaminating ground water aquifers in the Pilliga. We have just come through a record smashing drought in which farming took an incredibly tough hit. Without the Great Artesian Basin, this highly productive area could not have survived and continued to produce valuable Agricultural commodities. The Health of the Great Artesian Basin must be preserved and protected as it is vital for the survival of this dry continent and all who live here.
- Now, more than ever you must be aware of the absolute vital need to maintain Australia's ability to feed itself. Our water and food production cannot be understated as critical infrastructure far ahead of any Gas Projects. Australia's food and water security are paramount to our sovereignty and self-sufficiency in the case of any event, and must never be compromised in any way for any reason whatsoever.
- The Gas Industry has already demonstrated its inability to operate without negative impacts. It has created numerous health issues for rural communities and towns by contaminating groundwater and air quality. It has rendered many areas of Agricultural production irreparably damaged and unusable. The Narrabri Community rely on the groundwater for everyday living ; washing, showering and gardens. They have no other reliable source of water. There has already been at least a dozen spills and incidents from Santos' operations in the Pilliga, including them being fined for poisoning a local aquifer. Is this something you can justify a continuation of? It is on you to follow the wishes of the people for the betterment of society and our rural communities.
- The regional and farming communities of Australia are truly resilient and productive despite their lack of numbers, compared with Metropolitan Regions. They have prevailed over the recent record smashing drought, devastating bushfires, floods, and Covid & State lockdowns. These areas do not need another threat to their livelihoods and quality of life such as a destructive, extractive industry with an appalling record of danger and environmental damage recorded worldwide. Give these regional areas some respect and let them get on with what they do best... Grow food. I am aware of one particular family farming operation located just 6 kms south of Santos' proposed coal seam gas project. They are a powerhouse of production, growing 70 million potatoes, 1 million kilograms of peanuts and enough wheat to make 3.5 million loaves of bread, every year. They are groundwater operators, earning repeatable export dollars for Australia and providing a significant number of long-term, stable, healthy workplace jobs for locals. And that is just one example. There are many!! Risk of damage to the aquifers by this short term gas industry must not be taken. These farming enterprises, and so many like them, must be protected at all costs. The clean, green Australian food image is worth preserving, as are the dedicated family farmers and community members who love and work this country. You MUST agree.
- The temptation to "Go for the Gas" as a quick revenue stream to solve the economic mess we are now in, must be totally avoided. A short-term fix to attempt to "balance an out of control State and National Budget" by throwing our Rural Sector totally out of balance too, is a ridiculous plan. Agriculture is the ultimate renewable industry. It continues to produce year after year, export commodities and export dollars, without the major govt subsidies invested in the short term uneconomic extractive industries. Agriculture must be put FIRST, as does the

water supplies of regional Australia. Gas, extractive fossil fuel industries, including fracking, do not co-exist with clean water.

Again, we reiterate, our objection to this project.

The risks are far too great to allow this to proceed.

We urge you to make the right decision. Reject this project and open your hearts and minds to Agriculture and the amazing downplayed new energy technologies waiting to be utilised. We know they are there. You know they exist and so do our Governments. Let Australia lead the way.

Trusting you will open your minds, think long-term and please, think smart and be wise.

Thanking you for taking the time to read our submission.

We look forward to your Pro Australian Agriculture decision!

Yours faithfully,

Ross and Shirley Watson

Sent: Saturday, 8 August 2020 2:03 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am distressed to read of the doubts expressed by Dr John Williams regarding the avoidance of an environmental disaster if the gas project proceeds. It is pertinent to note that even Santos has admitted uncertainties in its own scientific assessment of the project. In the light of such doubt and uncertainty, the project should not be permitted to proceed.

I am particularly swayed when a scientist, of such note, speaks on this topic and cannot understand why mere commercial interests might be considered as superior to the public and environmental cost of such devastating and irreversible damage.

Artificial entities, such as Santos, exist and benefit purely as a result of the social license granted by the members of our society, and as such their actions must always accord within the norms of our society. The wanton destruction of the Pilliga does not fall within the bounds of what is tolerated by our society and our regulators now have a clear duty to ensure that this CSG project does not proceed.

As a former resident of the immediate area, and a grandparent, I would request that a long term approach be taken, and the Pilliga left as pristine as it still can be. There are alternate sources of energy, and these can be utilised without the damage that the extraction of dirty gas would cause.

Commercial returns for shareholders cannot receive primacy over the rights of us all, and our future communities.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

This is not the answer. The answer is a combination of coal and nuclear. The rise in CO2 has only made the Earth greener. We are at a dangerous level of low CO2, around 400ppm. Life thrived on this planet the most in history when CO2 levels are around 5,000/6,000ppm.

Nuclear is the best and safest. In all of history Nuclear has only had 2 major incidents. Chernobyl and Fukushima and the latter was no fault of the facility but of the environment and the Russians are just morons.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Simon Sherwell

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

Please do not include my name and submission on your website.

Submission on the Narrabri Gas Project.

As an 84-year-old Australian, resident here for 65 years, I object to the proposed Narrabri Gas Project due to its significant potential environmental, heritage and economic impacts.

The Pilliga forest with its relatively unpolluted water is vital to the continuing health of its surrounding farmland and in a broader sense the whole Australian climate. Risks to our climate are unacceptable due to our vulnerability to planet warming and resulting toxicity.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment.

Yours sincerely,

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a retired Zoologist and former NPWS / OEH officer who has worked on fauna projects in the Pilliga Forest. This area is far too significant to biodiversity to threaten the continued survival of unique flora and fauna and threaten invaluable underground water supplies with land subsidence, water pollution and methane emissions, impacting on lands well beyond the boundaries of the Pilliga forests themselves. This combined with the additional impacts on our climate from escaped methane and burning fossil fuels when renewable energy sources are becoming more available is completely unacceptable.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My mother was born in Coonabarabran Hospital and lived her early years in Baradine. The Pilliga area is a special area that needs greater protection. Unfortunately, gas has proven to be an inefficient and polluting form of energy. The gas released when mining and through leaks is clearly unsustainable. The Pilliga scrub is hauntingly beautiful and its unique qualities need protection.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

- And it won't even bring down gas or electricity prices for Aussies!

The destruction by gas extraction & damage to our underground artesian water basin is hugely concerning.

Water is something severely lacking in Australia we have already seen the results river's that have stopped flowing, which effects food production millions of fresh water fish dead or effected by climate change denial & the LNP's disregard to the environment & our unique wildlife.

In Australia we have very little good quality farming land to continue farming for food production instead we have a government that shows little regard to the future of Australia or our future generations.

Greed is not an excuse to Destroy.

- And it won't even bring down gas or electricity prices for Aussies!

I know I live on the other side of Australia to the Pilliga but I object to ANY new gas projects being allowed. These projects threaten our water integrity, destroy natural habitat for our seemingly forgotten fauna, ruin peoples lives through mental, health and financial stress and continue to contribute directly to climate change from fugitive gases. Australia produces sufficient gas for domestic demand and there is a global glut of gas due to COVID-19. So why are we putting all of this and more at risk for a product that is not required now nor in the immediate future?

Please do not approve the Narrabri gasfield for the benefit of my future grandchildren, Australia and the whole world.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

These projects are unnecessary risks with risk free renewables an undeniably better option.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Jack O'Connell

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

The consequences of this action will outlive all of us. The future impact is incalculable; nothing good can come of it beyond short term profits for a privileged few.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Rosemary Brooks

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. Once the land has had the coal seam gas wells etc put in, there will be much lost never to return, no amount of restoration will bring back how it was before.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. There is no way to undo that contamination to the aquifers. Our ecosystems are reliant on them.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Sent: Saturday, 8 August 2020 12:30 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: I am a parent and grandparent and have deep concerns about the future of the planet. I know that many young people are concerned and worried that nobody in government seems to take seriously what scientists are telling us about how we are destroying our environment.

EDIT HERE: Prior to retirement I was responsible for business continuity planning in a major Australian enterprise. There were two extraordinary risks which kept me up at night, one was the risk of another pandemic and the other was climate change. We have now seen how vulnerable we are during the Covid 19 pandemic and how strongly governments can react to real and present dangers. The dangers of climate change are just as real but fortunately not yet present and I would like to keep it that way. We know that greenhouse gas emissions are the major contributor to global warming and we know that the fossil fuels are the major source of green house gases. For these reasons I firmly believe that it is both irresponsible and reprehensible for any Australian government to approve any new fossil fuel development.

I am especially concerned with Coal Seam Gas exploration as it is impossible to know the impact that it will have on underground water sources. My son is a Civil Engineer and his honors thesis was on investigating and predicting how pollutants could be spread underground. His conclusion was that it was impossible to predict with any accuracy where pollutants in the water supply would end up once they went underground.

I do not wish to gamble the future on short term financial gain for mining companies.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Why won't you consider the impact on our Aussie farmers?

Why won't you consider the impact on our ground water?

I'd love to see you all sit down to a meal from foods produced near these gas wells. If you won't, why should we?

I'd love to see you spend just 2 weeks living near a gas well. It won't be long enough for you to get bloody noses (maybe) but I'm sure the noise and activity surrounding it would bother you.

The demand for CSG is declining. It DOES NOT warrant another well.

For the love of the people, STOP!

Subject: Submission: I object to the Narrabri gas project

Dear Commissioner

I strongly object to the development of the Narrabri gas project. This project has been rejected by the Gomeri people, local farmers and surrounding residents.

The effect on the environment, the water tables, the Great Artesian Basin will be documented and to ignore all opposition to this project reeks of environmental vandalism.

It's obvious that this project has no social licence. Letting repairable damage to the water tables and farmers' livelihoods, land values etc at this project should not be permitted.

I have researched all the pros and cons of this project and firmly believe it to be against the interest of all Australians' interests and the interests of the environment.

Yours sincerely

Subject: I STRONGLY OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can please include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I have links to the Pilliga dating back to the late 19th century. My ancestors would have seen clean water with no threat of pollution. Now who knows; will the land and water become so polluted that it becomes unusable? Also the important undisturbed areas, areas of high diversity. Will they remain as they are now?

Additionally we cannot afford the inevitable escaping gases increasing the greenhouse pollution we already produce here in Australia.

This is now and always will be the wrong project for the Pilliga. Anywhere in Australia when it is really thought.

Due to the above reasons I strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Australia doesn't need fossil fuel energy derivatives anymore. There are so many alternatives! Government should invest in this sector to take us out of the economic effects of Covid 19. Our future needs to be sustainable! PLEASE SHOW CONCERN FOR FUTURE GENERATIONS!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I am against the Narrabri gas project

Dear Commissioners,

This is to ask you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

-my main concern is for the people and water resources . The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising this area with coal seam gas wells and more roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

-the damage it will cause is unthinkable. It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

-also This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Please save this area and help work to a better and sustainable future.

Yours sincerely,
Berny Lohmann
Kensington Park, South Australia, 5068, Australia

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

There are several reason for my concern:

- Gas is a fossil fuel that is no better than coal in terms of co2 emissions when fugitive emissions are factored in.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

- I plead with you not to ignore all the above, as well as the fact that the climate science that is screaming out to us that ALL fossil fuel must remain in the ground.

This isn't merely a commercial decision, it's about the future of all living things.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: Who will benefit from this project? Certainly not those who rely on agricultural and pastoral industries in the area. The experts say gas is not clean energy, it is a finite product and a short term solution to energy supply. 20 years is not even a lifetime.

EDIT HERE: We want clean, renewable energy and according to scientists gas is not clean and certainly not renewable. The Narrabri Gas Project will profit Santos and maybe shareholders through dividends, at the expense of local communities and certainly the environment.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I live in a nearby area.

It is sheer foolishness to risk the water of this continent. CSG production on this scale will do this .

The land intended for the project is good soil land suitable for farming and the Pilliga forest is an important conservation area.

Having endured the drought and dust storms of last year which caused me severe respiratory problems and eventually hospitalisation with pneumonia, I dread the potential for worsening climate change that inevitably will follow with this project.

The health impacts of this project on people living in the surrounding areas and around coalmines are criminally underplayed while the benefits in terms of employment are blatantly overstated.

EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Focus your energy on sustainable, ethical and environmentally safe forms of energy.

Yours sincerely,

Sarah Silverman

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

I object to the proposed Narrabri Gas Project due to its wide range of serious impacts.

As a former national park officer and now environmental consultant, I have worked in the Pilliga on several occasions. I lived in Narrabri for a time and have visited the area several times in recent years. I know the Pilliga well.

I find it appalling that with our environment in such dire straits that anyone could contemplate carving up the largest remaining forest area west of the Great Divide in NSW, as is required for this project with its 850 wells and myriad connecting roads.

To do this in order to extract vast amounts of greenhouse-generating fossil fuel when our future has to be carbon-negative, and very soon, is beyond understanding.

Then there is the risk to groundwater and agriculture, which moves this project into the indefensible and unconscionable category.

Hence I strongly object to the Narrabri Gas Project. It should not go ahead under any circumstances. Thank you for the opportunity to comment.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

There are so many crucial reasons why this project should not proceed, namely:

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Assessment Report states the project would “put downward pressure on gas prices.” However the Institute for Energy Economic and Financial Analysis (IEEFA) states production costs at the Narrabri Gas Project are some of the highest in the country, with estimates to supply major domestic markets as high as \$9-10/GJ. Currently in Australia customers seeking long term contracts are paying between \$9-12/GJ to secure gas, leaving little room for profit generation. The project will clearly be at a globally uncompetitive price for gas.

The Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The future of the Pilliga Mouse is threatened by this project due to the spread of invasive predator species, and consequent increased rates of predation; the increased fragmentation from access tracks and dispersed clearance potentially creating unfavourable microclimates, open space, and traffic disturbances. The loss of habitat is significant.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

While the Assessment Report states the project to be "critical for energy reliability and security" we do not have a gas shortage especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal. The modification to the original Development Consent will satisfy the market need for more gas during the cooler winter months.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission regarding the Narrabri Gas Project

Dear Commissioners,

I have been a member of the Great Artesian Basin Coordinating Committee for more than 10 years and I write urging you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The project is located in the recharge area for the Great Artesian Basin. Our understanding of how this part of the GAB works is far from perfect and our track record of water management in Australia and especially the over-lying Murray Darling Basin, are both poor. There could be irreversible risks to a hydrogeological wonder, the MDB, the Gunnadeah-Oxley groundwater basin and local aquifers which are relied on by thousands of water users.

As a resident of the Darling Downs I know only too well that there are intractable waste issues attached to industrial gasfields. Salt does not biodegrade and will be a permanent risk to ground and surface water quality.

We are living in an extinction crisis.

We don't need more greenhouse emissions.

No more cultural heritage should be willfully destroyed.

We need an evidence-based precautionary approach to our energy needs that maximises social, economic, environmental and cultural benefits to local communities.

Yours sincerely,

Sarah Moles

Subject: Submission on the Narrabri gas project

Dear Commissioners,

The Lock the Gate people have provided this mechanism for me to send my own objection to the proposed Pilliga gas project.

I am familiar with the area, having worked as an astronomer at Siding Spring Observatory.

Some points are clear:

1. Santos wants to proceed because it's their core business and they stand to profit the company and the shareholders.
2. There are many risks associated with coal seam gas mining, not the least of which is poisoning the ground water essential in times of drought for the rural community.
3. The Pilliga will be significantly environmentally degraded by Santos' gas mining.
4. The people who live in the immediate area strongly opposed to the proposal.
5. The corporate executives of Santos do not live in the area.
6. As a physicist I know and understand that the burning of gas will contribute even further to the gathering doom of climate change. This is the greatest threat to the future of civilisation.
7. Gas is a fossil fuel. Saying gas isn't as bad as coal is like saying Pol Pot killed less people than Stalin. True but hardly a justification.

8. If we endlessly choose short term gain over long term danger, we are doomed.

9. Every decision that aids and abets such processes contributes to this terrifying threat. By your decision you can choose to contribute to the threat or to speak up for sanity.

10. The immediate economic case is and must never be the only consideration in such decisions. Economics is not well equipped to assess or deal with long term environmental costs.

Your decision matters, not just to the local rural community or Australia, but to humanity as a whole.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

When studying for my science degree, the Pilliga was a major destination for field studies on biodiversity and endemic species (found nowhere else). Since then, land clearing for farming has made obvious impacts on this, however recently farmers have become more aware of sustainable practices that benefit them as well as the unique environment. Now the majority of the local community object to the project on a variety of grounds.

Although Santos assures us that all environmental protections are in place, there have been accidents in Australia with CSG production, and many overseas. There will always be accidents. In a project of such a scale the probability of accidents is greater. Once damaged, this unique ecosystem will not recover to what it is today. The risk is simply too great.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Hugh Cowley, I've lived to the east of this area for the last thirty one years, and appreciate the value of areas of land remaining without human interference.

Having volunteered for the RFS for the last 27 years, I can see first hand the rising annual temperatures affecting our lives in ways such as loss of species of trees and wildlife around the greater region, more frequent fires in previously unburnt areas due to drier conditions.

Humans do affect the environment more as populations increase, and short term profit driven projects such as Narrabri Gas serve only to increase the pressure on all the eco systems which support us.

It's time to change course away from destructive short term profit driven projects serving only to make the rich more rich!!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Hugh Cowley

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

All of our country was just on fire. Putting more natural habitat at risk is not a sustainable

Public lands are meant to be public. I like to believe that in Australia, we get something for our money when we pay taxes. Incredible natural landscapes and some of the most unique animals on the world are part of that. Plus, no one I'm the community wants this project to go forward. Respectfully, who are you to decide otherwise?

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As a concerned person regarding the environment degradation and global warming, I do not think this project is in line with long term sustainable objectives that I think should be set for future generations of Australians.

My key objection is that companies as a whole do not have a good environmental record. Paper audits and statements in "environmental impact statements" etc do not mean anything for long term, just for getting a license that's all. I think it is time for politicians' decisions to take a long term view, not pander to markets to get short term advantage.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: We OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

We object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As NSW citizens committed to our natural environment and Indigenous culture, we have had wonderful experiences in the Pilliga, in terms of wildlife observation and experiences with First nations sites.. Any CSG project in the area will threaten its precious wildlife and significant cultural aspects, and the biosecurity of surrounding farmland and its water supply.

As parents and grandparents we want our grandchildren to have access to an unspolied Pillga, so they can have experiences like we have had..

CSG extraction is NOT an innocuous process. The Great Artesian Basin would be threatened, and 97% of the local community do not want Santos to go ahead, as well as the Kamilaroi traditional owners. This community opposition can not be ignored..

Due to the above reasons we strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. We look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important to the replenishment of the Great Artesian Basin.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Existing fracking has proven to be unsafe overseas, open your eyes, the propaganda tv adds by Santos prove they know they are lying. This area does not belong to this generation, short sightedness for profit is obvious.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Ray Palmer

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As we have learned from the past that CSG wells pollute the aquifers and surrounding water tables with Brine and other chemicals. The residents around this area relies heavily on the supply of clean water for farmland, agriculture and well being.

The CSG wells leak methane and the breaking or cracking of the coal seam creates fissures which leak methane in surrounding areas.

The NCCC who is in charge of this fiasco hiding under the so called COVID-19 economic recovery is filled with fossil fuel executives who are hell bent on lining their pockets regardless of the environmental damage.

Do any of these people who have proposed this idea live any where near a CSG Well, I am sure they do not.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

As a person who has grown up in Gunnedah, and have relied on the aquifer for survival, it disgusts me that, those whom I have chosen to lead and act on our behalf, are choosing money over the land, it's natural resources, and continued survival. By allowing damage to the aquifer, which will occur with penetration, you are condemning the land, and contributing to its destruction. I URGE YOU, to please consider the necessity of these mines, and the future of country NSW. They are unnecessary, unneeded, and unwanted.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Having lived in Sydney for 70 years it has been a privilege to be able to leave the city & travel to the country to enjoy everything that nature has given us. Will this be the same for my grandchildren? The effects of climate change & the depletion of our natural resources will have a devastating impact on THEIR future not mine! Our generation has been responsible for too many poor environmental decisions. The Narrabri Gas Project in the ancient Pilliga Forest is just one that it is not too late to change.

Why Gas? Wind & Solar Energy are ways to protect our environment.

Protecting our Aboriginal sites & our plants & animals must be a priority for any projects the government decides upon.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

- And it won't even bring down gas or electricity prices for Aussies!

I care about the north west & don't want to see it polluted by coal seam gas fracturing.

The practice of fracking pollutes the air, water, land, our health & the finances of farmers, land owners & residents. This blatant pollution will only serve the greedy company who wants to pollute for profit & the politicians who make money damaging our environment.

Stop this polluting practice now, I don't use gas & never will but I would use renewable energy instead.

Save NSW, Australia & look after our Australians by saying no to this pollution.

Yours sincerely,

Glen Merrett

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Maya I am a business owner from northern NSW. I am a wildlife carer and a rehabilitator. Much of my time goes into rescues and I am not feeling encouraged by the numbers of survival rates of our wildlife. Our wildlife are struggling as it is with diminished good sources, human population expansion and developments. I am a mother. My child doesn't want to have children because the state of our world doesn't give her hope for her future. The Pilliga Forest and the water around the area supports us in ways which are more valuable than short term money gratification.

The Assessment Report states "the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region." However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

There is not a single benefit to be had by this project, but there are many disasters. As representatives of the people, the government has a duty to follow their wishes.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

This proposed project by Santos does not stack up on any grounds what so ever. Firstly we already have an abundance of the gas being mined and exported overseas. Secondly. this drought stricken Nation can not afford to contaminate our reserves of underground Water as this resource alone is by far, more valuable and precious than any monetary profits that may or may not come from it. Thirdly and most importantly with the advent of Climate Change occurring the Extinction of our Native Species such as the Koala, and more to the point, ourselves will become even more tenuous if this unsound project goes ahead.

What a Calamity it would be to see this last remnant of inland Native Forest go up in flames due to a gas leak from this absurd number of wells that are proposed. and god knows that whenever humans are involved mistakes will occur and Leakes will happen. We only have to look at what has just occurred in Lebanon with the total obliteration of Beirut and its Port to prove this point.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

The report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species.

Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Cathy and I'm making this submission on behalf of myself, my family and my future grandchildren. Although I'm not from this area, I'm doing this because quite frankly I cannot believe that this "project" is even being considered! Even with all the scientific evidence showing the detrimental effects this "project" will have on our land, water, cannot live without water but can live without electricity and gas, our rich farmlands and the environment (Pilliga Forest).

If money was to be taken out of the equation would we even be talking about this. My goodness, it's our water and water is everything. It's our farms, its people's livelihoods and homes. Its sacred land for the Gamilaraay people and haven't our indigenous people lost enough already.

I don't know much about anything really but I do know that we have to stop destroying our wonderful country and our beautiful and precious world.

Surely all the energy that has gone into the "Narrabri Gas Project" could have been spent working on ways of transitioning over to cleaner energy.

Climate change is real and we all need to accept this and make decisions with this in mind.

Please say no to this! Give our future children the chance to grow up in a world like we had, a world with hope how wonderful would this be!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website. This is a submission on the Narrabri Gas Project. I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I'm a young Australian who wants to see our country maintained for future generations, the Pilliga forest is a beautiful part of Australia, and its surrounding farmlands and water are important to Australia and it's local communities.

We know that climate change is a huge problem, and to risk adding to this massive ecological disaster that we are facing is NOT worth it. After the horrific bushfire season last summer it's clear that Australians and Australia need to do all that they can to help stop climate change, and more coal seam gas projects is not going to help. Fracking has been clearly seen to be detrimental to water ways, and water is already a precious resource, keep harm away from water, the forest and the surrounding farmlands of the Pilliga Forest and this plan.

97% of the local community have said no to this project, and to ignore the communities wishes is a breach of their trust and a clear rejection of what is good for the communities of that area. The Pilliga forest is on the land of Gamilaraay people and as First Nations people and the rightful custodians of this land, without their approval this project should not go ahead.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: My objection to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a husband and father and lover of our beautiful Australian agricultural and wild landscapes. The Pilliga forest, waterways and the surrounding regions are far too valuable to our future generations to be ruined by the relatively short term and destructive practices of CSG production. Food production and biodiversity are far more important for the future of our nation.

Renewables are clearly the future of energy production, NOT fossil fuels.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a new mother living in NSW. The way Australia is headed, this land will no longer be fit for our children to enjoy. The land, the water, and the air are the most precious commodities we have! We must protect what remains before it is too late.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding "areas of high cultural heritage value to local Aboriginal groups" fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Furthermore, the Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access

cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Laura Roche

Subject: I OBJECT wholeheartedly to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a veterinarian living with my husband, 3 kids and mother in NW Sydney. I have a lot of solar panels on my roof and have consciously chosen NOT to have any gas-fired appliances in my home. It is my belief that natural gas extraction is damaging to our ground-water supplies. I have been watching for the last 10 years with dismay as Australia follows the mistakes, namely, fracking for gas, of the USA and Great Britain. In particular, I believe that the Pilliga Forests need to be left untouched by this damaging process. Not just because our ground-water is a precious resource, but also because these forests are a biodiversity hotspot, needing to be preserved for future generations, but also because the traditional custodians of this land are opposed to the damaging process. In my opinion, ALL fossil fuels need to be left in the ground and we need to 100% invest in renewable CLEAN energy.

Science says that we need to keep our forests in tact in order to tackle climate change.

Forests are essential carbon storage and remove existing carbon from our atmosphere. Destroying our ground water purity for generations to come is ludicrous. Our food security via our farmlands surrounding the Pilliga depend on this water. Why would we destroy our water supplies in a time of climate uncertainty and an increasing world human population. I would think preserving our water supply would be paramount in humanity's survival into the future for food security reasons.

Placing gas collection stations in the middle of tinder-dry forests in Australia is just asking for more bushfires. This is a major safety issue!

After the bushfires of 2019, our remaining forests need to be protected and preserved IN TACT! Australia's track record on extinctions is higher than anywhere else in the world. The Pilliga forests are included in this!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The damage caused by coal seam gas mining is well documented.

Given the fragile state of our natural environment, this is now the 11th hour for us all to be more mindful about our natural environment; and to put survival not only of Nature and the animals but of us humans as well at the forefront of the planning agenda. We must start to value survival over profit!

The damage likely to be caused by this project to the Pilliga forest, surrounding farmland, water, and in the longer term our climate is unacceptable.

Evidence based scientific studies clearly show that we only have a few year to turn things around and save our climate and thus our Earth....and the future of our children. If the disastrous events in early 2020 are not enough to send us a clear warning about the damage we are causing to the environment and climate ... what more do we need?

Australians has so many other, cleaner options to derive energy, after all we are a sun-burned country.

We want a future of clean and abundant energy and to protect the places we love....and moreover, we want a world worth lining in for future generations.

I therefore strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

The whole proposed project is a nasty quick cash grab that won't do anything good for most people in the area, except for a few jobs and a nice fat profit for Santos' share holders. Profit at almost any risk, or cost, is the failure of capitalism!

Yours sincerely,

Michael Scrivener

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, greenhouse, social and economic impacts.

An Independent Planning Commission hearing has been told this project would become one of the top 100 greenhouse gas emitters in Australia if approved.

Professor Kelly, UNSW, provided the commissioners with data from the Australian government's National Greenhouse and Energy Reporting Scheme, showed that the largest emitter reported releasing 42.7 million tonnes of greenhouse gases last year from its total operations.

The 20th largest emitter was Santos, the project's proponent, which reported releasing 5.8 million tonnes. By comparison the Narrabri project alone would release around 1 million tonnes of greenhouse gases each year, making it the 54th largest emitter in the country.

The company states, 'Our wells are drilled to the highest industry standards.' This proves nothing. This type of argument is fallacious as it does not mean its integrity is secure. We all know that businesses will use this type of argument, but it does not prove the standards are absolutely secure.

Finally, farm land is a limited resource as is gas. We should not persist in using gas to destroy agricultural land, when an alternative already exists.

The future lies in renewables. Until we arrive at such thinking we shall continue to damage the environment.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am making this submission as I feel this area is an unusual semi arid woodland, an important area for biodiversity, with at least 300 native species and 900 plant species.

Please go and see for yourself the forest. Humans need outdoor space to reinvigorate themselves, as well as it being the native animals homes. The other animals in Australia have had a hard enough time with drought, then fire, now people wanting to destroy their habitat for gas!

Leave Pilliga alone. Enough damage has already been done here. Why not promote sensitive tourism, not destruction. Please listen to the peoples wishes

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

While I live in Sydney I have tried to keep across Santos' pursuits in northern New South Wales, South Australia and indeed elsewhere in Australia. Friends who live in the Narrabri region have been persistent followers of Santos' activities in the region. They are fearful of the impact the Gas Project will have in the Pilliga forest and surrounding farmlands.

The Energy Sector in Australia needs constant updating and upgrading. Research is essential. Fair profitability is essential. However, care for flora, fauna and property rights are equally essential. To date Santos has disregarded the rights of property owners (both Native and Private). The impact of random drilling has not been adequately monitored and many scientists and private citizens have expressed great concern over contamination of the water table and damage to surrounding surface areas. Surely 850 (or so) drill sites are far in excess of reasonable exploration purposes.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

There are scores of environmental reasons why this project is unsound. It will negatively impact on the unique beauty of the Pilliga forest, surrounding agricultural land and - in a country increasingly stricken by life threatening droughts and bushfires - it will create an unacceptable waste of fresh water and ensure Australia continues to be one of the highest per capita emitters of greenhouse gases with its stubborn refusal to join the 21st century and make the change to renewable energy. There is NO transition fuel necessary, Australia could change right now to solar and wind. If its governments - both State and Federal - weren't beholden to the power of vested interests, both outside from members of the resources industry and within government itself from its own biased members.

But there's another reason why I object so strongly to this mad rush to destroy what's left of our glorious land in the rush to satisfy the denizens of resources industries such as coal seam gas. Australia continually pats itself on the back over its economic 'success' and its citizens seem to think themselves somehow of above average intelligence and savvy (the Great Mother only knows HOW they reach this ridiculous conclusion!!), and point to how 'rich' we are as the proof. But the face is, we have continued to prosper financially thanks to two things: 1) shoving as many people into this country possible and thereby forcing up house prices to ridiculous and unsustainable levels and creating an unsustainable overseas student bubble which is in the process of bursting and 2) (our politicians favourite) shooting things, ripping down trees and digging shit out of the ground.

Up until now, 'The Lucky Country' has continued to prosper under these two backward looking strategies, but there have been serious consequences that have resulted from our refusal to use our own brains or God given nous, ones that go virtually unnoticed. Every time I hear an OECD report on rankings about... pretty much ANYTHING!!!, Australia is near the VERY BOTTOM of the list for so called advanced countries. You name it - manufacturing levels, money invested into R&D, rates of school bullying, ice (the methamphetamine kind) use, treatment of individuals with a disability, etc etc etc etc - the list goes on and on and on and on. While Australia has gone on coasting from the profits of things that require no creativity, ingenuity or intellectual rigour, it has become the dunce of the world.

And this has worked while the world has been stuck in the past. But things have FINALLY started changing. Our beautiful planet has reached the limits of what she is able to give, and most of the rest of the world is waking up to this. By the time this decade is out, we will find we are living in a completely different world. (I was even reading an article the other day positing that the next generation of Republicans - post-Trump - are very likely to give a nod to their past and reinvent themselves as green crusaders). And Australia. if it is still relying on industries and living with a mindset that hasn't changed since the first settlers/invaders reached these shores in 1788, will finally meet its karma, and its largely ignorant, arrogant populace will suffer the shock of watching its economy tumble to the very bottom of the 'advanced' countries, where, if we are honest, it fully deserves to be. Not only that, but, far from making China the world's pariah as this government is busy trying to do in order to distract from its own heinous behaviour on pretty much any front you care to name but PARTICULARLY on the environmental one, the world will increasingly condemn us for our archaic attitude to climate change (this had already begun in the wake of the bushfires), the destruction of our natural heritage, and the loss of our magnificent fauna, which will inevitably meet

its final demise as the homeland of all our precious creatures is destroyed completely in the name of satisfying the denizens of greed and destruction that propose travesties such as this gas project.

So that's the bottom line. Nothing less than the very future of this country is hinging on decisions like yours. Will you continue to act from a mindset that belongs to the 19th century and the Industrial Revolution? Or will you make a long overdue acknowledgement that we live in a completely different world to that of the Industrial Revolution. Most of the rest of the world is finally waking up and changing, as it must. And if Australia is to have any kind of future, it must recapture the ingenuity it used to display in its long distant past and set its course for a future that doesn't rape its land and abuse our fellow creatures, but instead relies on technologies that leave the least footprint, such as solar and wind. Because that future, increasingly, is now.

You know, when I was reading the guidelines for making this submission, I read a paragraph urging me to tell you that I care because I'm a parent or a grandparent. I am neither of those things, but I still care (very deeply) about the fate of both our land and our coming generations. For my sins, I love this magical, unique country with its deeply flawed, obsessively backward focused inhabitants, I hope you do as well.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts

I believe that coal and gas is heating the planet. Allowing this project will increase green house gases . This in turn is damaging ecosystems and causing imbalance in nature leading to species loss

The Pilgrimage is a beautiful unspoilt area of Australia. It holds great importance to the first nation peoples of Australia housing sacred sites that must

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Corale Parkinson

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a parent and Australian born resident. The Pilliga forest, surrounding farmland and water and our environment need to be protected to ensure that future generations are able to safely live in and enjoy our beautiful country.

My key objections to the project are due to the environmental damage caused by CSG and the impact this will have on the Australian people. Farmers in particular rely on the ground water that is being put at significant risk by allowing this project to go ahead. Farmers in this area have already been significantly affected by drought let alone the others disasters that Australia is currently enduring. It is not fair or just to undermine their livelihood, health and homes to satisfy the greed of others. Salt as a byproduct of the process is an additional concern that not only affects the soil, plant life and wild life, but also the water above ground.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Leanne George

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a concerned citizen and the Pilliga forest, surrounding farmland and water is important to me for environmental and heritage reasons and the risks to our climate are unacceptable due to being a parent.

My key objections to the project are based around numerous scientific studies that we are all well aware of which highlight how ecologically significant this area is and that any gas drilling will cause significant degradation to this area.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Nicole Ireland

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a retired academic from the University of Newcastle. I have been researching the area in question for many years. I am a photographer and work with Aboriginal people of Wonnarua attempting to save sites of significance. The proposed use of Aboriginal lands for gas exploration and extraction will through purpose or accident will cause significant damage. It has been shown in recent mining ventures that even with strict environmental controls there has been damage that cannot be undone. Please reconsider this proposal and look closely at what can be lost before you look at what might be gained. This is a short term plan on a very long term land.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I don't live in the Pilliga region, but feel strongly about this issue because of the effects it will have on me and my grandchildren. We are in a fossil fuel driven climate crisis. We are suffering increased climate risk, sea level rise and much increased bushfire risk. We must stop new fossil fuel and work to move to renewable energy sources.

I am also concerned for the Pilliga locals underground water reserves and their ability to continue to work the land. CSG projects have a relatively short life span and profit for uncaring corporate entities, but will leave permanent ecological damage.

For the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sent: Friday, 7 August 2020 10:31 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I travelled to the Pilliga forest in 2017 to see for myself where Santos propose to sink 850 wells for CSG. I was disturbed to imagine such a vital eco-system and the surrounding, highly productive farmland, being put under threat by CSG drilling and extraction. I understand that the project is opposed by local farming groups and the indigenous people the Gammilaraay, the latter are especially concerned about damage to their sacred sites.

I am deeply concerned by the prospect that the Narrabri gas project will damage the Pilliga Sandstone aquifer in this region, which is an important source of freshwater for irrigation and agriculture. The Pilliga is also the main recharge area for the Greater Artesian Basin (GAB). Scientific studies such as "Uncertainty analysis of CSG-induced GAB flux and water balance changes in the Narrabri Gas Project area" by J Sreekanth, Tao Cui, Trevor Pickett 2017 CSIRO, Australia, concludes that "CSG development could potentially induce flux changes in the GAB aquifer - the Pillage sandstone... This increase in the rate of flow from the Pilliga sandstone to the deeper formation could be considered as temporary flux losses from the Pillage sandstone." (p9).

This analysis, among other studies cast considerable doubt on whether the Pillage aquifer and the GAB can be adequately safeguarded from contamination, and damage to water flows caused by CSG development.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am an Wiradjuri Woman from South West NSW and I stand with all my people against the destruction of our countries forests.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project for its contribution to climate change, global warming and biodiversity.

I am a psychiatrist with particular interest in the impact of the degradation of the planet on mental health. There is clear evidence on the effect of global warming on the rise in disinhibition, aggression, deliberate self harm including domestic violence and presentations to emergency departments. There is mounting evidence on climate change as a contributing factor on major mental illnesses including bipolar disorder; and of urban greenspace as a mitigating factor. Multiple sources point to the fiscal, sociocultural and mental health benefits of renewable sources of energy.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

We must stop our reliance on underground resources such as coal and natural gas. We have the benefit of being in a position to harness above ground natural resources such as sun and wind. We cannot continue to destroy precious habitat to pander to our short term needs. We must draw the line today. Our future is looking more and more bleak. Please do not allow this mine to go ahead. With more droughts forecast together with other extreme weather events, it is so important to plan properly for our future. If we start destroying these areas, we are looking at the long term decline of already endangered flora & fauna to survive. The mine will be a drain on the natural water sources of the area, further exacerbating the issues in regional NSW regarding water security.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a resident in a regional centre on the south-west slopes of NSW expressing my concern about the risks of the Narrabri Gas Project in the Pilliga forest to vital water sources, vegetation and wildlife (including bird species decline) and the impacts on surrounding farm productivity. Moreover this project adds to, rather than ameliorates, our climate risk which is now unacceptable if Australian's (both regional and metropolitan) are to remain healthy into the future. There are valid energy alternatives to this project and political will is needed to ensure these healthy alternatives are prioritised on behalf of the public. Birdlife Australia has documented bird (and other) species decline in our regional area due to ongoing habitat loss and climate change - these impacts will be an inevitable consequence of the Narrabri Gas Project. Globally Australia already has the highest rate of species decline and this is not a record I want to hold for my myself or my grandchildren.

Please take us off this podium.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Ian McKie

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a concerned citizen.

I am concerned that our land is burning summer by summer, that our forests are being decimated by fire and logging, that our native species are threatened with extinction.

I am concerned that gas exploration continues to threaten farmland, water tables and food production.

I am concerned that our government actively supports the destruction of the earth, environment, heritage and economy, against the will of the people who elected them to govern.

If you who are reading this, if you are a parent or a grand parent, you ought to be outraged by this project that will leave nothing for the future.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Nancy Evelyn

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

This is all about making money; it's not about what's best for Australian people and their health and the health of the land; we have to stop destroying our environment!

Yours sincerely,
Lois Stublely

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

Its unbelievable that this intent to devastate the area with 850 (jesus christ) coal seam gas wells and countless roads, power lines and pipelines which will irreparably damage its cultural, ecological and hydrological values has even been given a hearing.

Risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers is a risk not worth taking. Once compromised I doubt the damage can be undone....we would be doomed as a Primary Producing nation, and god knows what other ramifications there might be.. Has anyone looked into the future outcomes of meddling with our underground water.

and Climate Change??? well....This proposed but deadly gasfield would add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Honestly,,, when will some commonsense return? There is no benefit for any Australians in this kind of destruction for money - it certainly won't bring down gas or electricity prices for Aussies!

I want to know the benefits of such an abhorant destruction of our land?? Who would this benefit??? Who??

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Especially given the current global health crisis, and the extreme highlighting of Australia's dependence on imports. We cannot afford to place a single company profit margin OVER the food safety and security for Australia's population. This would be extremely shortsighted and I believe, retrospectively, would be viewed scathing as poor leadership and decision making.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Why risk all of this and more for a resource that is not needed and can easily be substituted with other forms of energy which do not damage our land and those who live on it.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am concerned about the short term and long term damage the extraction of methane from the coal seam will do in relation to the water, farmers and natural environment.

The infrastructure that will be needed and maintained will destroy an already fragile natural environment which supports both farming communities through water and native species which are already under stress due to changing climate. We had a disastrous and unprecedented bushfire season which destroyed a large portion of bushland and billions of animals; do we need to send more native animals, plants and ecosystems to the brink of collapse?

At a time when we need to invest heavily on renewable energy sources and move away from coal and gas, do we really want to extract more gas and introduce more greenhouse gases into the atmosphere, into an already warming planet where ice glaciers are melting at an alarming rate.

As Australians who value our natural environment we need to protect what we have left as one day it will be too late!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a retired schoolteacher with a university degree in environmental science. I am making this submission because the Pilliga forest, surrounding farmland and water is important for Australian agriculture and the natural environment.

The proposed operations will have a long-term detrimental impact on the subterranean water supply over a wide area, and change the landscape in western NSW beyond the immediate area. Recent extreme climate and pandemic events highlight the importance for Australia to preserve our rural environments so as to be self-sufficient in food and other resources.

Recent technological advances in the renewable energy sector provide employment opportunities and now render unnecessary the use of fossil fuels and their detrimental impacts.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: I am a resident of the Lismore area which has also been targeted for CSG mining proposals. I am a school teacher, deeply concerned about the long and short term impacts that such mining has on the natural environment, both for farming and ecological value and how decisions we make now will impact on the quality of life for our young people. Our country needs to be developing sustainable energy sources as well as trying to preserve our precious fauna and flora for present and future generations of Australians: not proceed with outdated and destructive mining operations that only offer short term solutions to our energy needs but long term damage to our water, soil and cultural heritage.

My first objection to this proposal is the impact it will have on the surrounding native forest. You are well aware of the devastation to our forests and fauna from the bush fires that tore through our forests for nearly 5 months last year, leaving possibly 3 billion animals, birds and reptiles perished and the survivors with no habitat and left to face a slow death from starvation. Many believe this is due to climate change and the burning of fossil fuels that contribute to it. I cannot believe that you are even considering such a proposal given the urgency of this country's environmental issues: the destruction of forests, the alarming rate of species extinction. Equally important is the protection of ground water and healthy farmland for food production that will be impacted by this proposal. I was horrified by the impact similar gas mines would have on water ways and soil in the Lismore area and I don't want to see this happen in the Pilliga.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Assessment Report states the project would “put downward pressure on gas prices.” However the Institute for Energy Economic and Financial Analysis (IEEFA) states production costs at the Narrabri Gas Project are some of the highest in the country, with estimates to supply major domestic markets as high as \$9-10/GJ. Currently in Australia customers seeking long term contracts are paying between \$9-12/GJ to secure gas, leaving little room for profit generation. The project will clearly be at a globally uncompetitive price for gas.

The Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The future of the Pilliga Mouse is threatened by this project due to the spread of invasive predator species, and consequent increased rates of predation; the increased fragmentation from access tracks and dispersed clearance potentially creating unfavourable microclimates, open space, and traffic disturbances. The loss of habitat is significant.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

While the Assessment Report states the project to be "critical for energy reliability and security" we do not have a gas shortage especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal. The modification to the original Development Consent will satisfy the market need for more gas during the cooler winter months.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Yours sincerely

Sonia Kayed

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Robyn Breheny and I love and respect our beautiful country. Australia is known Worldwide because of our diverse natural environment and it's heritage which is unique. Before Covid, tourists flocked to Australia because of our wonderful environment and our cultural heritage not because of how many trees we cut down or landscapes we dug up and destroyed.

What are you thinking by even considering this Gas Project and what about our children's children and so it goes on. What will they have to remember of the wonderful country that we know and have grown up with. God knows they will already have a huge financial debt and then there's climate change and the destruction of aboriginal heritage by the mining companies such as Rio Tinto. Why can't you see what's in front of us by allowing all this environmental damage just for the sake of short term financial gain.

The whole Pilliga Forest area is so important to the biodiversity of western NSW. It's a large area but It's so important to keep it that way. There has already been so much degradation and clearing of land over the great divide for crops and livestock. I know we need crops and livestock but we also need large areas for our native flora and fauna especially after the recent bushfire season where we lost millions of species.

It's time to stop!!! And think!!!!!! Please!!!!

We need to re-evaluate our values and our ethics and Australia's future if we want to save the Australia we grew up with and love. Its time to put energy and money into sustainable industries and manufacturing. Build an Australia we can ALL be proud of.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a very concerned Resident of Australia. I am making this submission asking for those on the Commission know that they need to protect the Pilliga forest, surrounding farmland and water supply which is vital to the region. Why you The Commission would allow these risks to our climate are unacceptable, due to being a Grandparent and watched with horror the blatant destruction of all that is precious to this Beautiful Country of ours, its Environment as well as its Flora and Fauna, there will be nothing left for our Grandchildren's children.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding "areas of high cultural heritage value to local Aboriginal groups" fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. 35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater. One just has to look at other areas in other countries especially the USA where whole towns have had to be evacuated because of the poisonous gasses that have leached and the rivers of fire from the methane leaching into the water ways.

Due to the above reasons I strongly object to the Narrabri Gas Project. I implore you as a fellow Australian to caretake our precious Country not allow Foreign Destroyers loose, it is time to put a stop to Big Business riding roughshod over us.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As a personal adjunct to all the scientific and environmental objections to this development, I must add that I have been searching for hours for the detailed submission that I wrote years ago in opposition to this very same development....without any luck I might add.

As a Knitting Nanna against CSG, I have had personal insight into the plights of ordinary folk who have lived near these developments, the noise, the air quality, the ruination of their gardens and of course, the situation where their tank water supply has been rendered undrinkable. These life stories then sink even further into despair when you add contracts and money and verbal harrasing...such as that which contributed to the sad, sad suicide of George Bender. These stories are but a micro view of the disastrous effects on a human scale...even more long lasting, are the effects of CSG mining on a regional, national and global scale.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am writing to you today to urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Megan Rhys-Jones
Burradoo, New South Wales, 2576, Australia

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significantly detrimental environmental, heritage, social and economic impacts.

I am a retired academic and former Dean of Science. My father's family also comes from near Hillston, NSW, and I have a deep appreciation of the necessity for the preservation of our arable lands and the ground and artesian waters in as pristine a condition as possible.

The proposal to extract gas by fracking has significant risks for leakage of fracking fluid into the artesian basin waters and for the deposition of large quantities of salt into the ground water and artesian waters. The company is not able to guarantee that their environmental controls will be able to cope with all the potential climate events that will occur and may damage their their storage ponds and/or flood them. Nor can they guarantee that the rock formations above or below the coal seam are intact and able to withstand the fracking pressures everywhere. The environmental risks are held by the people and not the company. The financial benefits accrue mostly to the company. Also gas is a fossil fuel with limited usefulness and very significant climate damage potential. The excuse that it is a 'transition' file is demonstrably false, as well as financially untenable if the real price for dealing with the resulting CO2 release is added.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Santos has already been fined for polluting an aquifer. Are you going to wait until it happens again before acting on behalf of farmers and traditional owners? The sustainable farming of food and the preservation of the ecosystem are far more important than sinking 850 coal seam gas wells and using toxic chemicals for a doubtful economic return. New roads, power lines and pipelines will irreparably damage the cultural, ecological and hydrological value of this land.

It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Gas is in oversupply worldwide. Australians will not benefit from lower prices either.

Please do not allow this project.

Yours sincerely

Leslie McInnes

Subject: I OBJECT to the Narrabri Gas Project water is sacred money does not buy clean air clean water for communities and our children CSG destroys quality of water

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent. It is important to have clean water to drink water is sacred money from mining is non productive for the land of Pilliga

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Terence Jordan

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Please stop and think of our future, not just economic gain now. We won't have an economically secure future if this project destroys the aquifer. You will be remembered as the stewards who sold out the land and the people.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Gavin Heywood

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

To: Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am making this submission as I do not believe that CSG is environmentally safe, or has been proven. The threat to the Pilliga forest and surrounding countryside, and the unknown affect on the water supply to this area is totally unacceptable. Once this project is allowed to proceed it will start a torrent of other such endeavours, all of which will have a detrimental affect on the environment.

Clean water is in shortage throughout the world, and the unknowns of CSG are not worth risking what little water Australia has. I'm not a scientist but it doesn't take a lot of intelligence to know that CSG is wrong.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

From: Patrick Conaghan <campaigns@good.do>
Sent: Friday, 7 August 2020 11:44 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Patrick Conaghan. I'm a professional sedimentary geologist with a PhD (now 'retired') of more than 60 years experience. I taught Earth Sciences, mainly geology (including sedimentary basin analysis), at a major university in Sydney for 30 years, and I am still an Honorary Research Associate at that institution. Hence I consider myself scientifically literate in regard to the geological and ecological impacts that would follow from the development of the proposed Narrabri CSG project.

I grew up in SW Queensland within the Great Artesian Basin (GAB) region, where our town and the regional pastoral and farming economy were dependent on artesian water, and exclusively so during periods of drought. Hence I well understand the value of guaranteeing the integrity of the aquifer system of the GAB, The proposed Narrabri CSG project will not be able to guarantee that integrity. Moreover, the fauna and flora of the Pilliga Forest will be irreversibly impacted by the proposed CSG project, including many species of fauna that are now vulnerable or endangered, such as the Koala. Additionally, the proposed CSG project will exacerbate the Global Heating crisis that is threatening the entire ecosphere (and is already destroying the cryosphere) of our planet, including human survival. Accomplishing the 2005 Paris Agreement's target of limiting the increase of post-industrial global surface temperature rise to 1.5 degree C is already looking to be impossible without an an

nual compound reduction of 7% or more in global emissions, hence adding even more natural gas to the economy is not justifiable. That addition by the proposed Narrabri CSG project would be exacerbated too by the inevitable fugitive methane emissions that would result from this development. These cumulative threats to the integrity of the local ecology and the local and regional artesian groundwater system of northern NSW that would result from this proposed CSG project, and beyond that to the planetary Ecosphere and human survival in the longer term, are not acceptable, and hence the Cautionary Principle of not allowing this project to proceed should be followed and it should be disallowed. The future survival of all of our grandchildren will be imperilled by the cumulative effects of the development of this and similar projects, and hence I object to it being allowed to proceed.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Patrick Conaghan

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am not against progress but this is more about water to all of us living in this region than gas. There is enough evidence of artesian drawdown caused by CSG mining in the Condamine area.

I am concerned by the fact that CSG companies have drilled deeper bores for landholders that have run out of water and have forced the landholder to sign confidentiality agreements to prevent the community from knowing the full story.

I believe this alone should be enough evidence that we as a region and as a nation should not allow CSG mining to go ahead in the Narrabri area.

Yours sincerely,

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

After close to a decade of local and broader resistance to this plan I wish to now add my voice to protecting the Pilliga forest on the sacred land of the Gamilaraay people in the recharge zone of the Great Artesian Basin.

The Pilliga forest, surrounding farmland and water is so important to all Australians. We want a future of healthy farmland, clean and abundant energy and the assured protection of such an important place for all of us to enjoy and appreciate.

Enhanced risks to our climate are unacceptable for our generations to come, especially when there are better alternatives. We don't want dirty gas!

I am a 73 year old retiree - I want my children and grandchildren to inherit a safe sustainable future. I also want to ensure ongoing Indigenous connection to this country and prevent significant adverse environmental impact.

Due to the above reasons I strongly object to the Narrabri Gas Project.

I want to be added to the ninety seven percent of the local community who say NO to Pilliga CSG—and the tens of thousands of Australians who have already voiced their concerns about this project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

CSG is a rightly controversial method of extracting fossil fuels from the ground. It has been proven time and time again around the planet that the environmental and consequent social impacts of such an activity are well in the negative.

Flowing on from that, the Pilliga is also a sacred region for the original inhabitants of this land, and to dig up, extract and pollute such a special area is disrespectful to their ancestors.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

This project, any gas (CSG) project has been proven to contaminate ground water, causing irreparable harm to the environment now and into the future.

The environment, the farmers, their families, their cattle and crops - life itself, relies on clean, uncontaminated water in a supply that is independently determined to be more than adequate for these basic human and environmental needs.

Gas projects world wide have proven over and over again to contaminate the aquifer, the land, the air, the water coming out of taps ... and cause severe and sometimes life threatening conditions especially for children. Children have been known to have blood coming from their noses as their previously good health rapidly deteriorates.

Some years ago I was in Canada and the USA and there was strong protests against gas projects in these countries because of the documented severe harm to children, adults, finances and environment.

I mention finances because there were multiple situations where families, especially the children of these families, had become severely ill due to the unseen, odourless emissions from the gas projects and wanted to sell their homes and move elsewhere to protect their families but no one would buy their homes - they had become worthless due to the KNOWN severe contamination and degradation of land, water and quality of life in all areas these projects take place.

It seems like pure insanity that anyone would consider that this is ok to go ahead with anywhere.

The proof of its devastation is well documented and so any persons authorising such an unnecessary project that is a known pollutant and that will definitely interfere with the good health, peace and quality of life that every citizen of Australia is legally designated, makes absolutely no sense.

I ask you to please look to the 'precautionary principle' in making your decision and reject the gas project on the grounds that it is KNOWN to cause great harm to life, to the environment ie. earth, water and air, and presents a grave risk to the health and well being of humans, especially children, and to animals.

A project such as this would also affect everyone's right to a peaceful existence and their right to not be subjected to and potentially affected by a KNOWN toxic pollutant

I am a parent and grandparent, but in reality we are all parents, grandparents and caretakers ie. 'people who take care' in considering and acting in the supremely best interests of the future generations.

The American Indians considered that if 'no harm' could be foreseen for 10 generations as a result of their decisions then they could proceed BUT if this could not be guaranteed then what right does anyone have to leave a polluted, contaminated, dangerous, unusable and uninhabitable land - water - air for our children and children's children.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I have been visiting the Pilliga and surrounding areas for many years and have always appreciated its unique natural qualities. I am very concerned that this proposal will negatively impact not only on the natural environment but also on the livelihoods of communities who depend on the environment for sustainable tourism. The proposal will vandalise this area's greatest asset.

Due to the above reasons I strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Janet Cohen

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am concerned about global warming and also want to protect the wildlife that lives in the Pilliga forest.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Thirty-five threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: OBJECTION LETTER_ Narrabri Gas Project

Dear Independent Planning Commission,

Please include my name and my objection to the Narrabri Gas Project submission on your website.

I totally object to the proposed Narrabri Gas Project because it has hugely significant environmental, heritage, social and economic impacts that outweigh the energy argument of Santos.

Not only is this proposed CSG gas project a dirty fossil fuel venture, it is in the Pilliga forest, the sacred land of the Gamilaraay people, and an area of Australia that must be protected.

As we know from the impacts of CSG in other countries it is a dirty fossil industry that is not sustainable and goes against the Paris Agreement. Australians want a future of clean and abundant energy and to protect the places we love.

This is why I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I trust the voices of Australians will be heard and the Pilliga will be protected forever.

Subject: I OBJECT to the Narrabri Gas Project

Hi,
Please make a decision that takes ownership of your responsibility to our country.
Previous leaders have tried to protect our country responsibly for future generations.
The current government has been negligent in this regard.
It is NOT business as usual anymore.
The environment has reached a critical point.
Pollution and degradation of soil and water has already caused too much damage.
This proposal is bereft of merit apart from the bottom line at the end of this year.
This proposal will leave us financially worse off in ten hears time.
Please stop the gas project now.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

This area is Country for the Gamilaraay people whose objection to the use of their land for the exploitation of an environmentally destructive resource, should be sufficient reason to reject this proposal.

I travel widely in Australia and am familiar with this area which has significant ecological importance and is in fact unique in our country. The record of CSG exploration is self evident as being environmentally damaging and there is no opportunity for repair once such a fragile ecosystem is harmed.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I strongly OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I strongly object to the proposed Narrabri Gas Project due to its disastrous environmental, Toxicity it imposes on the community, heritage, social, and devastating economic impacts. It should be considered to be an act of Ecocide and breach of our international agreements.

I believe that I am a very well informed Australian, with an engineering degree(s), worked in mining and manufacturing for well over 40 years, and have spent a great deal of time personally investigating the "Fracking Process." With my background and personal efforts in investigating this process and I wish to make it clear that the Fracking process is an act of Ecocide that must be stopped everywhere on our planet and not limited to this specific application. Rather than speculate the dangers and cry later, how about we learn from the wealth of information that exists out there providing hard evidence on the damage experienced:

Exhibit 1:

A picture tells a thousand words, and in this case, a documentary by the name of "Frackman" is a horror story where children suffer chemical burns, sickness and endure a painful death.

Ref 1: <https://en.wikipedia.org/wiki/Frackman>

Based on this video evidence alone, it is inconceivable that any think official could consider inflicting fracking operations unto the public. No amount of retrospective legal action or "Sorry" is going to compensate the communities that still suffer from these current operations.

Take note of the legacy of rotting sites that are spewing noxious gas into the atmosphere and will continue to leak gases through the fractured soil substructure. Science is telling us that there is climate change and whether we agree to it or not, Nature goes by its own rules. Just look at COVID which does not care what you believe.

Exhibit 2: Published 2013 & Written by: Elizabeth Ridlington Frontier Group John Rumpler Environment America Research & Policy Center :

https://environmentamerica.org/sites/environment/files/reports/EA_FrackingNumbers_scrn.pdf

Extract of

"Damage to our natural heritage: Well pads, new access roads, pipelines and other infrastructure turn forests and rural landscapes into industrial zones. • Infrastructure to support fracking has damaged 360,000 acres of land for drilling sites, roads and pipelines since 2005. • Forests and farmland have been replaced by well pads, roads, pipelines and other gas infrastructure, resulting in the loss of wildlife habitat and fragmentation of remaining wild areas. Table ES-2. Water Used for Fracking, Selected States State Total Water Used since 2005 (billion gallons) Arkansas 26 Colorado 26 New Mexico 1.3 North Dakota 12 Ohio 1.4 Pennsylvania 30 Texas 110 West Virginia 17
6 Fracking by the Numbers: Key Impacts of Dirty Drilling at the State and National Level • In Colorado, fracking has already damaged 57,000 acres of land, equal to one-third of the acreage in the state's park system. • The oil and gas industry is seeking to bring fracking into our national forests, around several of our national parks, and in watersheds that supply drinking water to millions of Americans. Fracking has additional impacts not quantified here—including contamination of residential water wells by fracking fluids and methane leaks; vehicle and workplace accidents, earthquakes and other public safety risks; and economic and social damage including ruined roads and damage to nearby farms"

Exhibit 3:

Water Quality and loss: My long association with Paul Newell and the practice of “Landmanship” ref <https://landmanship.com/> has proven to many the importance of water flow, and the effect on our environment. The loss of water from our ecosystems and the permanent poisoning of groundwater will permanently destroy

- the quality of our food production not only in this area but also downstream.
- The habitability of the surrounding areas will be severely impacted as evidenced by two very compelling documentaries “Frackman” and Gas lands

In summary, there is over whelming evidence that Fracking is a destructive process, and for what possible gain?

- The vast majority is exported with practically no return to Australia. We are ranked 6th in the world alongside Dubai. Dubai is reported to collect \$45 billion in taxes whereas Australia collects a zero in comparison
- The global Oil and gas economy has prices dropped, and there is an oversupply of the product. Why are we traumatizing the public with this obscene practice for no public benefit?

Due to the above reasons, I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regard to this submission.

Sent: Friday, 7 August 2020 12:38 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

All my family came from NSW Central Western area and we were often in the Pilliga district. A number of my family members live in the Narrabri area and I know they are very concerned about the possible damage to the aquifer. My family were all farmers and I studied agriculture and I know that forests are important for country but more importantly, water is one of the most precious resources in country areas and mining disturbances will affect the water of the artesian basin which will be encountered with all the drilling. Fracturing the surrounds of this basin will mean a loss of future water for this whole area. The impact on current population in the North West of NSW and all future generations will be massive and tragic.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Protect the Pillinga Forest.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am an eighty year old Australian grandmother so my concern for the future of Australia is mainly for my grandchildren and all those of future generations. It is quite unacceptable that governments can give permission for Santos and other large mining corporations to destroy valuable aspects of the environment without considering their impact on future generations.

The Pilliga forest, surrounding farmland and water, is important to the future of Australians. Allowing Coal seam gas projects will cause unimaginable destruction to this land and all future generations of Australians. The environment generally will be horribly affected and this is totally unacceptable to me as a grandparent. During my life, I have seen, been aware of and even experienced numerous events, many of them coal and gas mining that have irrevocably damaged the environment.

The Pilliga provides habitat for numerous native animals, some of which are already endangered or threatened. The squirrel glider is one of the better known of these species. Australia has an appalling reputation internationally as being one of the countries with the largest extinction record of native species of any other country. My grandchildren all actively do what they can to preserve native animals and when we have had a year of disastrous bush fires they are horrified that the government is still considering approving projects such as Santos Coal Seam Gas mining which will further damage our wildlife.

I lived in Canada for ten years, and was there made aware of the way that coal seam gas and other mining projects consistently failed to adequately dispose of their waste. There were many instances of the waste filtering into natural water systems and damaging surrounding farmland.

There are many other reasons why I strongly object to the Narrabri Gas Project and I hope that other submissions will express some of these. Thank you for the opportunity to comment and please be aware of my concern for future generations of Australians. Please do not allow the Santos coal seam gas project to go ahead. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Dear Commissioners,

Please reconsider Santos' proposed Narrabri gas field in the Pilliga forest.

The drilling, production, and usage of natural gas has been proven to be highly detrimental to our environment. This is in a region which is uniquely important for Gomeroi people, for biodiversity and water resources.

The opening of 850 coal seam gas wells and

associated infrastructure will devastate this region. Moreover the impact on the broader environment in terms of emissions and damage to the hydrological cycle cannot be justified in terms of energy or financial returns.

I urge you to please reconsider this proposal and save the reputation of Santos.

Yours sincerely,

Tim Hand

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include our names and submission on your website.

This is a submission on the Narrabri Gas Project.

We object to the proposed Narrabri Gas Project due to its significant environmental impacts.

The scientific evidence is established. Use of fossil fuels, including gas, must be wound back to avoid climate change, that will not only result in the extinction of much of our biodiversity, it will eventually make much of the planet uninhabitable for our own species.

Developing new gas fields may appear to be an easy way of boosting the economy, especially with the economic disruption caused by the Covid 19 pandemic, but it is a short-sighted development that must be rejected.

As well as the long-term consequences of continuing to develop sources of fossils fuels, in this instance there are also more immediate possible consequences of the proposed Narrabri Gas Project development on farming, including effects on water availability to these local activities and to community water supplies.

Due to the above reasons we strongly object to the Narrabri Gas Project. We look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I believe the negative impacts of this project firmly outweigh the positive. These include:

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Lauren Anderson

- And it won't even bring down gas or electricity prices for Aussies!

I have observed over time the negative affects on aquifer water in QLD, particularly in the Chinchilla region. I lived in Tamworth for many years and travelled the North West of NSW on a regular basis for work. We need to protect this area from the negative affects of the CSG FRACKING.

Please reject the approval of this gas field in the Narrabri district.

Yours sincerely,
John Humphries

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga forest, surrounding farmland and water is important to me as it is essential to protect our forest and water supplies against the real forces of climate change and future fires and damages to the aquifers caused by fracking. These precious forest areas and land need to be protected so future generations can survive climate change.

My key objections to the project. We need to protect our underground water supplies which have already been damaged by mining and fracking activities. These activities pollute the earth and the water making the lands unsuitable for agriculture and poisoning the water for both flora and fauna.

Australia has many iconic species which are unique and endangered by man's constant encroachment into their habitats. We need the precious forest and water to survive.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

Why do you not think of the future? The land and agriculture are essential assets and if damaged or destroyed you are responsible for a crime as this land and water will never be restored. We must protect and value what we have in the Pilliga.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project.

As an Australian I feel it is my duty to do all I can to protect this precious land of ours and its natural resources. I want to see Australia step up to the plate and become the world leader in climate change that we should be instead of our current ranking of 56th in this year's CCPI which is, quite frankly, embarrassing.

I believe we are the lucky country and we have a government that listens to and cares about its people therefore I don't understand why it continues to promote the expansion of fossil fuels.

This shortsightedness and inaction of our leaders led to the devastation of land, homes and lives wrecked by last summer's bushfires as well as severe water restrictions. The beautiful koala - much loved the world over - is on the brink of extinction in our state and instead of protecting their habitat we're considering pillaging more of it... as if the fires haven't already wiped out enough.

What we do have is an abundance of sunshine and wind, and the ability to harness this clean source of energy. During Covid 19, our government has put the wellbeing of its people first: if only it would see climate change as a matter of equal urgency.

Keep our forests, protect the Pilliga, keep the salt in the ground and out of landfill, keep our koalas, keep the chemicals out of our water supplies, invest in clean, inexhaustible energy sources such as sunshine and wind that are readily available and fulfill our potential as world leaders in climate action.

Throw out the Narrabri Gas Project. It is not in the best interests of our land, our animals and our people, nor is it the way of a sustainable future for Australia. It's time for new thinking.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I hope this finds you well.

I am writing to you urgently to ask that you refuse Santos' proposed Narrabri gasfield in the Pilliga forest.

I would be very grateful if you took the time to read through my reasons for requesting that the Narrabri coal seam gas project not be approved below.

- Local landholders will be unable to continue farm operations in this area of biophysical strategic agricultural land as Santos coal seam gas project will pollute nearby groundwater reserves with toxic salts. These reserves are crucial to farming operations and it will bring up 1.5GL of water and more than 13,000 tonnes of salts every year. It will put the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers at great risk.

-The proposed 850 coal seam gas wells and countless roads, power lines and pipelines will cause irreversible damage to the cultural, ecological and hydrological values of the Pilliga State Forest.

-The biodiversity and water resources in the Pilliga State Forest are very important to the local Gomerioi people.

- At a time when public opinion is demanding an even greater response to cut our carbon emissions this gasfield alone will contribute almost an additional 1 million tonnes each year to Australia's greenhouse gas emissions. This is way out of line with our targets to reduce emissions by more than 7 million tonnes a year.

- Furthermore it won't have any positive impacts for Australians in bringing down our electricity or gas prices.

Thank you so much for taking the time to read this email and for considering the strong repercussions this project would have on thousands of Farmers, local residents and Gomerioi people.

Yours sincerely,
Kindest Regards.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

When one thinks about the devastation to flora and fauna of the 2019 drought followed by the 2019/20 bush fires it is unbelievable that any government, which has the nation's interest at heart could even consider, for a moment, that this project is a good idea.

Recently I was informed that the huge gas infrastructure built on Curtis Island, Gladstone, Qld will soon become a obsolete. Why, because although gas is a little better than coal in terms of pollution the world is turning away as should we and concentrate our efforts building renewables. Ah, but what about all those Royalties? Let's return our efforts into making an economy that makes things not just dig it up...pump it out....and sell it overseas ...exacerbating our own destruction in the process.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

When I heard that the Pilliga Forest was being opened up for 'mining', or 'fracking' for gas I was stunned. I have walked this forest and have deeply enjoyed its aesthetic and ecological value. On top of that I understand and appreciate its economic value to local farmers. I am aware of the economic disaster that could occur for local farmers if this land is violated. We also know that almost 90% of local farmers DO NOT want the mining to occur. When will we listen to the people instead of being controlled by the transnational mining interests of the few. Recent events in West Australia indicate how little these mining giants care for heritage and environment. This valuable wilderness sitting as it does above aquifers that form part of the Great Artesian Basin is a significant resource that we need to preserve. We know that fracking and related activities will and do compromise the quality and quantity of the water that is an essential part of life on this very dry continent. We need this essential resource more than we need gas. There are other sustainable alternatives. We should have learned by now that climate change is already happening. I have just survived the bush fires near Bermagui and I am amazed by the total lack of preparedness for the changes that are beginning to occur. We need to start by introducing a moratorium on all fossil fuel related mining and develop sustainable and renewable sources. And, in this particular case, we need to protect the ecological and heritage values that make the Pilliga unique.

We are at a crossroads. The pandemic has revealed so many things about our failures. Covid 19 is a dry rehearsal for the Climate Change disaster that is about to happen globally. We need fresh paradigms that enable us to live sustainably into the future. If not, then what is our legacy? What are we leaving for our children?

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I'm writing to object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am an Environmental Manager who has grave fears for the future environment of Australia under the gung-ho development plans of the LCP Government.

The plan to allow coal-seam gas mining in the Pilliga Scrub is particularly stupid.

Biodiversity will be compromised, precious water may no longer be available for the primary producers in this rich farming area, and gas mining will exacerbate the risks of Climate Change. These are unnecessary risks for little return, except for the off-shore miners who will make sure all their profits go out of Australia.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a private citizen in my 70's. I oppose the Narrabri Gas Project on the following grounds:

Further exploitation of gas reserves is inconsistent with our obligation to the generations following mine and Australia's international obligations to rapidly reduce the fossil fuel emissions that contribute to global warming. We need instead to transition rapidly to renewable energy.

The Great Artesian Basin is a vital water resource in our dry and drying continent. We cannot afford to risk damage to it.

The proposed operation poses a threat to the Pilliga Forest, which provides habitat to threatened a number of threaten species of birds and mammals, including the koala and squirrel glider. This must be preserved. Australia is losing threatened species at an alarming rate further intensified by the recent bushfires.

Any destruction of the Pilliga Forest would threaten the rights of the Gamilaraay people to whom it is sacred land.

For the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Louise Dortins

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is an objection to the proposed Narrabri Gas Project.

It will have significant environmental, heritage, social and economic impacts.

I am a NSW resident and have enjoyed the beauty of our national parks and forests for many years and hope to continue to do so.

At this time of Climate Change emergency it is vital that we save our damaged waterways and grow more forests and not lose what we have.

Because of the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Vera Yee

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The continuous clearing of the bushland that we have left, the polluting of our air and the destruction of the scarce water sources is such a worry. It is a sad world that we are leaving behind for the next generation. The question is , why do the people in charge of these projects care so little for the future.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. We don't need more fossil fuels, but more renewable energy.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Richard Telford

I have, over the last 20 years, been replanting native trees to replace dead trees on my families property at Coonamble. I guess I have planted around 300 trees at about a 50% success rate, bore water has been a major factor in the survival of the trees and I fear that contaminated bore water will bring a halt to this program and impact severely on already established trees. You cannot risk a resource that is so vital to inland NSW.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to the negative impacts it will have on the people of Narrabri, the unique natural life in the Piliga state forest, and the heritage value of the area.

If this project is approved, it will be a betrayal to future generations of Australians both local to the area and across the country. The risk of damaging and altering the water supply to the local area is too great, particularly for farmers in the surrounding area. Additionally, the carbon emissions that will be released over this projects lifetime will contribute to climate change, further damaging Australia's future.

The effects on wildlife will also be large if this project is allowed to occur. Given the fragile state of the environment in new south Wales, it would be a tragedy to fragment what is one of the largest intact areas of conservation value in the state. Scientists have predicted that koalas may be extinct in NSW by 2050, and to destroy koala habitat in the piliga will aid in further condemning them to extinction in our state.

I strongly object to the Narrabri Gas project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission. The opportunity exists to protect a key area of conservation value in our state, as well as the livelihoods of the people of Narrabri for years to come. I hope you will consider this application through the lens of whay will be right for future generations of Australians and what they deserve.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I grew up in Narrabri when cotton was in it's early stages and not as destructive as cotton is now. Even then, locals were concerned about the environmental impact of this industry. Then the mining started after I left the town and we were appalled at the impact of this industry when we visited and went for a drive 'for pleasure' and to check out possible quiet roads for a planned bike ride. Trucks have taken over all roads towards Boggabri. Now we have to deal with yet another industry that is likely to ruin the local water supply! Is there no end to this destruction and pollution? Do people matter at all, or is economics allowed to ruin our world, so that some can have all they want and those that get in the way are ignored and get nothing.

I am battle weary. I don't usually write submissions but it seems we now have to write them to maintain the basics in life. I feel very sorry for future generations. We try, and will continue trying, but governments continue to let us down.

I am not a scientist, but have read widely enough to understand that this proposal is not environmentally sustainable. Will we wake up before it is too late??

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Objection to the Proposed Narrabri CSG Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I wish to strongly object to the proposed Coal Seam Gas (CSG) mining in the Narrabri region due to its significant environmental, heritage, social and economic impacts.

The Pilliga forest is an iconic part of the Australian landscape, enjoyed by many visitors to the region and containing several Indigenous sites of significance. The region is also a vital reserve for flora and fauna biodiversity, comprising habitats that are not well represented in other parts of Australia, and is home to many threatened and endangered species. Australia already has an abysmal record when it comes to mammalian extinction and cannot afford to further risk damaging precious habitats.

The Pilliga forests also play an essential role in ecosystem services, through recharging aquifers that feed into the Great Artesian basin.

The surrounding farmland is also a significant resource, supporting vital communities in the region.

My strong objection to the proposed Narrabri Gas project is due to numerous environmental and economic concerns, chiefly that coal seam gas mining:

poses an unacceptable risk to the environment of the region which will have detrimental affects on the local communities and environment for decades to come

threatens to contaminate vital groundwater, both in the local area as well as much further afield as the local aquifers feed into the Great Artesian basin

Is a dirty and dangerous activity that has long lasting impacts on the long term future economic viability of natural assets, agriculture and the viability of local communities.

has not been adequately assessed in terms of environmental and economic impacts, as shortcomings in the EIS relating to this project have been widely reported

does not represent a smart investment for Australia's future energy security. Instead the money would be better spent on clean renewable fuel sources

Is untenable as far as the contribution that the mining process and gas produced would have on global climate change due to the methane and other greenhouse gases emitted.

This represents an unfair impact on future generations who will have the burden and cost of dealing with climate change impacts.

represents a false economy in terms of the real costs when "externalities" and risks are considered. This places an unfair impact on future generations who will have the burden and cost of dealing with the impacts of climate change as well as water and soil contamination.

As a tax payer I find the threats that this project poses to natural and community assets for decades to come cannot be justified for the short term profit of private enterprise. We simply cannot afford the real cost of this in terms of increasing droughts and severity of bushfires and weather events.

Australia could and should be a world leader in renewable industries, instead of which we are an international embarrassment with this government's continued support of coal seam gas at the expense of investing in a clean and healthy future for all Australian's (current and future generations) as well as the environment on which our health, wellbeing and livelihoods ultimately depend.

Thank you for the opportunity to comment. You can include my name and submission on your website. I look forward to hearing from you in regards to this submission.

Subject: I STRONGLY OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project. I am happy to include my name and submission on your website.

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I cannot fathom why it so hard to understand the environmental destruction and its impact on climate and community. Is this not obvious in spite of the mounting research and evidence. Why is it that we need thousands of submission to restate the obvious.

Is it because corporations are so powerful and heavily involved in political donations and therefore decisions are made to benefit their financial outcome?

Is it because ex politicians and political staff take on senior roles in these corporations and therefore know how the system works and have friends to clearly help work out how to get around the public system.

Is it because, although we know that renewable energy sources are better but haven't figured out how to make money?

I sound cynical, but it appears we haven't learnt anything in spite of the unprecedented bush fires and natural disasters that we have faced as a community to change our thinking. It leads me to think that there MUST BE MORE TO IT.

It is certainly not about reducing the price for customers!.

Once our water sources are damaged it is not easy to fix the problem. Have we not learnt anything from the destruction of the Murray Darling for commercial benefits?

I cannot see any evidence that says gas is the only option and a good option. Using the current environment and claiming jobs and economy is foolish and short sighted. Even if this project was done extremely well, it may reduce air pollution and even water use compared with other fossil fuels, however, it will not be better than renewables and will slow the adoption of renewables. If done poorly, release toxic chemicals into water and air. Primary threats to water resources include surface spills, wastewater disposal, and drinking-water contamination through poor well integrity and an increase in volatile organic compounds and air toxics locally are potential health threats.

Negative impacts of fracking

"According to a number of studies and publications GAO reviewed, shale oil and gas development poses risks to air quality, generally as the result of (1) engine exhaust from increased truck traffic, (2) emissions from diesel-powered pumps used to power equipment, (3) gas that is flared (burned) or vented (released directly into the atmosphere) for operational reasons, and (4) unintentional emissions of pollutants from faulty equipment or impoundment-temporary storage areas. Similarly, a number of studies and publications GAO reviewed indicate that shale oil and gas development poses risks to water quality from contamination of surface water and groundwater as a result of erosion from ground disturbances, spills and releases of chemicals and other fluids, or underground migration of gases and chemicals."—General Accounting Office report on shale development, September 2012

As I say, there is much evidence if you want to make the right decisions, unless you have decided to find information that will support your preconceived decision.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Having been brought up in NSW, I know this area. I am making this submission because I believe it is important to keep the Pilliga forest from being destroyed as it has important plant and animal habitat; being part of the Great Artesian Basin, holds water for surrounding farmland which could be polluted by the gas; and it is important that we transition away from fossil fuels including gas to stop climate change and give hope for future generations. I have recently become a grandparent and despair about our future.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Registering my objection to the Narrabri Gas Project

Dear members of the Independent Planning Commission,

I am writing this submission to register my serious objection to the proposed Narrabri Gas Project in the Pilliga forest due to its significant environmental, heritage, social and economic impacts.

As a grandmother I feel passionate about preserving this precious environmental heritage for my grandchildren, local Indigenous people, and all the residents of NSW to enjoy in perpetuity.

In addition to the potential impacts of the planned extraction and gas pipes on natural habitat and biodiversity, I am deeply concerned about the harm it will inflict on indigenous heritage and cultural sites and the devastating effect it will have on groundwater, including seepage of contaminants which would extend far beyond the boundaries of the proposed site.

For these reasons, amongst many others I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to receiving your response.

Kind Regards

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Assessment Report states the project would “put downward pressure on gas prices.” However the Institute for Energy Economic and Financial Analysis (IEEFA) states production costs at the Narrabri Gas Project are some of the

highest in the country, with estimates to supply major domestic markets as high as \$9-10/GJ. Currently in Australia customers seeking long term contracts are paying between \$9-12/GJ to secure gas, leaving little room for profit generation. The project will clearly be at a globally uncompetitive price for gas.

The Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The future of the Pilliga Mouse is threatened by this project due to the spread of invasive predator species, and consequent increased rates of predation; the increased fragmentation from access tracks and dispersed clearance potentially creating unfavourable microclimates, open space, and traffic disturbances. The loss of habitat is significant.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

While the Assessment Report states the project to be "critical for energy reliability and security" we do not have a gas shortage especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal. The modification to the original Development Consent will satisfy the market need for more gas during the cooler winter months.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the

Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Please consider the long term future of this planet.

Yours sincerely,

John Goff

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Michele and I am aware of the permanent destruction CSG has had throughout other areas of Australia and the world. It is completely unacceptable to destroy any part of our country for short term profit. The land and water will be a complete wasteland when these companies have finished with it. Future generations will be left asking why you allowed this to happen. Australia is a dry continent and needs to protect all of its waterways as a major priority. Once the land and water are destroyed there is no going back. There will be no future in these areas for humans or animals alike.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a concerned citizen who highly values the natural wilderness that remains in Australia. It is imperative to save what we can for future generations to enjoy and the wildlife that make it their home. Far too much has already been destroyed and negatively impacted already. We cannot ford to continue this destruction as once its gone its gone forever and cannot easily be brought back. Our children and their children and the environment depend on such remaining heritage areas and the clean water the artesian basin provides.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Please stop this development now without further delay.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga Forest is unique and must, must, must be saved. It is 2020 now and we can do better. We need clean energy and we must protect our natural environment not only for ourselves, but for future generations.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Australia is a dry continent...we should be looking after what water and waterways we have.

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Money is nothing if we do not have clean water and a clean environment.

This is sacred land and we must all respect the Gamilaraay people and this precious land of theirs. They must not be bullied into this...they must be listened to and their cultural heritage preserved.

I am a parent and a grandparent and I am truly frightened at the way Australia is heading. My grandchildren will not have the pristine air, water and environment that I grew up with...which is so incredibly sad. Our precious farmland is also fast disappearing.

The greedy CSG companies should be putting their money into clean and renewable energy. Not dirty coal.

Climate change is REAL and we must all wake up and change our ways before it is too late.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. The pilliga is one of last intaked ereas of native forest in nsw because it is a great sandy sponge that feeds the underground water. Coal seam gas mining here could ruin Australia's underground water and the murray darling system so the water they don't use (probably for free) will be poisoned .

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Subject: Submission: I object to the Narrabri gas project.

I am deeply disappointed that the Government has chosen to ignore my previous submission opposing this project, along with hundreds of similar submissions. I oppose this project for the following reasons:-

- Our continent is becoming drier. To allow the use of millions of litres of Artesian water is irresponsible. We can no longer be certain that it will be replenished adequately.
- We are the largest gas producers in the world, yet we sell it overseas for cheaper than Australians can buy it. We do not need MORE gas, we just need CHEAPER gas.
- There is a burgeoning national and international renewable energy industry that will soon overtake the need for the use the need for CO2-emitting products.
- The Pilliga is a region of cultural significance to the Gameroi people. The interests of these people must not be ignored. True reconciliation will never be achieved when governments ride roughshod over the rights of our first people.
- This is prime agricultural land. We cannot afford to destroy farmland that is required to feed nations and provide incomes for farmers and associated industries.
- Santos is a foreign entity and will take the profits out of this country. This is not tn the best interest of Australia or Australians.
- Climate change is real, and you are proposing to allow the production of greenhouse emissions. Once again this is totally irresponsible decisionmaking by the Government, and totally ignores the environmental risk that it poses. .
- In light of all the above, this project must not be allowed to proceed.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am a grandfather and very concerned this catastrophic project will be approved.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Over 20 years, Santos will remove 37.5 billion litres of water from deep below the Pilliga and treat it in the Leewood water treatment facility. This treatment will produce up to 840,000 tonnes of solid salt, laced with heavy metals, for which Santos still has no disposal plan.

Removing this water will cause depressurisation and loss of water in the Pilliga Sandstone, the southern recharge of the Great Artesian Basin, which outcrops in the Pilliga.

Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas.

Santos anticipates leakage from the precious alluvium that lies above the coal seams despite claiming there is no linkage between the water sources. Landholders that rely on the GAB, the Gunnedah Oxley Basin and other groundwater in the area are strongly opposed to the project.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Robert McLaughlin

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a very concerned Australian citizen who is witnessing the fast destruction of Australia's special features in landscape, animals and natural assets. Haven't we seen enough decimation of our precious Australian heritage in 2020. Now the precious and unique Pilliga forest, and its surrounding farmland and water is threatened by another risky and short-sighted proposal which will result in more destruction more unwanted dirty gas and threat to the Great Artesian Basin in the Pilliga forest. What heritage will be left for future generations if such projects continue? When will the advice from scientists who are the knowledgeable experts be heeded? Shouldn't the advice and wishes of wise 1st peoples be accepted and the objections of thousands of Australians who say NO to Pilliga CSG be heeded?

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Christine Forgacs
Earlwood, New South Wales, 2206, Australia

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am making a submission to oppose the Narrabri Gas Project as I feel the risks far outweigh any advantages. After the catastrophic bush fires in 2019 and 2020 it's time to start taking climate change seriously. We can't possibly be taking it seriously if we are backing a development like the Narrabri Gas Project. As I understand it the project will allow Santos over twenty years to remove 37.5 billion litres of water from deep below the Pilliga and treat it in the Leewood water treatment facility. This treatment will produce up to 840,000 tonnes of solid salt, laced with heavy metals, for which Santos still has no disposal plan. Removing this water will cause depressurisation and loss of water in the Pilliga Sandstone, the southern recharge of the Great Artesian Basin, which outcrops in the Pilliga. Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas. Santos anticipates leakag

e from the precious alluvium that lies above the coal seams despite claiming there is no linkage between the water sources. Landholders that rely on the GAB, the Gunnedah Oxley Basin and other groundwater in the area are strongly opposed to the project. The livelihoods of the people already trying to make a living in the area must be of paramount concern, these indigenous Australians and farmers must be given priority.

Coal seam gas brings upheaval and division to rural communities. A CSIRO survey in 2014 found that only 6% of local people living in Queensland gas field areas thought the industry had improved their lives while 42% said that they were "not coping" or "only just coping". Santos' own assessment found that there would be "almost certain" impacts on housing affordability for Narrabri residents, which will disproportionately affect low-income households and Indigenous people, who are far more likely to be renters. Claims of job creation are crucial to the project's justification, with an anticipated average 190 jobs created locally and 322 in the rest of the state, but this comes at other industries' expense. Santos' own assessment admits there would be lost employment in agriculture and manufacturing as a result of the project, despite unsubstantiated claims of flow on jobs in NSW. Santos claims the gas field is needed to "increase supplies" of gas, b

ut there's a glut of exported gas from Queensland and ships of Australian gas are sitting idle unwanted. This makes the extraction of gas even more ludicrous as we are destroying our environment for gas of which we have a glut. The majority of social impacts are proposed to be mitigated through the use of the Gas Community Benefit Fund, the use

of the Community Consultative Committee and a range of Landholder Compensation agreements, ignoring many of the negative impacts of the project.

The Pilliga is a hugely significant landscape for Gomeroi people. Santos' Aboriginal cultural heritage assessment identified 90 known Aboriginal cultural heritage sites in the project area, including rock shelters, burials and historic camps and hearths. Santos promises its drill pads and infrastructure will avoid these sites, but they're based only on previous work. No detailed new surveys for Aboriginal cultural heritage have taken place yet. Santos proposed to undertake detailed surveys after it gets approval and avoid newly found sites of high significance but by that time it will be too late to stop the gas field.

The Pilliga is the largest temperate woodland in eastern Australia and CSG will industrialise 95,000 hectares of it, clearing nearly 1,000 hectares in small patches for well-pads, infrastructure and gas lines, including removal of several endangered ecological communities. How can this be considered? Only limited surveys were actually undertaken as part of the assessment of the gas field, but these found 10 threatened plants and 35 threatened fauna in the gas field area, including pygmy possums, koalas and the Pilliga mouse. The Pilliga once hosted one of the most important koala populations in New South Wales, but the species is now on an extinction trajectory in the area. With so much habitat and lives lost to recent bushfires, it is crucial to the survival of the koala that its bushland habitats be spared industrialisation.

Total greenhouse gas emissions produced by the project could be 127.8 million tonnes of carbon dioxide equivalent, or 5 million tonnes a year. In a time when Australia is struggling to meet its commitments under the Paris Climate Agreement, this one gas field would increase Australia's greenhouse gas emissions by nearly 1% per year. We are heading in the wrong direction we should be reducing our gas emissions, not increasing them. Mobilising methane in coal seams could lock in ongoing fugitive emissions of this potent greenhouse gas for decades to come. Globally, the UN Environment Program's Production Gap Report in 2019 found that, "With average lifetimes of 20 years or longer for pipelines, terminals, wells, and platforms, the time to begin planning for a wind-down of gas production is, as with other fossil fuels, already upon us." Their report found that to achieve the Paris Climate Agreement goal of keeping average global warming well below 2 degrees, global g

as production needs to peak by 2030 and decline after that. To meet the safer 1.5 degrees warming limit, gas production needs to peak this year.

What we need to consider is the future of our country. If global warming continues we are on the knife's edge. The recent devastating bushfires are our wakeup call as we have ignored all previous warnings. The time to take a stand on climate change and greenhouse emissions is now. We need to transition to renewable energy and do it now.

Thank you for considering my submission.

Yours sincerely,

Megan Rhys-Jones

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

Furthermore the Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

Finally NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I live by the beach and I spend everyday on it. On the weekend's I explore our nature reserves and national parks. This is Australia. This is what makes us a unique country. This is what it means to be an Australian is to be outdoors in the sun. This is what tourists and backpackers come to see. Therefore our land beaches and forests are the most significant and sacred thing this country has. It is our responsibility to protect them. If we destroy nature then we have nothing for the tourists to visit and that's a massive part of our economy. So if you can't understand our love for nature and only understand economy then protecting our most valuable asset is just important to you as it is too us.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Active in the solar industry, I am particularly sensitive to exploiting land using last century strategies that have been proven to severely impact future generations' quality of life.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regard to this submission.

Yours sincerely,
Dino Christopoulos
St Pauls, New South Wales, 2031, Australia

o: Independent Planning Commission

Re: Submission re Narrabri Gas Project

Privatisation of wealth. Socialisation of costs

Dear Commissioners,

Australia is one of the harshest continents in the world, yet we find ourselves continually selling our resources without question, and without consideration of what is left behind.

A healthy economy is not just about money, but about people. An economy can't exist without a sustainable approach, and when all the gas is extracted and Santos moves on, there won't be any clean water to pick up where they left off. Gas extraction in this area is a false economy, because the harm caused to the agricultural sector will far outweigh the benefits of short term gas profitability.

As droughts get worse, water will become scarcer and food prices will increase dramatically. We don't need to mine gas for local energy needs given our solar and wind generation capability, and we don't need to sell it internationally given the rapid reduction in fossil fuel usage globally.

My reasons for objecting to the proposed Narrabri Gas Project include:

a) The local Community is against it. CSG projects are divisive as the community is polarised into those who benefit (usually from out of town) and those who suffer (the traditional farming community, tourism operators, indigenous communities etc).

At last count 470 submissions have been received from Pilliga locals with about 2/3rds against, meaning that less than 200 locals have made submissions in support of the project. Santos has been in Narrabri for over 5 years sponsoring sports clubs, establishing a headquarters, conducting test operations and generally sucking up to everyone. There must be at least 1000 people who have 'had a free lunch.' All this and still only 200 locals who are willing to write in support of the project says that even those who stand to gain personally don't think its worth it.

b) Risk to ground water. Imagine what it must be like to be in a farmer in the Pilliga, utterly dependant on aquifers for your livelihood, living 'under the sword' of 850 wells potentially leaking highly toxic material into the water supply at any time. CSG has created elevated rates of stress and mental illness wherever it operates in farming communities and the Pilliga is particularly vulnerable due to its dependence on a reliable supply of groundwater. Though I do not live in the Pilliga, I do depend on bore water during our dry season and there have been occasions (noticeably last year) when our bore was contaminated from 'upstream' spraying in our catchment area. This is bad for our produce, but worse is the mental stress of not knowing whether we can trust our water supply. This is an inkling of what the farming community in the Pilliga will have to deal with.

c) Short term Gain. Long term Pain. The project carries unmanageable long-term consequences due to unique geology of the area which is porous, and a recharge area connected to the Great Artesian Basin. Santos's test wells have already leaked and they had to be forced to admit their failures rather than coming clean when it the leaks occurred. Santos's modelling of the impacts of its operations is low-level and both science and experience show that leaks are inevitable.

If Santos were prepared to pay a bond to cover the costs of maintaining the capped wells and repairing any leaks for the next 500 years then sure, let it go ahead, but Santos won't, and they can't because the cost of fixing even leaking pipe hundreds of feet underground is astronomical, never mind 850 of them.

Therefore, this project is a privatisation of profits, which Santos and its shareholders will take, and a socialisation of costs, which the NSW taxpayer and the Pilliga community will bear for decades (if not centuries) after the wells are capped and Santos has left town.

d) Unfavourable comparison to other gas projects:

If you're going to drill a single well into a offshore massive gas deposit (conventional gas) and extract large quantities for the next 30- 50 years, all the while having enough money to keep an eye on things (and shut it down properly) that's one thing. And if you're going to drill through impermeable rock to reach a coal seam (unconventional gas in a more suitable location) that will deliver a small yield for 10-20 years, that's less desirable, but maybe you could think about it. But if you're going to drill through sandstone which is full of caves and underground rivers and has a unique, little-studied water purifying biology that feeds the entire region, then fracture the ground below to release gas, depressurise the whole system in ways that you can't model, and 20 years later fill the pipe with concrete and walk away hoping that everything will stay where it belongs for the next 500 years, it just doesn't stack up .

e) Unfavourable comparison to renewable technologies: Investment in clean energy makes sense economically and environmentally, creating sustainable, long term local jobs and local skills.

Renewable energy is already competitive, battery and other storage methods are progressing fast to the point of replacing fossil fuels as baseload power, and markets are generally moving away from fossil fuels.

f) Climate change impacts: In a best case scenario, Coal Seam Gas contribute to climate change with a similar intensity to coal. If one adds fugitive methane emissions the intensity is far higher because methane is 29 times

more potent than CO2 as a greenhouse gas (recent studies suggest it will overtake CO2 as the lead contributor to climate change).

Please listen to the 98% of people who object to this proposal, ignore the self-interested remainder, and reject this short-sighted proposal,

With thanks for your thoughtful consideration and for bearing this responsibility for our future.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I love the natural environment and want there to be a natural environment for children in the future. The Pilliga Forest is home to more than 800 plant species and many fauna. There are some many animals who, including endangered wildlife like koalas who depends on forests like these to survive. I don't want the forest to perish in the name of gas and want it in tact for my nieces and nephew to see.

I am objecting to the gas project because i don't why we need another gas company causing lost of wildlife and destruction to the soil and native plants when we already have energy from the sun which we can harness. Scientists say we have less than 10 years to stop climate change, so enabling a gas project to go ahead will only accelerate the climate crisis we are already facing. We've already had one of the worse bushfire late last year and early this year. This gas project will only accelerate more fires driven by increase emissions. NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity. The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am writing to express my opposition to the proposed Narrabri gasfield in the Pilliga forest.

Over 20 years, Santos will remove 37.5 billion litres of water from deep below the Pilliga and treat it in the Leewood water treatment facility. This treatment will produce up to 840,000 tonnes of solid salt, laced with heavy metals, for which Santos still has no disposal plan.

Removing this water will cause depressurisation and loss of water in the Pilliga Sandstone, the southern recharge of the Great Artesian Basin, which outcrops in the Pilliga.

Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas.

Santos anticipates leakage from the precious alluvium that lies above the coal seams despite claiming there is no linkage between the water sources. Landholders that rely on the GAB, the Gunnedah Oxley Basin and other groundwater in the area are strongly opposed to the project.

Coal seam gas brings upheaval and division to rural communities. A CSIRO survey in 2014 found that only 6% of local people living in Queensland gasfield areas thought the industry had improved their lives while 42% said that they were “not coping” or “only just coping”.

Santos’ own assessment found that there would be “almost certain” impacts on housing affordability for Narrabri residents, which will disproportionately affect low-income households and Indigenous people, who are far more likely to be renters.

Claims of job creation are crucial to the project’s justification, with an anticipated average 190 jobs created locally and 322 in the rest of the state, but this comes at other industries’ expense.

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

We object to the proposed Narrabri Gas Project due to its significant impacts on our environment.

The risks are unacceptable due to extensive areas of native forest that will be need to be cleared. Many of our native flora and fauna species that are already in peril because of rampant land clearing will be further decimated. Australia needs to rely on solar generated power for our energy needs.

What will Australia's environment be like for future generations if projects such as this are allowed?

Is this a consideration that your committee will take into consideration during your deliberations?

Our country can't afford the destruction that will be the result of this proposed development.

We object to the environmental damage that will result from this proposed development and the prospect of further acceleration of the globes climate change.

Due to the above reasons we strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. We look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am a grandmother writing to urge you to please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Coal seam gas brings upheaval and division to rural communities. A CSIRO survey in 2014 found that only 6% of local people living in Queensland gasfield areas thought the industry had improved their lives while 42% said that they were "not coping" or "only just coping".

Santos' own assessment found that there would be "almost certain" impacts on housing affordability for Narrabri residents, which will disproportionately affect low-income households and Indigenous people, who are far more likely to be renters.

Claims of job creation are crucial to the project's justification, with an anticipated average 190 jobs created locally and 322 in the rest of the state, but this comes at other industries' expense.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Shale gas fracking industry continues to go broke with \$300 billion in losses and 190 fracking companies going bankrupt. In a major new report released this week, audit, consulting and tax advisory firm Deloitte details the current state of the U.S. shale industry. Chock full of interesting data, the study concludes that the overall shale business peaked in 2019 without turning a profit in aggregate. One of the study's major findings is that, since 2010, the industry as a whole in fact "registered net negative free cash flows of \$300 billion, impaired more than \$450 billion of invested capital, and saw more than 190 bankruptcies."

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

From: Nadia Danti <campaigns@good.do>
Sent: Friday, 7 August 2020 4:54 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission regarding the Narrabri Gas Project.

My name is Nadia Danti, I am a farmer, and I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts. I strongly object on its significant environmental, heritage, social and economic impacts. I am worried about the cumulative impacts of this extractive project on the limited water resources in the region and the ramifications it will have on an already ecologically sensitive, thirsty landscape. I am concerned about the farmers who are reliant on this water for their livelihoods and their capacity to feed their communities. I am really worried about the Pilliga forests on the sacred land of the Gamilaraay people. These forests provide critical habitat for threatened species and are a life system we all depend on for our own existence. We must protect the forest, especially after losing so much in our state after the bushfires last summer.

The science tells us that gas is a highly polluting fuel, a green house gas and that it's unnecessary in our nations energy mix. The AEMP (Australian Energy Market Operator) just released a roadmap detailing what an optimal national electricity market would look like to 2040 if it was designed with a focus on security, reliability and the lowest cost for consumers. It describes a diverse system built on large and small-scale renewable energy supported by a range of dispatchable power sources that can be turned on and off when needed. It says renewable energy may at times provide nearly 90% of electricity by 2035, the amount of gas-fired power will fall as pumped hydro and batteries come online and there is no place for new coal-fired generation. Confirming that new gas-fired power is not essential for a grid increasingly based on renewable energy, and gas prices will need to stay low if it is to compete with alternatives, according to the government agency responsible for t

he electricity system.

I completed a Bachelor of Science in Conservation & Wildlife Biology 8 years ago where I learnt about global warming, the impact of fossil fuel extraction on ecosystem health and the urgent transition needed to renewable energies and regenerative land management practices. I am deeply concerned why those in leadership roles not listening to the science that should be informing our decisions, or to their people (97% of the local community say no to Pilliga CSG—and tens of thousands of Australians voiced their concerns about this project with a record breaking 22,700 formal objections in 2017).

I strongly object to the Narrabri Gas Project.

We must ban all CSG now!

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Nadia Danti

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Assessment Report states the project would “put downward pressure on gas prices.” However the Institute for Energy Economic and Financial Analysis (IEEFA) states production costs at the Narrabri Gas Project are some of the highest in the country, with estimates to supply major domestic markets as high as \$9-10/GJ. Currently in Australia customers seeking long term contracts are paying between \$9-12/GJ to secure gas, leaving little room for profit generation. The project will clearly be at a globally uncompetitive price for gas.

The Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The future of the Pilliga Mouse is threatened by this project due to the spread of invasive predator species, and consequent increased rates of predation; the increased fragmentation from access tracks and dispersed clearance potentially creating unfavourable microclimates, open space, and traffic disturbances. The loss of habitat is significant.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

While the Assessment Report states the project to be “critical for energy reliability and security” we do not have a gas shortage especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal. The modification to the original Development Consent will satisfy the market need for more gas during the cooler winter months.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater. EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Marshall-Cormack Ryan

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The project would drill 850 CS G

Wells in the Pilliga Forest . We have lost so many trees and forests in the recent bushfires . Our koalas are on the brink of extinction . Our farmers must be protected from the pollution that these gas wells will cause . Our precious water must be protected from the environmental pollution that the drilling will cause .Our Indigenous People must have their voices heard and protect their sacred land . Our native animals must have their habitat protected .

Australia has the highest rate of animal extinction in the world .

We live in one of the sunniest continents on the planet , where are our solar panels ? Renewable Energy is the way to go !

As a mother and grandmother it is my duty to protect our precious environment for future generations.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Karin Olah

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I object strongly to the use of the land, the jeopardising of the forest and the threat to the water table pose by CSG . CSG mining does not have the support of the general public, and the local community say no to this development.

As a doctor I am concerned about the health implications of this form of mining. As a father I don't want this government making decisions like this when the consequences to future generations are at least unknown, at worst, they represent environmental damage which will take generations to resolve. The dangers of CSG have been identified and documented. Massive land clearing is also planned as part of the project.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Australia can survive without CSG. The economic future lies in renewables, the fastest growing energy commodities.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

From: Michael Nay <campaigns@good.do>
Sent: Friday, 7 August 2020 5:47 PM
To: IPCN Enquiries Mailbox
Subject: Submission: The Narrabri gas project should NOT be permitted to proceed!

Dear Commissioners,

Can I please urge you to reject Santos' proposed Narrabri gas-field in the Pilliga forest, for the reasons listed below:

- The Pilliga is uniquely important for the original inhabitants of this area, Gomeroi people, both for biodiversity and water resource reasons.

- The impact of 850 coal seam gas wells, access roads, power lines, pipelines and other developments required to access this gas will irreparably damage its cultural, ecological and hydro-logical values.

- Drilling the gas wells would result in bringing to the surface 1.5 gigalitres of water and more than 13,000 tonnes of toxic salts every year. This would create an immediate threat to the Great Artesian Basin Southern Recharge, the Gunnedah-Oxley Basin and also to local aquifers.

- This gas-field would also add nearly 1 million tonnes every year to Australia's greenhouse gas emissions, when our task is to reduce emissions by more than 7 million tonnes a year.

- There is no compelling argument that the development of the Narrabri gas-field will bring down gas or electricity prices for Australians (but it would enrich Santos!).

Yours sincerely,

Michael Nay

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. There are numerous reasons for stopping it.

The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. I also visited this area last year and I was able to experience this and talk to local people about their connection to the land. It is also uniquely beautiful.

The proposed gasfields project, with its 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage the cultural, ecological and hydrological values.

We all know how destructive climate change is to our world, so how can you contemplate bringing up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers??

How can Australia possibly act as a responsible global citizen if this project goes ahead with the gasfield adding nearly 1 million tonnes every year to Australia's greenhouse gas emissions? Our goal is to reduce emissions by more than 7 million tonnes a year, not add to them.

Yours sincerely,
Roe Schroeder

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am an educator and I am surrounded every day by bright young people. I cannot help but wonder what kind of future they are facing when their leaders constantly make decisions like those that have led to the Narrabri Gas Project. COVID has given us an opportunity to build back better, restarting our economy with green solutions. Returning to the same old highly problematic ideas and stealing the future from under the noses of children of today is not a solution. I do not want to have to keep going to work and look my students in the face, knowing that they are being betrayed by their own government for the sake of short-term profits.

The Pilliga remains a vital part of our freshwater supply and is a refuge for our native wildlife. We know that coal seam gas will lead to degraded farmland, groundwater, waterways, air quality, and the health of workers and nearby residents.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

It is my grave concern that CSG damages the water supply irreversibly. That a decision to allow CSG mining is not in the best interests of Australia; concerning our ability to survive the droughts that are increasing in our country.

The water Santo's need for this project is enormous and we do not have the water they require to frack. There has been decreasing water supplies for farmers to grow crops due to lower than average rain falls.

"As the pressure in the GAB has declined and the water table drops, mound springs (where groundwater is pushed to the ground surface under pressure) have begun to dry up in South Australia and Queensland. Associated paperbark swamps and wetlands are also being lost and it gets more and more expensive to extract the groundwater for irrigation and other commercial applications." (Eamus.D, 2015)

If allowed CSG practices will pollute the dwindling water supplies of the artesian basin. We need that water to continue to sustain life and the countless farms on 1.7 million square kilometres of this interconnected network. If the recharge beds get contaminated in any way, these CSG practices could pollute the water sources of nearly a quarter of the land mass in Australia.

The land where the proposed CSG project is situated is traditionally owned by Gomeroi people. It is populated and has unique cultural and spiritual significance with continued use. It is the water source for its inhabitants and supports the large swathe of rich agricultural lands and commercial towns in the region.

Unconventional CSG practices are not scientifically sound, as stated in this quote in reference to contamination leaking from existing CSG wells.

"According to the NSW Environment Protection Authority, the groundwater aquifer downstream of the leak contained 20 times the acceptable level of uranium for drinking water. This is concerning given the long timescales and effort involved in groundwater clean-up, and the fact that the region affected is an area of recharge for the Great Artesian Basin." (Currell.M, 2014)

My ultimate concern is that Santos have nowhere to put the waste and will not be able to regenerate the land. It would cost them more than they could make to take the waste away. Shale gas produces mass toxic and salt waste, the damage done is irreversible, nothing grows in salt, taking all of the lands future potential away.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions.

We can't afford it

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Pilliga forest, surrounding farmland and water is important to you and all life. The harm we do to others and to the natural world affects your quality of life.

We need to conserve our natural ecosystems. As members of a community that is a responsibility, to ensure that the planet we leave children, is as good if not better than the one inherited. That is called

“Intergenerational Equity”, a principal enshrined into Australian law, which is being ignored.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Jeanette Davidson

New South Wales, 2460, Australia

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga forest, surrounding farmland and water is under attack, and will be destroyed by fracking operations, as might the aquifers. You should take the "precautionary principle" approach when water supply is at stake, as we cannot afford to have any water sources contaminated beyond recovery in Australia.

In this time of the Climate Crisis, a bigger crisis than the current COVID19 pandemic, we should NOT be investing in fracking and gas extraction and burning of gas. This gas is methane, if it escapes to the atmosphere, it contributes to global warming 28 times more powerfully than CO2 does - why risk it?

Even when it is actually burnt, the CO2 enters the atmosphere, and contributes to global warming as well, especially when gas is burned in large quantities. Why risk putting more pressure on our very existence on earth?

I have already objected to this project by signing many petitions and writing letters to politicians about it. I don't see why we have to keep objecting to such an obviously stupidly destructive project. It should just be STOPPED. Forget Coal, Forget Gas, Forget Oil. We cannot do this any more. We need to invest in massive renewables before it is too late!!!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Objection to the Narrabri gas project

To the Independent Planning Commission,

This is a submission on the Narrabri Gas Project.
You can include my name and submission on your website.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts, and I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values; and It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. Sustainable energy resources, of which we have an abundance of in this country, such as wind & solar are a much simpler & cheaper way to achieve this objective.

I travelled through this area just recently, and was saddened to think of the degradation that could occur to the landscape, water table and flora & fauna if this project proceeds. It seems an insane plan to me.

Due to the these reasons above I most strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment, and I look forward to hearing from you in regards to this submission.

Yours sincerely,
Susanna Foran

Subject: Save our beautiful country. I object to the Narrabri gas project. Solar and Wind are they way to the future of Australian industries

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gas field in the Pilliga forest which is short sighted and out of kilter with what Australia and the World expect.

I care for the Gomerai people who are marginalised and their attachment to country is being ignored putting dollars before people.

Our environment is more important for Australia with its unique biodiversity.

We need to protect our water resources.

I say not to coal seam gas wells.

I say not to roads, power lines and pipelines will irreparably damage Australia's cultural and ecological values.

Please do not destroy the Great Artesian Basin, the Gunnedah Oxley Basin and local aquifers.

We do not need more greenhouse gas emissions when we should be lowering them.

I would rather Santos invested money into Solar and Wind farms which are the way of the future.

Yours sincerely,

Bev Morris

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

All in all there is no viable reason for such a damaging and unprofitable project to go ahead. There will always be small areas of energy, the negatives outweigh any positives here. For all of the above and as a moral Australian citizen, I strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Sent: Friday, 7 August 2020 7:51 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

The Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo. The Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

The Assessment Report states the project is "critical for energy reliability and security" Why? We do not have a gas shortage, especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal.

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: Submission: I object to the Narrabri Gas Field Project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gas field project, because this will damage the natural ecosystems of the Pilliga Forest. Relatively intact forests of this size are coming under threat all over the world, leading to extinction of species and general degradation.

As well, in this world of Global Warming, we really need to minimise all combustion processes because these release CO₂, yet this whole CSG recovery plan by Santos will promote combustion and lead to massive amounts of CO₂ being released. Even further, the recovery process itself releases a lot of Methane into the atmosphere, which is also a known Greenhouse Gas.

The whole concept of burning gas needs to be phased out, to stop the rise of Global Warming.

While I sympathise with the industrial need to exploit the resources of sequestered energy, and the enormous effort and knowhow applied here, I think we have a responsibility to phase out widescale combustion, and stop burning coal and coal seam gas.

Yours sincerely,
Raymond McLaren

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

EDIT HERE: I am a very proud Australian who is constantly amazed at our wonderful country and constantly discussed with the amount of industries/organisations that want to destroy so much of this special land to harvest its bounty while Not considering ,and in many cases destroying it's precious flora and fauna.

The Pilliga forests and all the farmland And precious water Within these landscapes are part of a whole , you destroy or disturb one area it impacts and changes/damages other very important natural landscapes and with that plays a huge role in creating the condition for climate change.

I am a parent of 2 grown sons who with my husband And I have Explored and many parts of this country, I have 2 grandsons now and my wish is for them to enjoy and experience the astonishing beauty of our great land.

We have on return visits to area that we have visited over the years. Have been gutted by what we humans are doing to this great land.

We have to stop, think, look, listen plan, fix and heal before its too late.

I strongly support the never tiring effort of the Wilderness society to try and right some of the wrongs and to prevent other offences to our land and it creators. Their efforts in finding all the right reasons why this should not proceed Is exemplary and I strongly support their findings.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

Fracking is bad news in the United States of America's . Dangerous senseless and plain stupid activity. Stop being greedy. No is No!

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As farmers, my husband and I are living at the forefront of climate change. Any moves to increase the use of fossil fuels will only exacerbate these effects.

We are also concerned at the impact of the gasfields on fellow farmers and communities within the area of the planned Narrabri gasfield. With insurers refusing to cover farms affected by the pipelines, the outcomes are not looking positive.

Therefore, I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

To even contemplate this gasfield, with its appalling risk to the aquifers and the thousands of tonnes of salt that will have to be disposed of is IMO lunacy.

Australia is already the worlds largest exporter of natural gas and should we need gas for our own industries then the government should legislate that the gas producers reserve that gas for our use. To further assist our economy the government should forego any resource licence fees related to the gas reserved further benefiting Australian industry.

Bottom line there is no economic necessity for this project, and the risks involved are total unnecessary

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

Dear Commissioners,

I find it utterly disgraceful and appalling that any consideration is being given to the potentially destructive project from Santos.

I am dumbfounded by the lack of comprehension shown by our government.

Granting permission to Santos' proposed Narrabri gasfield in the Pilliga forest, would have devastating and far reaching effects for the environment and the livelihoods of local residents.

I only hope our government has learnt from the mounting evidence of unfixable mistakes made in the past through gas mining.

I urge you to please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Pilliga is uniquely important for Gomeroi people, for biodiversity and for water resources.

Yours Sincerely,
Meg Brose

Subject: I OBJECT to the Narrabri Gas Project: No to CSG -lock the gate

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Santos was driven out of my area and their destruction of land and the ecosystem was prevented. The protests that were orchestrated need to be remembered by this company and acknowledged by the independent commissioner.

My key objections to the project are:

The harm to local flora and fauna ecology. The prevention of extinction of the above, is more important than one company going bankrupt. This land is not terra nullius. Never will be regardless of the attempts by corporations.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Your decision on this matter will affect the future. Future - safety, economic stability, and your part in mitigating climate change.

As a future possible parent and grand parent and current young adult. I will be beyond happy to not have cheap gas but to have a liveable future. Where the planet is 3-5°C above average.

Yours sincerely,

B Peck

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a GP & counsellor & well aware of the health & mental health effects of climate change. I am also deeply concerned about the risks of CSG wells to the Great Artesian Basin which is critical to the land & people who live on it.

Mark Carney, governor of the Bank of England advised that companies continuing to invest in fossil fuels will go bankrupt. CSG is economically risky & constitutes environmental vandalism. Disruption or contamination of the Great Artesian Basin would be catastrophic. The Pilliga forest also contains a number of threatened species of national significance.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

It is so important that we begin to work towards bringing down our carbon emissions and doing our bit to reduce the effect of carbon pollution on climate change

While I can not give detailed reasons of a scientific nature for my opposition to Santos ' wish to drill coal seam gas wells in the Pilliga I speak from my heart when I plead for this project not to be given the green light.To me the natural environment is paramount .What natural gas can provide for me is secondary.Now,in this age of Corona Virus evidence of the healing power of nature is being promoted and publicised.We must realise that we are part of the natural world and that it must be respected and worked with if we are to live a healthy and harmonious life.Here in Australia we lead the world in the mammal extinction rate.I am not proud of this.Damaging the Pilliga for commercial gain will do nothing to help this.We have to transition to more earth friendly sources of energy.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its potential impacts on local water resources and the fact that carbon emissions must be reduced on which this has no impact whatsoever.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Christopher Seabrook

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

air we were to Start making Man Made Hydrogen GAS it would be more beneficial to the whole of Australia in more than one day.

Yours Sincerely,

Margaret Bloor.

- And it won't even bring down gas or electricity prices for Australians.

I am deeply disappointed by the short term thinking of the government and their preparedness to compromise the water security and environment.

Extensive local research has been conducted and the vast majority of this region strongly object to the development. I have felt so unheard by all levels of government I have reached out to about this issue and know others feel the same way.

We live in a dry climate and have just lived through an incredible drought. I believe this proposal poses a serious risk to our water and would be a true bastardisation of so much.

Please have the courage to make the right decision and stop coal seam gas extraction.

Yours sincerely,

Susan Michell

Sent: Friday, 7 August 2020 10:45 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a grandparent and I want to be able to look my grandchildren in the eye and say I did what I could to preserve our planet. We must put the long term health of our environment before short term profit from activities that are going to contribute to the destruction of our environment and to global warming.

My key objections to the project are as follows:

1) NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

2) 35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

3) The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. I understand that there have already been at least a dozen spills and incidents from Santos' operations in the Pilliga including a fine for poisoning a local aquifer. The risks to vital groundwater resources from an 850 well gasfield are just too great.

As well...

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

We don't need more gas. We need CLEAN energy - why is it so difficult for you to understand this? My children and yours need a planet to live on with an ecosystem that works. Your gas extraction and subsequent burning are contrary to that imperative.

My main objection is you are adding fuel to the climate crisis. Bringing forward the date of human extinction and most other species too. Climate scientists have been warning you about this for 40 years. My primary objection should come as no surprise. Secondly, you are negatively impacting the local human population which overwhelmingly do not support gas extraction. If the trees could talk, I bet they would say the same!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I implore you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Pilliga is a highly diverse ecosystem that cannot be sustained with 850 coal seam gas wells. The ecology of the Pilliga will be highly compromised further diminishing the biodiversity in the North West Slopes and Plains.

The project would bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This gasfield would add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

The Pilliga is important for Gomeroi people.

Given the rapid growth of renewables and other technological developments it would be folly to proceed with this development which would leave a lasting toxic legacy for our children.

Yours sincerely,

Peter Ackland

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people and for the broader community, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

- government reports, (https://www.aph.gov.au/About_Parliament/Parliamentary_Departments/Parliamentary_Library/pubs/BriefingBook44p/GasDebate) have identified health impacts on communities and environmental consequences that are as yet not fully understood. The absence of clear causal relationships in these instances should not be interpreted as a green light for future CSG development. It is a sign that further research is necessary to understand the effects of CSG. The need for further research and the guiding principles necessary is has been identified by the CSIRO in the report "Human Health Effects of Coal Seam Gas

Activities – A Study Design Framework

Task 4 Report for Health Project (H.1)" dated January 2018 By Melita Keywood,^a Sharon Grant,^b Andrea Waltona, Lesa Aylward,^{b,c} Will Rifkin,^{d,e} Kathy Witt,^{e,f} Anu Kumar,^a and Mike

Williamsa.

- the risk to water resources when considered against other water security issues presenting themselves across the Murray-Darling systems is unacceptable. At a time when our estuaries and dependent ecosystems and industries are stressed by water quality and supply issues due to climate change, it is negligent to risk underwater aquifer and surface water quality through CSG. These resources present a potential the lifeline for existing industry and habitats and must be conserved for that purpose.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest which will impact the Great artesian basin of which much of NW NSW relies on. No water No future!!!

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values. And 850 wells would only be the start, it has been said this will be the start of a roll out of 10,000 wells. Which in the long run will be disastrous to NW NSW and the great artesian basin (our greatest asset)

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- As Santos and other experts have now told you the NGP will not bring down gas or electricity prices for NSW. Although previously this was Santos's big PR selling point. Complete rubbish. Export Export Export!!!!!!!

I have had first hand experience of this projects unconscionable

practices with APA (on behalf of Santos) These included trespass, breaking my business bio security guidelines amongst other actions.

Despite the mining industries wealth, political collusion, amazing PR and lobbying machines, this project doesn't make sense economically, environmentally or culturally. It definitely does not have a social license in NW NSW.

Who is culpable if this project goes ahead? Will it be you commissioners who will have this disastrous legacy to hand down to your children and grandchildren. I will promise you the people of NW NSW will not forget your names.

Yours sincerely,

Fergus Lefebvre

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

This is yet another project where unique species and precious water supplies will be impacted. Greed and a lack of respect and care for life on earth are impacting so many species, eventually including us. This must stop somewhere. As gas is a contributor to global emissions it is particularly prudent to be investing elsewhere.

As waterways, particularly groundwater are impacted by chemicals we will be signing our own death warrant. This is simply silly and not acceptable. Companies and Governments will need to be held to account for decisions made in the full knowledge that there was a probability of contamination of water and land, animal extinctions and loss of heritage values.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission. Rachel Howell

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sent: Friday, 7 August 2020 8:55 AM
To: IPCN Enquiries Mailbox
Subject: Narrabri Gas Project submission

Dear Independent Planning Commission,

I strongly oppose the proposed Narrabri Gas Project.

The local community overwhelmingly opposes the project. Any economic benefits will go primarily to Santos, and once again, everyday Australians will lose irreplaceable natural resources while a large corporation gouges short-term profits.

The project will damage the Pilliga forest - an area of significant environmental importance. The widespread destruction of native forests and endangered species in the past year's bushfires makes the need to conserve these places even more vital.

The risks of coal seam gas extraction are high. High pressure drilling, the chemical pollution of water used in extraction, the dangers of taking water from a system that is already under significant pressure - these are all risks that I find absolutely unacceptable.

Australia does not need more non-renewable energy sources. We have an abundance of alternatives that are renewable and clean.

The evidence on climate change and the loss of biodiversity from our planet is well documented. This project is exactly the wrong thing to be doing at a time when we should be looking after our children's futures - not destroying them.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project because it will have huge, detrimental environmental, heritage, social and economic impacts.

I am a landowner and see at first hand the detrimental impacts of human activity on the tiniest building blocks of life on earth. With intact systems ever scarcer, now more than ever we need to be careful to preserve what we have.

The science is clear. CSG causes extreme harm to the environment, makes people sick, fractures communities as it fractures the rocks.

There are so many other, cleaner ways to make energy today. Let's use smart clean energy - not dirty energy based in the last century.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Fiona McMullin

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As an artist and academic working in the area of ecology and environment I voice my concerns based on very sound evidence. The Pilliga forest needs to be protected for the sake of our environment, wildlife and the surrounding farmland. And the first nations people of the land, the Gamilaraay peoples.

We know that eradication of our natural resources is leading to drought, fire and increased temperatures globally, and very noticeably in Australia. We are also beginning to understand just how much this contributes to the disruption of native species and the increase of zoonotic disease transmission.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Dr Michele Barker

Subject: No! No! Unequivocally, no! The Narrabri Gas Project must not go ahead.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Fossil fuels have had their day. There is absolutely no need for this environmentally destructive project to proceed. The NSW Government must not bow to the pernicious greed of Santos and its shareholders. Instead, hear the expert scientific evidence, and the informed opposition of the Aboriginal people, farmers, local townsfolk and others throughout NSW, Australia and the world, who strenuously oppose this disastrous project on environmental grounds

It's becoming exceedingly tiring trying to explain to greedy, stupid politicians and industry officials why projects such as that proposed for Pilliga should not go ahead. It's simple. The planet just can't take much more. We need a healthy natural environment, healthy farmland and healthy water. The Narrabri CSG project will lead to the destruction of all this and more.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is David Crass and I have worked as a conservation scientist for thirty years .This proposed extraction of gas from this area threatens water security , catchment health and biodiversity.

It also threatens the last secure colony of koalas in NSW.

To allow this project to go ahead is completely reckless and a threat to drinking water quality and supply, the environment, local flora and fauna and sustainable farming practices in this immediate and downstream areas.

This is not hte sustainable development for the future the environment and generations of future australians deserve. If granted approval, the damage from this project will take centuries and million of \$ to repair

It only has to be examined how SANTOS has conducted itself in the Surat basin in Qld to see how they have constantly breached water quality parameters and unauthorised vegetation clearing

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a healer and a grandparent and I care deeply about the legacy we leave behind. In Australia and the earth in general. To irrevocably destroy the earth in this way for short term gain is inconceivable in my opinion.

There have been many studies revealing the complete destruction of ground water from poisons used to source gas. Australia is already dry and ground water is fundamental to survival of flora, fauna, and crops. To wantonly destroy it is a crime and thus should stop right now. There has already been too much destruction of the ground water here.

There are many other sources of sustainable power options, solar being the obvious in our sunny country.

I say NO to the Narrabri Gas Project and support its traditional owners and many thousands of Australians who also object to the wanton destruction of this irreplaceable area.

Thank you for the opportunity to comment. I look forward to hearing from you in the regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission regarding the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a 31 year old living on the Coffs Coast and am particularly worried about the unacceptably dangerous risks and devastating outcomes this project poses to the Australian environment, wildlife, and water systems in NSW. Furthermore, at a time when we should be rapidly transitioning to clean and renewable energy sources, this project's deliverables and total footprint will exacerbate global warming and expedite the disastrous effects of climate change around the world as well as here in Australia which we are beginning to experience more frequently first hand.

I am extremely concerned about the future of our country as well as the future of our children and their environment and this project is short-sighted and a massive step in the wrong direction.

I strongly object to the Narrabri Gas Project. Thanks you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

Also, organisations like Beyond Zero Emissions have fully researched projects that will eliminate the need to increase the fossil fuel carbon footprint the gas will bring to our planet.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a concerned NSW and Australian resident who has just seen the effects of bushfires and climate change on our flora and fauna. I feel that the impairment and destruction on this area will have an immense impact for little benefit and profit to few. As a country we cannot keep ignoring the rich and diverse cultural history of indigenous people if we want to move forward as a united land.

Water is our blue gold and this precious resource should not have any project impacting on its stability given a greenlight.

My children and grandchildren deserve to have a future that is not a country denuded and abused for profit. Especially with renewable energy projects providing alternatives to gas. The NSW government has other gas projects that provide future gas sources and evidence indicates Narrabri is unnecessary.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

It is environmentally destructive to the Pilliga forest - a vast tract of ecologically diverse natural environment; damaging to the rich agricultural land and producers in the area through ground water depletion and salinification of the land; and utter madness at a time when we need to divest completely from fossil fuels and transition rapidly to clean renewable energy.

The proposed gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when we need to reduce emissions by more than 7 million tonnes a year. This is insanity.

Following the severe widespread drought and its effect on Australia's natural and agricultural environments, not to mention drinking water supplies for numerous regional towns, it is irresponsible to support a project which will further impact our water supplies. This is especially relevant to the aquifers and basins below the Pilliga and Narrabri which will be affected if this gas extraction goes ahead - the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

We need every drop of clean water in Australia for an increasingly hot and dry future, and every inch of arable land. We need to preserve our natural environment and reduce our carbon emissions rapidly. A huge gas extraction project is not the way to achieve these goals.

I urge you to reject this destructive and potentially disastrous gas project. Future generations of Australians will thank you for it.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

We need to prioritise and protect our food chain and necessary water aquifers.

The pandemic has revealed just how vulnerable we are as a country should our imports be restricted for any reason and how imperative it is for Australia to prioritise food production over industry in certain areas.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest:

- It will irreparably damage the area's cultural, ecological and hydrological value by industrialising it with 850 coal seam gas wells, roads, power lines and pipelines.
- It will risk the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers by bringing up 1.5GL of water and more than 13,000 tonnes of toxic salts every year.
- This gasfield will add nearly 1 million tonnes per year to Australia's greenhouse gas emissions. when our task is to reduce emissions by more than 7 million tonnes a year.
- And electricity prices for Australians will not be lowered.

Yours sincerely,

Moira Copsey

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

We are literally undermining the future of our children and grandchildren, by risking soil fouling through fracking. Furthermore the environmental impact on fauna in the area has not been adequately addressed. It is time that we understand the interconnectedness between the environment and human beings. We need each other. You damage one, you will damage the other one.

But perhaps most importantly, the whole plan does not make economic sense. There is now an oversupply of gas worldwide. Demand has dropped dramatically. We can tap into gas from other sources in NSW at prices lower than what fracking can produce, without the environmental damage. Just give it up. It is a bad idea.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As a 64 yo father of four and grandfather of two, I am deeply concerned for their future. Projects like this do not benefit the economy or the health of the planet in the long run. The short term gain, balanced against the long term cost, makes the Narrabri Gas Project clearly unsustainable. If you undertake a long term cost/benefit analysis, taking into account environmental, social, economic and heritage values, I have no doubt that - if undertaken with fairdinkum intent - you would reach the same conclusion.

Damage to forests, soil, water supplies and fauna are well documented, and clearly demonstrate that there is no safe way to operate a Project such as the Narrabri Gas Project. We have come a long way in our collective understanding of the connectivity between ecosystems, and the vital, intrinsic value that those systems' health plays in our ongoing human health and economic sustainability. Already many ecosystems have fallen victim to myriad projects based solely on short term gain and profit for the few. The detriment to our collective wellbeing, and that of our World, is very long term, and inordinately costly. There are better ways.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The living culture of the Gamilaraay people is really important—the beautiful rock caves and the connection to Country. Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

The Great Artesian Basin is also the lifeblood of the community and to put that at risk is horrifying.

Thirty-five threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo. It's also home to the koala which is losing it's habitat fast. The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

There is also no adequate plan for disposing of the toxic waste from the project. It is too risky. The community also does not want it. Community surveys show that more than 97% of the community say no to CSG in the Pilliga.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Please consider that it is our duty to look after this planet, so our kids inherit a planet worth living on.

Yours sincerely,

Hanno Krauhs

Sent: Friday, 7 August 2020 9:17 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts. NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity. 35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

EDIT HERE: who you are and why you are making this submission. You might like to explain why the Pilliga forest, surrounding farmland and water is important to you or why risks to our climate are unacceptable due to being a parent or grandparent.

I am a resident of the NSW South Coast and a retired school teacher of many future Australians. I had the privilege to interact with during the 54 years of my career.

As outlined above, I am concerned for the future of this area, I fear all of our environment and as a parent and grandparent, concerned for the future of Australians.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sent: Friday, 7 August 2020 9:20 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Assessment Report states the project would “put downward pressure on gas prices.” However the Institute for Energy Economic and Financial Analysis (IEEFA) states production costs at the Narrabri Gas Project are some of the highest in the country, with estimates to supply major domestic markets as high as \$9-10/GJ. Currently in Australia customers seeking long term contracts are paying between \$9-12/GJ to secure gas, leaving little room for profit generation. The project will clearly be at a globally uncompetitive price for gas.

The Assessment Report states “the project is unlikely to significantly impact any of the identified threatened fauna species, given the relatively small area of habitat removal and the presence of large areas of suitable habitat in the region.” However, the report does not take into account the project has the potential to impact threatened fauna through direct habitat clearance, habitat fragmentation, vehicle strike and predation by pest species. This could disrupt the breeding cycle and adversely affect habitat critical to the survival of these species. There have been no baseline population surveys of the Pilliga Mouse. Thus approving this gas field would likely breach the Environmental Protection and Biodiversity Conservation (EPBC) Act.

The future of the Pilliga Mouse is threatened by this project due to the spread of invasive predator species, and consequent increased rates of predation; the increased fragmentation from access tracks and dispersed clearance potentially creating unfavourable microclimates, open space, and traffic disturbances. The loss of habitat is significant.

The project should not be approved as the Assessment Report fundamentally fails to assure there is adequate knowledge and understanding of the current status of the Pilliga Mouse or all 35 threatened fauna in the project area or of an appropriate management regime.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

While the Assessment Report states the project to be "critical for energy reliability and security" we do not have a gas shortage especially now the NSW Government has approved an increase in the capacity of the Port Kembla Gas Terminal. The modification to the original Development Consent will satisfy the market need for more gas during the cooler winter months.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

To: The Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts. It's another dirty gas project. Time to consider investing in renewable energy. Let's become a world leader.

Whilst jobs are obviously important in the region, more so even now, it is incredibly short sighted to approve the Narrabri Gas Project. The long term damage to the environment, the loss of habitat for vulnerable native flora and fauna is just as critical to consider.

This project is not one that just impacts the local community and environment. This affects all Australians, and as such we have a right to have our objections heard and considered with the same weight as the local Narrabri community.

Our country has been devastated in recent months from horrific bushfires which has decimated our natural, UNIQUE environment. Please, let's stop relying on stop-gap mining projects to prop up regional communities. Regional communities could prosper more so from developing renewable energy investments in their areas.

We have a responsibility to the Traditional owners of this beautiful country to preserve and protect the dwindling native environment.

On top of that, the damage to the subterranean structure of this land, the risk this dirty mining imposes on our critical water resources both above and underground is too much to gamble on.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Sincerely,
Teresa Nuske

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga Forest is an important ecological area. However, the greatest risk is to the Great Artesian Basin - a water source relied upon by many people and industries. Once it is adversely affected a large part of the country will be without this lifesaving source. A little time now on research on where and how it is recharged, how the landforms beneath the surface lay, etc may save the integrity of this critical resource. Politically it is very important. People of all political persuasion are affected by this decision. Time now spent learning more about the Great Artesian Basin may save mistakes and errors in the future.

I could quote research etc but the reality is - sinking gas wells in this area is like lighting a match in a warehouse to see if the dynamite is stored there.

I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Are we mad... the world is going through the biggest environmental, social and economic disaster of this century. We are literally fighting for survival of our species, the natural world and not to mention our wildlife.

We still are destroying forests, wildlife habitats, poisoning water sources in our greed to harvest fossil energy sources. We are blowing up sacred sites as if there is no tomorrow... guess what there will not be one if we keep up this race for profit.

We must focus all our energy on renewable sources of energy. We must empower the rights of Indigenous peoples, the rights of nature, the rights of future generations. In doing so, we actually all may profit, of cleaner water, cleaner air, and a less stressful lifestyle.

I have lived off the grid, off mainstream services for the last 30 years. I am comfortable, warm, have internet and tv and am not deprived of anything. It is possible if there is political will.

Gas is a fossil fuel, it is not clean, it is not renewable, it is not environmentally safe. It favours short term solutions and profit over long term safety and well being of all.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Whatever might be the supposed economic benefits of CSG (and these things are ALWAYS supposed) it is not worth the risk and destruction of so much landscape, native fauna and Flora water supply. It's being against the wishes of Traditional owners should be enough to make the Company back off. FOR EVER.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Edward Theodore

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

It is with much consternation that I send to you stern objection to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

There are words that can be added to excoriate the plain surface of this placid landscape with the monetary benefits that will be gained from such a project, however, at the end of the day, there is the innumerable weight that is laid upon the future of our precious and dwindling natural resources. Not only are there indirect implications and deleterious contributions that this project will contribute to climate change through its end product of combustion by which carbon dioxide is a byproduct, but it will also directly degrade this wilderness and natural environment that is so vital to the health of this ecosystem.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As a concerned citizen and a representative of a local environment group, I recognise that farmland, the natural environment and water is of the upmost importance and MUST be preserved for now and the future.

There are numerous risks with the invasive nature of coal seam gas. These include encroachment on good farming land, disruption of other land uses and industries, clearing of bushland, air pollution, contamination or depletion of ground or surface water, pollution of waterways, health impacts on workers and nearby residents, and damage to biodiversity.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I have been to the area and spoken with many farmers who rely on the clean water resources of the area to grow food for us all.

Coal seam gas production poses unacceptable risks to this resource and our food security.

Gas is a fossil fuel and pollutes the atmosphere.

Australia needs to be a world leader in renewable energy production not CSG which has been proven to be disastrous for farmers and our natural environment.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

My Concerns for the Pilliga are:-

The possible risk to the aquifers of the Great Artesian Basin and the Gunnedah Oxley Basin is too great.

Australia is a very dry country. I believe it is madness to tamper with water resources.

The gasfield would add to greenhouse gas emissions.

Please reject the Narrabri gasfield in the Pilliga Forrest.

Yours sincerely,

Subject: Wake up. Please.

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to the destructive impact it will have on nature. Not only the ecosystems in this particular Bioregion, but also flow-on effects that will continue to contribute to the ongoing collapse of our ecosystems. I don't live anywhere near Narrabri. I care about the state of nature, from the city, would you believe.

This template email that I am using has suggested here that I use the reason of being a parent to explain that these impacts are unacceptable. I'm not a parent. It shouldn't take us having to explain that this is unacceptable only because it will destroy the ecosystem for future generations. What about all of the people and animals who live here now. How could you let this destruction happen, now? Why do we only care about things for our children's sake? What about the sake of the planet, the community, the unique birds and animals that inhabit this area? We have one of the world's highest rates of extinction.

How can you faithfully report on the public feedback that you have received tens of thousands of objections, and still move ahead? How has this project not already been discontinued? The purpose of engagement is to utilise a democratic process to guide decision making. So please report on this properly. There can't be anywhere near as many supporters as there are objectors.

This is a future that you can influence, please do.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. I have friends who have been there. Their photos show the natural beauty of the place. It must be protected not destroyed.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge l'm, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,
Maureen DavisCatterall

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am an ecologist and mother of 3 young adults who have inherited a land in much worse shape than that we grew up in. I have worked in the Pilliga and know that it represents a very significant area of remnant vegetation in an over cleared landscape. I don't believe anything destructive to this environment should be allowed. We have an abundance of alternative clean energy sources which would not cause environmental damage to a precious habitat.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

There is still no adequate plan to safely and responsibly dispose of salt waste from the project which is set to be 117 tonnes or two B-double trucks of salts waste every day, during peak production. The plan to dispose of it in nearby landfill is inadequate as no capacity evaluation of the landfill has been undertaken. Salty waste will leach from landfill and contaminate groundwater, farmlands and ecosystems.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Dear Commissioners,

We can have heavy mining in areas where we produce food and I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies! That is the sad part. Company tax's aren't enough to replace the loss of food production.

Yours sincerely,

Neville Portelli

Subject: I say No to the Narrabri Gas Project

Dear Commissioners,

It is vital for many reasons that you reject Santos' plan to industrialise the Pilliga forest and Narrabri region by developing a gasfield.

I value the biodiversity of the Pilliga forest more than I value a short term damaging gasfield. Fugitive methane emissions will add to the carbon burden in the atmosphere and exacerbate Global Warming. Last summer was hell for all us country people with drought and bushfires. Gas flares in the Pilliga are an unsafe fire risk, and fire fighters should not be put in a deadly position of fire fighting in a gasfield. Other toxic chemicals (BTEX) are emitted from gas wells and compressor stations. The footprint of wells, roads and huge compressor stations and pipelines is vast. The Great Artesian Basin is valuable and should not be endangered. Water is used in gas production, and huge amounts of contaminated waste water is produced. There is no safe way to dispose of it.

I respect and value the traditional owners who care for their country deeply. Rarely are their concerns respected in Australia. They oppose this gasfield.

I feel for farmers and locals who have been bearing the weight of this project for 10 years already, and I fear for their livelihoods and mental health should this project go ahead. There is no social licence.

Do not ignore the wishes of everyone who has taken time to submit written and spoken submissions.

I know more than I ever wanted to about the gas industry from first hand experience and research. I lived through the gas invasion of the Northern Rivers. An exploration well was drilled next to my property, and several within 10 km. it was a stressful time. Our lives were totally disrupted.

We visited Queensland and saw for ourselves the dreadful impact on the people and the landscape. Water wells became depleted. The Condamine River bubbled with methane escaping underground from land disturbed by gas wells.

In our region the gas company Metgasco, spruiked jobs for Aboriginal people that never eventuated. In Queensland, locals were not employed, FIFO workers built the gasfield infrastructure. Local people left the towns as they could not afford to live there as the rents rose to accommodate workers. Other locals invested in building accommodation, only to find it empty once the initial building phase ended. There is very little long term employment in the gas industry, and it is not for locals anyway.

Please reject the development of the Pilliga gasfield. it will not bring benefit, only serious negative impacts

-
Yours sincerely,

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a scientist and a father concerned about the future of our young generations and the planet they will live in. I do not see it is not in the public interest of Australians to continue pursuing extraction of fossil fuels, such as gas, at the expense of unique natural habitats for Australian wildlife, prime farmland and water resources. Australia as a country is one of the world highest sources of emissions when we count our fossil fuel exports – a prime objective of gas extraction proposals.

With the vast renewable sources of energy Australia is blessed with, there is not even economic justification for mining more coal, oil and gas at the rate it has been done. There are now obvious high risks associated with further investment in fossil fuel based projects due to their emissions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

To risk any adverse effects on the water table, the fauna and flora, especially in the Piliga, for a resource which has no future beyond perhaps a few years is just mindless. We all know that renewables will make fossil fuels obsolete, despite the best efforts of government and the fossil fuel industry and revenue raising States.

Our children will look back and hate us for it. The plain stupidity of it, for nothing but short term gain, is logic defying. We just don't need to do this.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

The Pilliga forest and surrounding farmland and water resources are important to Australia's delicate climate which is warming like much of the world. We do not need any more fossil fuels that risks our climate. I understand since European invasion we have decimated the natural vegetation cover in Australia by some 50%. This plan for some 850 coal seam gas wells being drilled through to the artesian basin will irreversibly damage farm and household water supplies. It also risks the water table which could/will pollute the land. It is unacceptable to further damage our natural environment.

Also I understand the natural gas project is objected to by the local communities and the First Nation owners. RESPECT local rights!

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Having 3 kids growing up in this region, the Pilliga forest, surrounding farmland and water is important to us and we can't understand why we are placing risks to our climate - it is unacceptable due to being a parent or anyone who looks for a sustainable future.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I strongly object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a resident of Sydney who spent his childhood in Central West NSW. I am very concerned that this project is both unnecessary from a resources point of view and poses totally unacceptable risks from an environmental, cultural and food security point of view. It is beyond time that we stopped investing in wasteful, unnecessary short term projects that are harmful to our lives and environment, and instead started to focus on the long term, and the security and well being of our children and grandchildren. This proposal for the Pilliga is emblematic of the problem - an unnecessary, short term project that poses unacceptable long term risks to water security, food security, the natural environment and local culture. Among key reasons why the project should not be approved are:

1. The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.
2. Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.
3. NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access gas at cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

4. The Assessment Report states the project would “put downward pressure on gas prices.” However the Institute for Energy Economic and Financial Analysis (IEEFA) states production costs at the Narrabri Gas Project are some of the highest in the country, with estimates to supply major domestic markets as high as \$9-10/GJ. Currently in Australia customers seeking long term contracts are paying between \$9-12/GJ to secure gas, leaving little room for profit generation. The project will clearly be at a globally uncompetitive price for gas.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

As a mother and teacher I would like the next generation to live with hope for a future with a healthy environment. The Pilliga forest is essential to the Gamilaraay people who are custodians of the land. It also supports flora and fauna of which we cannot afford to lose more of. And most importantly the Artesian Basin should never be put at risk through pollutive practices designed to bring profits for select community groups.

The projects appears to be short sighted with little gain for the larger community. It has the potential to devastatingly impact on the Gamilaraay people who have not given their consent for this to occur on their land. Haven't we progressed further than this as a nation ? Also the flora and fauna If which we have lost so much after the devastating bushfires. And the Artesian Basin and surrounding farm lands will be adversely impacted on. It is unacceptable to have waste accumulation such as massive amounts of salt byproducts, with no plan for what to do with it. Australia can not afford to damage our precious environment and more. Repeats of the 2020 bushfires are not something we can endure as a nation. Amongst other things it will impact on tourism and our economy.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I have been a taxpayer for most of my life and I want an environment that my daughter can enjoy.

During the last 2 years there have been newspaper articles that discuss how damage caused by coal seam gas extraction is repaired. Pouring concrete down a hole is not a satisfactory solution. The newspaper articles often contain offers of compensation if our underground water is polluted. Once the damage is done, no amount of money can compensate for loss of our water.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest for a number of very important reasons.

Firstly because the people who live in Gomerai rely on it for water resources to grow their valuable crops which feed many people.

Secondly, the conservation value of the land is priceless, there is a diverse wealth of flora and fauna which will be seriously damaged by this proposed development. There is also the cultural history of the area to conserve for future generation.

Thirdly the dangers posed by water waste and degradation are enough in themselves to reject this proposal. Anyone with commonsense can see this is a long-term environmental risk.

Last but not least is the fact that our planet needs less fossil fuels not more because climate change is not going away until change is made. I am ashamed that my nation is not leading the way in sustainable development instead further damaging the eco-sphere.

Please act responsibly with respect for our mutual future.

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

K-M Burton

Menzies, Queensland, 4825, Australia

Dear Commissioners,

Please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The risk of permanent damage to the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers by the gasfields would have devastating effects on large areas of Australia.

The Gomeroi people have a special connection with this land and do not want it decimated by CSG mining.

Yours sincerely,

stop land clearing and urban sprawl: Better City Planning

High density cities (with affordable housing) are faster (spread out suburbs are inefficient and get people addicted to cars) and cost benefit ratios for bicycle paths show increase in society health and increase in business/shops near them. Currently half of the vegetables we in NSW eat are from city fringe farms that are due to be overrun by urban sprawl. Train transport through the bush linking up higher density cities. Stop urban sprawl causing social isolation and wasted travel time and contributing to housing being unaffordable. Curtin uni has done a study that shows the infrastructure (road, water, sewage, phone/NBN, electricity etc) costs for a new suburb are \$684,000 per dwelling (Curtin_Sustainability_Paper_0209). Why waste this money to build a house that makes people unhappy driving 2 hours to work and unhealthy because they have no time for exercise. More mixed social housing (and making it compulsory for 30% of apartments in each sky scaper is needed fo

r basic human right to have a home. Bust the transport myths that 99% of people are confused about:

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I was there when we lost the Leard State Forest to Whitehaven. Our objections, protests and camp for the bockade did not prevent the loss of all trees, other flora and the fauna.

There was also the loss of over40 Burial Trees. Think of it as someone tearing out your Mother's or Child's grave and breaking it all up.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

TeeKay

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Australia is in a fantastic unique position where it could be a world leader when it comes to renewable energy,

Redflow battery systems, Clearvue Technology's glass solar coating are just a couple off examples.

This gas will mostly be sold off overseas. There is no need to ruin this country and to hand over our resources to foreign countries.

Yours sincerely,

Jens Roestel

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Who are you dear Commissioners and who do you serve, the people who live and work in the Pilbara or a mining company?

Every day people are desperately fighting for their families, homes, livelihoods against what? A company seeking to profit and in the process destroying people's lives and the environment. It has to stop, you need to support the people not the mining companies as alternatives can be found and used.

Every day I see our government supports profits and mining above all other considerations saying it's for our benefit. This is not true, there are better more balanced ways to live.

When I was little I thought I'd grow up into a better world, very sadly this is not the case due to greed and a worship of money.

Our environment gives us life, we must respect it, without it we won't survive. This is taught every day in schools.

I hope you are listening, it means everything to some people and only money to others.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Subject: Submission: I sincerely object to the Narrabri gas project proceeding at al

Dear Commissioners,

I sincerely & respectfully request the Commission reject the proposed Narrabri gasfield in the Pilliga forest, no matter whether it be by Santos or any other entity.

1. The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
2. Creating an industrial area in the Pilliga with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its natural beauty, cultural, ecological and hydrological values.
3. I understand it shall bring up 1.5GL of water as well as more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
4. This gasfield likely will add nearly one [1] million tonnes every year to Australia's greenhouse gas emissions when the Australian community's task is to actually reduce emissions by more than seven [7] million tonnes a year.
5. And it won't even bring down gas or electricity prices for Aussies!
6. Finally, its operation is adverse to the production of food for Australians. We can go without coal gas, but not good quality food. Just look at what the pandemic is doing to the way the community has to change the way we rely on our own natural resources. By natural, I mean, clean air, food and water.

Yours faithfully,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Gas wells are known to contaminate ground water and ar3 a high bushfire risk. Both of these dangers are particularly important in Australia's dry conditions.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Claudia Koller

Dear fellow human

I am sad at having to lodge this submission on the Narrabri Gas Project. People more skilled than I have put the overwhelming information together as to why this and similar projects should be denied. I despair that there is insufficient integrity left to prevent yet another natural disaster with a legacy of ruin for decades or perhaps centuries after the profit takers have moved on. Greed is not good- it's killing the country. It's no consolation to know I will not be part of the generations who have to live with the consequences to of decisions favouring the self serving few who will "profit" from this project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project.

Yours Sincerely,

Doug Calder

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Attention please.

We must reject this proposal.

The pilliga is so important for theGomerioi people, their biodiversity, and of course water resources.

With the proposed 850 wells and all that is necessary to go with it, will cause irripairable damage

My concern also is for the Artesian basin, and local aquifers, and the waste toxic salts

Our climate is at a very critical point of irriversable damage and this will add more emmissions of green house gas....

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

.....I simply do not believe this will bring our gas and electricity prices down..!!

Sent: Thursday, 6 August 2020 8:38 AM
To: IPCN Enquiries Mailbox
Subject: Submission opposing the Narrabri/Pilliga Forest gas project

Dear Commissioners,

I strongly urge you to reject the Santos proposal to create a new Narrabri gasfield in the Pilliga forest.

My reasons for objecting to this proposal are as follows:

1. The Pilliga is uniquely important for Gomeroi people, for biodiversity and for the region's precious and already threatened water resources, all of which are 100% irreplaceable.
2. Industrialising the region with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural heritage and its ecological and hydrological assets.
3. Any new Narrabri gasfield will flood the existing aquifer with 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and other local aquifers.
4. Any new gasfield will add nearly 1 million tonnes per year to Australia's current greenhouse gas emissions when the Government's alleged aim is to reduce greenhouse gas emissions by more than 7 million tonnes a year.
5. Finally, the creation of a new Narrabri gasfield will not reduce the prices of gas or electricity for the people of Australia, with the majority of the gas it produces being sent overseas to aid other polluting economies.

Again, I urge you to reject this redundant, polluting and ecologically disastrous project for the benefit of the greater Narrabri region. It is in your hands to set a precedent which will help to end these environmentally catastrophic practices and ensure clean energy becomes the Government's number one priority as it most definitely should be. Please bear in mind that the decisions you make today will affect the NSW water table, the land that sits above it and the people who live and grow food on it for generations to come. Please don't mortgage their future so Santos can post record profits yet again.

Thank you for allowing me to express my views and share my very grave concerns with you.

Sent: Thursday, 6 August 2020 8:39 AM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Stella Flick and I am writing this submission as I believe we as Australians, citizens and government, need to step up to stop further impacts to our environment. The Pilliga forest, surrounding farmland and water is important to me as it is apart of our beautiful natural landscape. As a young Australian moves that detrimentally impact climate change scare me as I wish to have a family of my own in the future and it's unacceptable to think I won't be able to have that same opportunity.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires.

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project.

Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Water, Water, Water. It must be protected.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Please protect our farmland, without Water, we will not be able to hand over the farm to our 6th generation.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Debbie Ibbott

Subject: Objection to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Kfir Pronkhorst

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As a previous resident NSW I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. Please take into consideration the local people and community when making your decision. It will affect the area, these people and their communities for generations and any actions need to take this into account.

Fossil fuels are not the future. There may be short term benefits, but the future impacts do not justify it.

Our country should be leading the way for developing technologies that minimise our impact and benefit our society. Not clinging to destructing energy technologies that will have enormous impacts for our future generations.

As a youngish Australian, I urge you to think of the future and make a considered decision

Yours sincerely,

Tristan Brega

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!

The land of our first nations' peoples is infinitely more valuable to the future generations than short-term profits to Santos from coal seam gas.

Besides decimating natural flora and fauna and scarring the landscape, these well-heads will leak fugitive emissions and trample over the health and well-being of the community. This project must not be allowed to proceed.

Yours sincerely,
Rodney Duncan

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources. It is also an extremely beautiful area with all of the advantages that natural forest bring to our country.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers, and to date we have not heard any reports of how Santos proposes to dispose of this salt.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- The gas will almost certainly be sold to overseas buyers at the highest price obtainable, and will not increase supplies to Australian consumers.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Warwick Mosman

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Shale & coal seam gas has been mined unconventionally for over 50 years. The process has caused irreversible damage to artesian water, air and soil WHEREVER it has been attempted. It ALWAYS means \$\$ Billions for industry, disaster for communities.

Qld gas towns are the most recent to be blitzed.

Annual records provided by Queensland University demonstrate beyond any doubt that rural communities are trashed by CSG mining.

This is not theoretical; it is 100% guaranteed to occur.

Communities are to be sacrificed for the \$\$ Billions of a few, and their political enablers.

CSG is a rort.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Santos' proposed Narrabri gasfield in the Pilliga forest is of utmost significance to the future sustainability of Australia. With little forethought, our Artesian waters are being both withdrawn and polluted for the sake of private profit and to build climate-endangering projects like this one.

Our water resources are already seriously endangered. We know that future human migration will be about water, future wars will be fought over its rarity.

The future of agriculture is at stake. Scientists warn, and governments ignore. I implore you, please consider my grandchildren as well as our true economic future in the decisions that you make.

This would bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This gasfield would add nearly 1 MILLION TONNES every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Our family are solely dependent on the Artesian Basin Water, our home and our animals use this amazing resource daily and we both appreciate and respect that without it and without us all caring for it we can no longer survive on our farms. Our families provide food security for our country and we don't want to be anywhere else, this is what we love and we do not want to be forced off our farms and out of our communities by risking it with coal seam gas.

We have 3 children and they all want to return to the land, I plead with you to not risk their future dreams and goals.

Help us to keep our homes and in turn you help us in our daily goal of keeping our country a great and secure place to live.

I also provide the following as I believe them very important reasons to reject the Narrabri gasfield.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I endorse the comments from the Lock the Gate alliance

I am concerned about the impact on groundwater - there has already been damage to aquifers. People around Narrabri rely on this water to produce out food

With global warming teh last thing we need is more greenhouse gas escaping from wells, and more CO2 produced by burning gas

This development is just not appropriate

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

This land is used to grow our food, an essential part of life, and relies on the groundwater to enable this to happen. In fact, the community needs this water for everything as there is no alternative reliable water supply available. The project Santos is proposing will use massive amounts of water and produces tonnes of toxic salts every year, which risks the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. There have already been at least a dozen spills and incidents from Santos' operations in the Pilliga and they have even poisoned a local aquifer. The risks to vital groundwater resources from an 850 well gasfield are just too great.

Additionally, the 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage the area's cultural, ecological and hydrological values. The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year and it won't even bring down gas or electricity prices for Aussies!

Say NO to the Narrabri gas project.

Yours sincerely,

Carolyn Sharp

Sent: Thursday, 6 August 2020 10:28 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

The Santos' proposed Narrabri gasfield in the Pilliga forest must be rejected for at least two reasons.

One:

There is no need for more gas on the Eastern seaboard: the supply and prices are controlled by the gas industry in such a way as to create the impression that there is a need. The idea of this is to make sure they can continue their industry into the future at a time when alternative, climate-friendly sources are available that will exclude them from the market. While I can understand their desire to stay in business, I don't think that should allow them to damage the environment even further. We all need to change the way we do things. Let them look at the motor car industry embracing new technology.

Two:

There is no reliable science in relation to fracking it is all guesswork hit and miss and nobody knows the long term effects of interfering with the groundwater - in the US people have had methane coming out of their taps. Furthermore, it wastes a lot of water and the Pilliga needs all the water it can get its roots into. We have friends on a property at Gwabegar: as little as fifteen years ago, they had a bore near the house that supplied their needs (no irrigation). It was four metres from the surface; now, they have had to put in another bore which reached water at eighty (yes, 80) metres. And this without Santos! How many tree in the Pilliga Forest can put their roots down beyond 80 metres?

In summary, this project is unnecessary and an environmental disaster. Please don't let it go ahead.

Sent: Thursday, 6 August 2020 10:43 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

When I first heard of the proposed Narrabri gasfield, I was angry that the groundwater on which so many farming families depend, should be put at risk. Anger gradually gave way to sadness as some wider implications of the scheme became apparent.

Most of the submissions you read will focus on the importance of maintaining a reliable, unpolluted source of groundwater and the important issue of greenhouse gas emissions. I share those serious concerns, but my submission hinges around the environmental value of the Pilliga and the scenic resources of the surrounding area, which are inextricably bound to the economic and spiritual health of 'locals' and visitors alike. The Warrumbungles, the Macquarie Marshes and Mount Kaputar National Park are internationally recognised for their unique qualities. The likely detrimental effect on the Macquarie Marshes from polluting the water table are obvious, but the visual pollution of the Pilliga will inevitably affect tourism to the whole area.

The views from Mount Kaputar National Park are spectacular, and tourists visiting the park add substantially to the local economy, as do the visitors to the Warrumbungles. Anyone who has marvelled at the view looking south-west from Kaputar on a hot, still summer day, will understand. The Pilliga, shimmering through the heat haze, becomes a vast blue-green sea, and the Warrumbungles, more than 170 kilometres away, defy the curvature of the earth and appear as distant islands.

The idea of the Pilliga dotted with coal seam gas wells and crisscrossed by access tracks and pipelines is anathema to anyone who values the area for its scenic beauty and biodiversity.

Please reject Santos' proposed Narrabri gasfield.

From: Dominic Case <campaigns@good.do>
Sent: Thursday, 6 August 2020 10:51 AM
To: IPCN Enquiries Mailbox
Subject: Submission: Please reject the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

This proposal can be dismissed very simply. There is one overriding reason why the Narrabri Gas Project should not go ahead that its proponents cannot deny. The gas so extracted, when burnt, will increase Australia's greenhouse gas emissions to an unacceptable level.

No amount of minimisation of the impact of the mine alter that fact in any way whatsoever.

You will have read many arguments against the proposed gasfield. They highlight the alienation of the landscape by gas wells, pipelines, roads and power lines. They quantify the risk to the Great Artesian Basin, both in the consumption of water and the risk of pollution of local aquifers. They stress the impact on the local indigenous people and their culture, which is so much connected to the land.

Proponents of the gasfield argue that all of these concerns will be addressed, that the impact on the landscape will be minimal, that the water extracted with the gas is different from the water used by local farmers, that farmers will share in the profitability of the gasfield, that local Gomerioi people are being consulted, the project will bring economic benefits to the area and so on.

These arguments are all quite irrelevant. Put very simply, Australia - and the world - cannot afford to continue extracting and burning fossil fuels. Our greenhouse gas emissions are much too high and must be reduced dramatically to avoid the damaging effects of climate change. However much the objections to this mine are addressed, that fact remains unchanged.

Moreover, the argument that the project will bring economic benefits to the area is immoral. There are many activities that are beneficial to those who undertake them but not for the general good.

In fact, no benefits will come from this project. It is argued that it will supply half the state's gas needs. We have no gas shortage. And if there is a need to develop more energy resources, then renewable energy has been shown to be considerably less expensive.

Please reject this awful proposal.

Yours sincerely,

From: David Mackay <campaigns@good.do>
Sent: Thursday, 6 August 2020 10:56 AM
To: IPCN Enquiries Mailbox
Subject: Submission: Reject the Narrabri gas project

Dear Commissioners,

Santos' proposed Narrabri gasfield in the Pilliga forest will be an ecological disaster on several levels

Water table damage from fracking will impact animals, plants & trees, and the traditional owners.

Construction of infrastructure will impact heavily on the Pilliga's flora and fauna.

The chemical and salt contamination will damage the areas around the wells. One only need look at the damage in Queensland gas fields for examples of contamination which will eventually end up being cleaned up by tax payers, if ever.

850 coal seam gas wells and accompanying infrastructure will ruin this important forest and adversely impact its wildlife.

Damage to the aquifers will be permanent, risking water supply to agriculture. These artesian resources are unique and irreplaceable. They should not be sacrificed for short term economic gain, exploiting a resource which is no longer appropriate in the era of climate disruption.

Such developments, along with the proposed Northern Territory gas projects, will add a significant fraction of our existing emissions on top again. This in a time when we are clearly failing spectacularly to meet our Paris emission reduction targets, which are soon to become more ambitious. It is utterly irresponsible to embark on such projects when the consequences are so high and impactful over a wide area.

Fugitive emissions from the well heads are never accounted for and will only exacerbate the run away climate disruption underway due to burning a resource unnecessarily due to the technological advances made since we started burning them at the beginning of the industrial revolution. Renewables will provide us with another energy revolution. Gas is for the past, and the "cynically deceitful positioning of it as a "transition fuel" is to be rejected outright.

The Pilliga should be preserved for all Australians, not exploited for the shareholders of a fossil fuel company.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
- And it won't even bring down gas or electricity prices for Aussies!
- This is all so ridiculous, can we please try thinking of ways to stimulate the economy that DON'T have negative cultural and environmental impacts

Yours sincerely,
Liz Tomkins

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

My name is Don Wilson I turn ninety next month. I have lived a happy & prosperous life in this great country. Unfortunately I do not believe that my grandchildren & great grandchildren will enjoy the same advantages. I am concerned at the short term thinking of governments in their attitudes to decisions that trash the environments. It is obvious that the world will move toward clean energy in the next few decades. Gas is not clean energy, nor is it as cheap as solar & wind, backed up by batteries & hydro.

About 3% of methane escape into the atmosphere & overseas experience has shown that fracking devastates water supplies.

EDIT HERE: your key objections to the project. Use personal observations, scientific studies, any evidence or information that you think would be beneficial in supporting your submission to be convincing. See suggestions.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Don Wilson

This email was sent by Don Wilson via Do Gooder, a website that allows people to contact you regarding issues they consider important. Sent: Thursday, 6 August 2020 11:28 AM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I am a fifth generation farmer in the Narrabri Shire and I strongly oppose the Narrabri gasfield for the following reasons:

As a landowner and farmer in the Narrabri Shire I am concerned with the impact on the Southern Recharge of the Great Artesian Basin, the Gunnedah Oxley Basin and the overlying alluvial aquifers. I am concerned about the potential contamination via the accidental release of chemicals used in the drilling and extraction process as well as the cross contamination from naturally occurring toxins within the coal seam water.

As a landholder and farmer in the Narrabri Shire, I am highly concerned about the insurance implications of this industry for directly or closely impacted landholders. The Chief Scientist has looked into this issue in detail and did find serious gaps. The Chief Scientist has recommended that the Government consider a robust and comprehensive policy of appropriate insurance and environmental risk coverage of the CSG industry to ensure financial protection short and long term.

These are just a few of the still too many unaddressed uncertainties, in relation to both the Narrabri Gas Project and CSG in NSW in general. A lack of attention to this detail has further added to community angst and opposition to projects like this, only the few who will financially benefit from the gas project are naively supporting it.

The majority of the Narrabri Shire and neighbouring shires such as Coonamble, Walgett and Moree Shires do not support coal seam gas so it's time to stop this insanely stupid mistake being made that will destroy this area for the next generation, including my three children.

Yours sincerely,

Mrs Keiran Knight

We fought the introduction of CSG in the Northern Rivers a few years ago and over 90% said a resounding "No". We are a gas free region.

And so it must be for the Pilliga also - all regions are important for their individual cultural and biodiversity values .

Sent: Thursday, 6 August 2020 12:10 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Coal Seam Gas and other forms of fossil fuels, whilst they are, at the moment, relatively abundant, are not renewable, and are therefore not reliable. In the face of the current Covid -19 problem and its effect on global oil prices, if we view fossil fuels from a purely economic standpoint, they are scarcely viable.

Investor advocacy group the Australasian Centre for Corporate Responsibility said that the write-downs which have recently occurred amongst major players in the CSG industry are some of the clearest indications that fossil fuel assets are starting to become stranded.

The recent writedowns "by Santos – on the back of Royal Dutch Shell, Woodside and Origin writedowns – is a clear demonstration that oil and gas assets are being stranded right now," ACCR director for climate and environment Dan Gocher said.

"Santos is prepared to sacrifice the climate and local communities on the slim chance that the Narrabri gas field may be profitable in the hope that business conditions improve. These gas assets will eventually be stranded. Santos must see the writing on the wall and abandon the Narrabri project before burning any more shareholder capital."

This is entirely fair comment, given the current situation, and our uncertainty about its duration, which could be many years. "In the hope that business conditions will improve" is absolutely no basis whatsoever for placing at serious risk the following:

- 1.) The cultural, ecological and hydrological values of the area planned to be exploited.
- 2.) The Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers, by bringing to the surface 1.5GL of water and more than 13,000 tonnes of toxic salts every year.
- 3.) Our already overloaded and overheated atmosphere, in that burning this gas will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

The effect on gas or electricity prices for consumers in Eastern Australia is likely to be negligible.

Before you say yes to a project which may well be doomed before it starts, please visit the area and see what stands to suffer most - the environment and the people. Let these come before cash!

Subject: Submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

Sandra Lee,
2449

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am a resident in the town of Coonamble, a town that is totally reliant on bore water and surrounded by grazing land of which most is totally reliant of the water from the Great Artesian Basin.

Any disruption or damage to the aquifers that feed the basin would be catastrophic to the town of Coonamble and the Landholders of this district.

Surely some common sense must prevail and stop this project where it is now and to put some confidence back in the people who help feed this nation and the rest of the world.

NO MORE FRACKING

Yours sincerely,
PHILIP SKUTHORP

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

- And the environmental damage caused by a project are too much for our and future generations to risk.

Yours sincerely,

Phil Reid

Newport, New South Wales, 2106, Australia

Sent: Thursday, 6 August 2020 12:18 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am resident of New South Wales. I grew up in the farmland of northern NSW. I have camped with my children in the wilderness around the Warrambungles. I love the wild beauty of the north west, I admire those who work the land to provide food for this country and others. I am appalled at the mismanagement of water and other natural resources that is putting not only agriculture at risk, but even the very existence of townships due to lack of water.

The risks of the Narrabri gas project are too great. Immediate threat to farmland, to wilderness, and to water quality and quantity. These are things that CANNOT be remediated. I have a chemical engineering degree - I know that polluted water is orders of magnitude harder to clean up (often impossible) than it is to prevent. The risk to the Great Artesian Basin is utterly unacceptable. The scale of impact to a pollution event is unthinkable. This simply cannot be gambled with.

The longer term risks of the project include the unacceptable continual rising of carbon emissions, keeping Australia and the world on track to a rise by 3 degrees or more above pre-industrial levels. This kind of climate will make western NSW virtually uninhabitable, let alone no longer viable for food growing. How can NSW take such a risk?

And finally the immediate threat to the sacred country of the traditional owners, the Kamilaroi people is unacceptable. It is no longer acceptable to desecrate and destroy their lands and their sacred sites for dirty fuels. We have alternatives. Australia can decarbonise and move away from gas. It is not necessary to expand gas operations, especially at the expense of yet more precious Country.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Serena Joyner

Subject: Submission: I object to the Narrabri gas project

To whom it may concern,

I write in response to the proposed Santos' Narrabri gasfield in the Pilliga forest. I would like to encourage you to reject the mine for many reasons. For instance<

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.
 - Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
 - It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
 - This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.
 - And it won't even bring down gas or electricity prices for Aussies!
- This mine isn't adding value to our country or community and I urge you not to support it.

Yours sincerely,
Diana Pettersen

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

the state of the CSG industry in SE Queensland is in tatters from all angles. Financially, socially and environmentally. It has left rural towns in disarray, depleted water bores that were critical to existing businesses, and is fast becoming a massive stranded asset!

There are no good reasons to be fracking any more wells in NSW!

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Sent: Thursday, 6 August 2020 1:14 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The proposed development is contrary to the fundamental objectives of the Environmental Planning and Assessment Act, 1979. It DOES NOT:

- (a) promote a better environment by the proper management, development and conservation of the Pilliga forest;
- (b) facilitate ESD due to long term and irreplaceable damage on groundwater;
- (c) protect the environment including conservation of threatened flora and fauna species;
- (d) promote sustainable management of Aboriginal cultural heritage;
- (e) Protect health and safety of residents in the vicinity of the gas field.

- The Pilliga is uniquely and intrinsically important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

You must consider the precautionary principle, intergenerational equity and conservation of biodiversity and ecological equity.

Please don't destroy one of Australia's most productive and viable food basins.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Only limited surveys were done for the assessment of the gasfield, but these found 10 threatened plants and 35 threatened animals in the gasfield area, including pygmy possums, koalas and the Pilliga mouse.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- Treatment of water brought up from underground will produce up to 840,000 tonnes of solid salt waste, laced with heavy metals, which will need to be disposed of.

- The National Industrial Chemicals Notification and Assessment Scheme (NICNAS) conducted a National assessment of chemicals associated with coal seam gas extraction in Australia and found that 48 of 113 chemicals used in coal seam gas operations could harm the health of workers in the CSG industry that come into contact with harmful quantities of them in mixing or blending chemicals to produce formulations, or in the event of an industrial accident.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Toni Bentley

- And it won't even bring down gas or electricity prices for Aussies!

Once we have ruined the environment, there is little or nothing that we can do to restore it.

Furthermore, people are being encouraged to use energy providers who produce using sustainable resources, thus reducing the market which Santos hopes to address. It would be more than tragic if Santos went ahead with this project, only to find that before long its customer base was so reduced as to make this project uneconomic - but by that time it would be too late. We must act BEFORE doing irreparable damage.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Although I live in WA, not NSW, I want you to save the Pilliga forest and not approve Santos' bid for a coal seam gas field at Narrabri.

I cannot understand why hundreds of wells could be seen as beneficial to the environment with its heavy water use and bringing toxic materials closer to the surface.

The gas will only serve to add to Australia's greenhouse gas emissions at a time when we are meant to be reducing them.

Furthermore, gas is not cheap energy and will do nothing to lower electricity prices.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. Santos does not have a good history/track record of operation and their determination to go ahead with this venture at any cost - shows this to be no different than this proposed venture.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. Santos's destruction of this

important area - not only culturally but also for the livelihood of so many farmers amounts to sheer ecological bastardy.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values. The artesian water is not theirs for the taking. Governments should know and realise this before approving any such works.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. Once the aquifers which the people rely on are damaged beyond recovery/repair, it gives a deadly prospect to the land, people and animals of which the Government and the coal seam miners should have to pay compensation for.....

- This gas field will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. This in no way shows a responsible Government prepared to act to control Climate Change. They must stop this proposal from going ahead - now and forever - as the alternative for this forest, the people and the climate just cannot survive in this environment.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Ani Hart

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

The current pandemic makes us all aware of the vital importance of a healthy clean environment.

The proposed Narrabri coal seam gasfield at Pilliga that Santos is proposing will be detrimental to not only the environment we see, breathe and farm, but contaminate and deplete precious and vulnerable water resources in aquifers and potentially, the Great Artesian Basin.

It would be seen as clever, forward thinking on the part of the NSW Government if it ended its support for mining gasfields and instead championed a future where energy is derived from sustainable sources, and farmers' livelihoods were safe from this damaging activity.

Please do not use the Pilliga forest as a gas seam resource to be exploited.

Yours sincerely,

From: Leonarda Kovacic <campaigns@good.do>
Sent: Thursday, 6 August 2020 1:58 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I was among the 98% people who previously made objections to the Environmental Impact Statement for this project. From 1999 to 2008 I did doctoral and post-doctoral fieldwork in this area. I worked with the local Aboriginal Elders who stood up for the preservation of their land and their culture, as I recorded their invaluable heritage and places of cultural significance. As none of these Elders are alive today, I raise my voice against this project to which they would have strongly objected.

I continue to strongly object to the proposal to have a large section of New South Wales turned into an uninhabitable, chemically polluted and hazardous desert from the current environmentally and culturally significant region with unique and endangered flora and fauna, including at least 10 threatened plants and 35 threatened animals, such as the pygmy possum, koala and Pilliga mouse. This project does not mean the destruction of only the Pilliga forest area, but both its immediate scope and future outreach would affect most of south-east Australia due to its impact on the Great Artesian Basin, the only source of reliable water on this arid continent. Sadly, Australia already has the poorest track record in the world when it comes to deforestation.

The proposal by Santos to remove 37.5 billion litres of water (the most precious commodity in a country like Australia) over 20 years from deep below the Pilliga is a madness that should not even be considered. Additionally, the treatment of this water would result in 840,000 tonnes of solid salt, laced with heavy metals, for which Santos still has no disposal plan. Would that toxic waste then be transported and dumped in other areas of New South Wales or Queensland, so that the environmental impact can be compounded and multiplied? Further, Santos anticipates leakage from the precious alluvium that lies above the coal seams despite claiming there is no linkage between the water sources. Not outlining, detailing, and resolving such crucial aspects of a project clearly spells out the paradigm under which all multinationals operate: use what you can where you can while you can, and then move on to another resource area without any conscience or concern for the long-term consequences you leave behind. The construction of a major required pipeline would wreak additional havoc on the areas through which it would run.

The project spells a disaster in terms of Australia's commitment to reduce greenhouse emissions under the Paris Climate Agreement. Total greenhouse gas emissions produced by the project could be 127.8 million tonnes of carbon dioxide equivalent, or 5 million tonnes a year. This one gas field would increase Australia's greenhouse gas emissions by nearly 1% per year. Also, mobilising methane in coal seams could lock in ongoing fugitive emissions of this greenhouse gas for decades to come. One only needs to look at the devastation that coal seam gas extraction caused in Texas, USA, to be against this project. I have a colleague who lives in Texas and he reports extreme environmental damage and pollution, to the point where there is no clean drinking water available and residents have to buy bottled water for their everyday use which adds significantly to their annual expenditure, inconveniences them in their daily lives, and creates huge amounts of plastic waste. There has also been an exponential increase in cancer and other medical conditions as the direct outcome of coal seam gas chemical extraction pollution. People have been moving out of the affected areas, turning whole towns into ghost towns. Coal seam gas extraction affects people's health as well as the socio-demographics of the area.

Santos' proposition to undertake detailed surveys of Aboriginal culturally significant sites after it gets approval is laughable. Santos' Aboriginal cultural heritage assessment to date identified 90 known Aboriginal cultural heritage sites in the project area, including rock shelters, burials, historic camps, and hearths. I am certain that this list is not exhaustive and final, as there are many sites that Aboriginal people do not wish to disclose to outsiders and that they themselves may not know about due to the fragmentation of Aboriginal cultures and inter-generational trauma caused by colonisation. Any further disrespect to the traditional custodians by refusing to listen to their concerns

and ruthlessly exploiting their land is a form of neo-colonialism which appears to be yet another unconscionable and unethical practice in which multinational companies specialise, as the recent Rio Tinto blast of a 40,000-year-old site in the Juukan Gorge cave in Western Australia has demonstrated.

Any short-term socio-economic benefit derived from this project would result in a long-term loss for numerous other industries and small businesses in the area, including agriculture and tourism on which local Aboriginal communities and small business operators heavily rely as often their only source of income. The area already suffers from a struggling low-income population, and concentrating any financial gain in the hands of the few over many would cause further social gaps, inequities, and divisions. Furthermore, the coal seam gas industry affects people's mental and physical well-being, as a 2014 CSIRO survey found: only 6% of local people living in Queensland gas field areas thought the industry had improved their lives, while 42% said that they were "not coping" or "only just coping".

The area in question is particularly vulnerable as it has already been exposed to decades of cotton-farming chemicals poisoning the local waterways. Actually, I am surprised that even an idea for such a project should exist as the area has been listed as environmentally protected for many years. The project would irreversibly destroy this region and its people, and have much broader repercussions for the entire south-east Australia which sits on the Great Artesian Basin. The interconnectedness of the vast waterways in the region means that whatever happens in one waterway will immediately affect all others, and that is a good portion of New South Wales and Queensland. (This is evidenced by periodic floods and droughts that occur regularly in the region.) Do we want another lifeless desert intersected with pipelines instead of an ecologically protected zone? One can do without extra profit but one cannot do without clean drinking water.

I am also concerned that—if approved—the project would set a precedent for any similar future projects in other areas. Although I am a naturalised Australian citizen, it pains me to know that Australian resources are exported to foreign multinational companies who do not care about the destruction they leave behind at the expense of the Australian environment, population, and incredible biodiversity. Australia - with the abundance of its resources and great natural beauty - is a rich country and in a unique geographical position to preserve its natural, environmental and cultural assets. Let us keep it that way for the generations to come.

I hope that you will take the above into consideration.

Kind regards,

Leonarda Kovacic

Sent: Thursday, 6 August 2020 2:09 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

35 threatened species rely on the Pilliga for survival—including the endemic Pilliga Mouse, Squirrel Glider and Black-striped Wallaby. It also forms part of a stronghold for threatened woodland birds including the Glossy Black Cockatoo.

Aboriginal heritage is not adequately assessed and consent has not been obtained. The approach taken by Santos to site its facilities with the intention of avoiding “areas of high cultural heritage value to local Aboriginal groups” fails to understand the landscape scale connection to Country and the holistic responsibility as protectors of Country that is intrinsic to Gamilaraay culture.

Infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

The Assessment Report concludes the project would not “adversely affect groundwater” however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Melanie Mathiesen

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

The Pilliga forest in North West New South Wales is, I believe, an extremely important part of the natural environment of the State in which I live and I urge you to reject Santos' proposed Narrabri gasfield there for the following reasons.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down our gas or electricity prices!

Yours sincerely,

Stephen Spencer

Wollongong, New South Wales, 2500, Australia

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for the Gamileroi people of this land.

- As usual, Government is interested in the quick dollar and forgetting the long time benefits of agriculture!

Gas for 30 years OR

Agriculture for THOUSANDS of years!

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Yours sincerely,

Louise Deans,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Here are better directions investors and government might consider taking instead.

Helping Australian farmers and miners establish regenerative farming practices and hemp farms to establish plant to product farming and reduce the costs of fertilizer and pesticides associated with current agricultural practices.

Investors and government might consider investing in renewable energy in the local communities and public housing.

Energy creation in the local area through a range of sustainable efficient energy options such as biodigestors, solar, wind, pumped hydro, etc.

Winding down fossil fuels and investing in jobs in the local areas and Australian farming and mining companies by creating food, energy and micro industry (micro factories) in the local community could play a vital part of future economic plans.

I hope you will have a look at some of these ideas and seriously consider investing taxpayer funded resources and dollars into supporting Australian owned farms, mines and local areas into planting industrial hemp and developing a plant to product processing (biofuel, 3D Filament and 3D printer (microfactory) mirreco houses).

Given that we are one of the sunniest places on the planet, we now have an unprecedented opportunity to take advantage of this free natural resource. All it takes us a change in mindset and valuing what matters most Clean air, water and environment. These are essential to our survival and our current energy choices are not reflecting their importance.

If investors changed direction and government provided resources (defence forces, experts in the field under employed) to introduce sustainable energy sources Biodigestors, composters, solar and wind generators. and water efficient practices to Australian owned farms and mining operations and suburban areas. It would help people in all areas get back on their feet and reduce operating expenses.

Our current agricultural practices could do with a rethink. Industrial Hemp is a truly versatile textile which has been used to produce and fuel an airplane stronger then steel, build houses, paper, clothes, 3D filament, a superconductor better than graphene and the seed is highly nutritious. 5 to 10 Macadamia nuts a day are good for the heart. Chia and linseed are protein and nutrient rich.

Using regenerative farming practices reduces, water, fertilizer and pest control expense. We should be supplying our defence force and under employed resources to Australian owned farmers and mining operations to help them to change to regenerative farming practices and encouraging nutrient dense, water efficient multifunction plants (eg Hemp over cotton, maccas over almonds, chia and linseed over rice). Our defence force should be assisting in defence of our food.

Netherlands is the second biggest exporter of food in the world after the US , even though they are one of the smallest nations. This is because they grow everything in green houses which conserve nutrients, water and reduce pests. Solar powered

Hydroponic, aquaponic, vertical superfood production systems should be provided by the government to all Australian owned farm, mining operations and in suburbs. This is where I want my taxpayer dollars to go, what about you?

Check out The BZE million jobs plan launched on Monday (same day one of the largest frackers in the US filed for bankruptcy).

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. This company is known for its total non-commitment to our Australian vital resources.

Please consider Australians, not this environmentally damaging company.

The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. Our food and water are of greatest importance

Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Water is our most precious resource, and without clean water we couldn't exist.

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Please use common sense to reduce greenhouse gases and to protect our valuable water supply. It's a no-brainer!

And it won't even bring down gas or electricity prices for Aussies - just more profits for Santos!

Yours sincerely,

Nancy Parker

To: IPCN Enquiries Mailbox
Subject: Submission: Objection to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. Apart from some of the better known reasons mentioned below, I have been following this industry for more than a decade. In the USA there are many instances of gas release and underground water pollution, especially in Pennsylvania I recall. To proceed with such a project when the World is urgently needing to curb levels of CO2 and Methane in the atmosphere is ecologically negligent. Also:

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Subject: My objection to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.;

- 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values;

- the Great Artesian Basin is already threatened by drought and unregulated irrigation. This will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, further endangering the Basin as well as the Gunnedah Oxley Basin and local aquifers;

- Close to 1 million tonnes of greenhouse gas emission will be added to our current and excessive gas emissions when we need to and are attempting to work to reducing emissions by more than 7 million tonnes a year; and

- our gas and electricity prices won't be reduced!

Sincerely,

Linda Shaw

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I write to you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. I do so for a number of reasons: The area is important for Gomeri people, for biodiversity and water resources.

Our farmers need water to grow our food and in a land where droughts come too often it would be criminal to do anything to threaten our water supply.

We cannot risk damage to the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

So I ask that you reject this proposed gas field near Narrabri. Thank you for the opportunity to express my concern.

From: Sue Whare <campaigns@good.do>
Sent: Thursday, 6 August 2020 3:03 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The area is uniquely important for Gomeroi people, their culture and beliefs. Biodiversity and water resources will be severely compromised by this project.

Building the infrastructure for the 850 CSG wells will destroy the natural vegetation, affect the biological balance and create pollution.

The devastating fires of last summer have already caused insurmountable damage to our environment, flora and fauna. Australia cannot afford to cause any more damage to its natural heritage.

The resultant by products of toxic salts are risking the Great Australian Artesian Basin as well as the Gunnedah Oxley Basin and local aquifers. The water required is utterly excessive and will affect any local agriculture.

There is no way in the world that Australia would reduce its emission rate in keeping with the Paris agreement. We are hoping to reduce our emissions by 7 million tonnes and year and this project alone will ADD almost 1 million tonnes every year.

And top of this, the price of gas and electricity for Australians is most unlikely to become cheaper.

I urge you, again, please do not allow this project to go ahead.

Yours sincerely,

Sue Whare

Sent: Thursday, 6 August 2020 3:10 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As an Australian NSW citizen, I CARE about stopping preventable catastrophes so future generations won't suffer the consequences.

Out of interest and concern, i went to an information weekend in the Pilliga to see the situation for myself. I went. I saw. I was alarmed. I felt the arrogance and deception of a foreign company who throw peanuts at the locals as a sweetener. i saw just one of the burning flares which have been belching methane into the environment for years - in the name of exploration - and with naked flame blowing close to the trees of the Pilliga forest. I saw the runoff from an overflowing pond which had killed some very tough vegetation and insects. Accidents often go unreported, self - monitoring seems to be the norm and low fines offer no deterrent to flout the rules. i felt the magic of the local aboriginal heritage and living culture. I enjoyed the diverse beauty of the landscape and wondered how the dry creekbeds with surrounding scrublands would survive with the water table lowered and poisons added.

This dangerous unnatural method of extracting gas -CSG - is not acceptable. The inevitable damage cannot be undone and it will have far- reaching detrimental effects for the farmers and the produce they send to the cities..

So much is unknown about our precious Great Artesian Basin, so we need to trat it with care and the utmost respect

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest which will destroy a priceless natural asset in order to line the pockets of a few wealthy investors.

- The Pilliga is uniquely important for biodiversity and water resources and for the good of the Australian people generally.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Bill Hardy

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

We do not need this gas - we are in a climate emergency and, as his Honour Chief Judge of the Land & Environment Court of NSW notes, EVERY source is a source of climate change - we MUST NOT burn this gas for fuel. The time is passed for this technology - when will we realise that, no, there actually CAN'T be "just one more" (and what a whopper "just one more" this project would be..!). Lastly, we cannot risk the Great Artesian Basin - this is an untested, extremely dangerous technology that must not put our national water supplies at risk. In short, the Narrabri CSG project is madness. You know it, we know it, and it is only you that can, I respectfully note, be the ones to actually prevent it. You must have courage. Thousands in the community are with you for a NO.

Thank you

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies! CSG is environmentally disastrous. We are the driest continent on earth, LNP have compromised our river systems; now they want to destroy our Great Artesian Basin. Say NO to this dangerous practise anywhere in Australia.

Yours sincerely,

Gary Daws

Subject: Submission: I really object to the Narrabri gas project

Dear Commissioners,

I respectfully ask that you reject any proposed Narrabri gasfield in the Pilliga forest or any areas impacting the Great Artesian Basin.

- Santos "suggests" that it will benefit locals. I have seen first hand how much the locals benefited with the Santos development at Fairview. Injune - the nearest town - businesses didn't see a cent.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Prime farmland is what it is - "Prime Farm Land" we cannot destroy valuable ground water for short term gain. Does this pass the "pub test" - will it make a difference in 50 or 100 years time? Yes it will - in a bad way.

- Australia has a Royal Commission running at the moment - the first one that is "really acknowledging" climate change. Australia is getting dryer, weather events are getting more extreme and here we are debating how much worse we should make it.....!

- Time to pull our heads in and reflect on what is happening.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Subject: Addition to my submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to add a footnote to my submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My additional comments refer to the international reputation of the Pilliga woodlands as a haven for birds.

I am reading a book that has been widely publicised and glowingly reviewed: *The Bird Way* by Jennifer Ackerman; Scribe Publications, 2020. Ackerman is one of the most acclaimed science writers in the US (her previous book, *The Genius of Birds*, was a bestseller). On page 28 of *The Bird Way*, she describes the dawn chorus in the Pilliga woodlands, which she notes is the largest surviving remnant of native forest on the western slopes of the Great Dividing Range. The prominence given to this location in a book about birds worldwide, demonstrates its special qualities and the need to protect it from the short-term, ill-conceived, uninsurable and destructive coal seam gas project at Narrabri.

Yours Sincerely,

Elizabeth Cameron

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I am a parent and grandmother from NSW who is concerned about the future my family will be a part of. We must not destroy more natural forest habitat like the Pilliga for the sake of acquiring yet more fossil fuels. My husband and I have travelled extensively around Narrabri, and do not want to see this forest area compromised by this dangerous gas project. It is totally unacceptable and lethal for both the environment and our future climate. The world climate has already changed - serious action should have been taken 20 years ago!! Nature is sending us a clear message in 2020 - raging bushfires, floods, coral bleaching, destruction of important ocean kelp beds, unprecedented melting ice caps and glaciers - all made worse day by day, by relentless use of fossil fuels. It MUST STOP NOW.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours sincerely,
Margaret Thompson

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Unless the CEO's and board members of your company are willing to be held 100% personally accountable for the potential loss of biodiversity, poisoning of the aquifer or issues with water supply to farmers or aboriginal peoples, this project should not go ahead. I would be highly sceptical of any of these persons actually willing to place trust in this enterprise not causing environmental damage and be willing and able to pay damages to Australians effected.

As you must be aware Australia has an ample supply of petroleum gas but simply pays excess prices, from 'cleaner' sources, because of poor policies and agreements.

Australia is a dry continent, with unprecedented fires expected to increase with progressive climate change. Produced as a result of emissions from projects like yours. Given this, I believe it is both reprehensible and unAustralian to consider a project that will both increase greenhouse gases and put Australia's water supply at risk for profit sake. It is time for your company to reconsider your Victorian era objectives and move into this century.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

- We need to be investing in renewable energy if we are to have a secure economic future.

Yours sincerely,

Binnie O'Dywer

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As John Williamson wrote in 'true blue'

.....if they sell us out like sponge cakes...do you really care?

After all the considered research and thousands of submissions detailing the negative effects of coal seam gas mining .My question is...do you actually care?

It is very easy for rural people to become cynical when we are given the opportunity to voice our concerns,only for those real concerns to be swept aside for political agendas.

There is no gas shortage

There is no gas crisis

There are not enough long term jobs to make a difference to our region.

There is no solution to the hundreds of thousands of tonnes of salt brought to the surface in the mining process.

There is no rehabilitation once a site is damaged.

Santos are only interested in shareholder profits and not in our welfare or future prosperity.

Our future hinges on the strength of the Ag sector,not the promises from governments or mining companies.

We know how this is going to go.

Farmers never win when government has to choose sides between agriculture v mining.It is so dispiriting to see our elected representatives fall over themselves to satisfy the short term profits of a LARGE,FOREIGN OWNED COMPANY like Santos.

Do you actually care enough?

Please say no to this project.

To: IPCN Enquiries Mailbox
Subject: Submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

Sheila Addison,
2774

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

I believe that going forward with this Narrabri gas project is not only detrimental to the environment but will effect cultural beliefs and practices for Gomeroi people and will only lead to deviation of waterways. I a Wiradjuri woman stand against this capitalist scheme.

Yours sincerely,

Cyrena Harris

Sent: Thursday, 6 August 2020 10:04 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am a farmer in the Narrabri Shire and I object to the Narrabri Gas Project.

I also urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

As a farmer and Cattle producer I understand how vital groundwater is to farm viability

This CSG project will put groundwater at risk of contamination and depletion. This damage could be irreversible

No matter what Santos says about this project, it will not be viable unless they are allowed to frack the Wells and expand their operation to cover large areas of the State. This has already happened in Queensland.

This is why this initial approval needs to be rejected

- The Pilliga is uniquely important for Gomerioi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Our future is in renewable energy.

Coal Seam Gas is not a transition fuel. It will do irreversible environmental damage which will take decades to clean up.

- And it won't even bring down gas or electricity prices for Aussies!

Narrabri IPC Address:

Firstly I sincerely want to acknowledge and thank the traditional custodians of this land at Narrabri and beyond.

The Kamilaroi Nation for supporting this stand, against Coal seam gas extraction, on Country.

I believe today, I represent approximately 10 million Australians who work and try their very best, to support their families and leave a legacy for our children, we can all be proud of.

The first significant matter of concern:

I spoke at a meeting in approximately 2007 at Singleton, addressing the extension of Warkworth Mine. With all sincerity, appealing to the Ministers, 'that if this mine was to proceed, that all land owners, within the vicinity of the mine, would have their homes and equity protected.'

This is an extract of the Ministers Determination of Warkworth mine.

How does this impact Narrabri , Liverpool Plains and Beyond. In Every Way. Life long endeavours and family homes seriously affected by devaluation. When the water is polluted or disappears they become worthless. Australians don't want empathy, they want and deserve, Justice with laws that protect them.

My 2nd matter of concern:

History:

There has been a potential Pandemic in Australia, much worse than Covid 19 for almost now 150 years. This infection started quite small and for the best part was well managed and actually added some financial viability to the communities it started within. First, showing itself, in NSW and Victoria. It spread substantially, to other states over time. It took other forms at Mt Isa, Kalgoorlie, Queenstown, The Kimberlies, even off shore. The infection started to take a much more visual, and environmentally unsustainable nature, now impacting larger communities and habitats.

The problem then arose, where Queensland Government, appeared to be being making substantial financial rewards from trying to control this infection. However, they did not divulge, the true negative impacts, it was having on farming land, water ways, aquifers natural habitats, tourism, public health and every living creature's, wellbeing.

This caused the infection to start to spread like the recent wildfires because of, other short sighted State Governments, particularly WA and NSW and then the Federal Government. In the last fifteen years it has become a Pandemic of epic proportions. It developed many different forms or mutations, from the original, small, relatively harmless infection. Spreading like cancer across, all of Rural Australia.

Importantly, initially the infection was discovered by Australians, and effectively managed by Australians, for Australians. However, this Pandemic has become exceptionally more dangerous. Its origins, mutations and effective ownership are now of a substantially foreign nature. This has spread offering little support to the Australian economy, when in comparison to the ill gain made by these foreign entities, at Australia's degradation.

Wollar, neighbor to Bylong Valley, use to be a thriving community of over 300 residents and supported a much broader rural community, that is now effectively been almost exterminated. There are no children left to attend the School. That is why the flags are at half mast.

Please don't allow this to keep happening to RURAL Australia any longer.

This Pandemic's common name is known as The Extractive Mining Industry. The biggest infections of rural land and offshore have been mostly dominated and spread by the carbon based Coal, Oil and CSG industries.

Santos's Narrabri gas fields are carbon based which makes it even worse. This industry has already caused catastrophic ecological disasters and is unpredictable.

There is a viable alternative to fossil fuel. It was put on hold for years, on the back burners, powered by the still, very powerful and influential Gas Coal Oil Lobby and Industry and their Political Mates.

This viable alternative is Hydrogen Power. Coupled with renewable solar and wind, when in full production, it has the capacity to almost completely replace the fossil fuel industry.

It has a real capacity to offer long term direct and indirect employment in an Industry destined to grow enormously in the future.

The IPC got it right for Bylong.

Please be part of the Global solution.

Please get it right for Narrabri, the Liverpool Plains and beyond.

Please reject this Santos CSG project, for the future of all Australians and effectively the rest of the world for generations to come. Thankyou.

Part of the exceptionally beautiful Goulbourne River Valley in drought. Mostly owned by Peabody Coal. Neighbours to Bylong Valley.

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I have lived in Coonabarabran and have many friends in the area still, including those who work in the Pilliga in a number of capacities.

The Pilliga is such an important natural asset, it is of irreplaceable value for biodiversity, for water and of course of great significance to the Kamilaroi people. With so much of our forests having burnt last year, we must do everything within our power to protect and enhance the biodiversity assets we still have.

'Developing' this unique natural area with gas wells, roads, drill holes etc will cause irreparable damage to the area, while also recklessly contributing to Australia's greenhouse emissions and destroying aquifers. It is highly questionable what possible benefits may come from it in terms of employment or other benefits to the local communities, it is rather more likely to impact them negatively with damaged groundwater impacting on agriculture, with negative flow on effects for the rural economy.

Please do not allow this ridiculous scheme to go ahead.

Yours sincerely and with thanks

To: IPCN Enquiries Mailbox
Subject: Submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

Below has been generated by someone else but I have read it and agree with all points. I understand it is difficult to look past the money that can be created from this project but implore you to consider that no amount of money will be able to replace what is lost to this project. Unlike short term profits, the animals and environment destroyed by this project are not replaceable, and will be lost for a small (when compared to global output) amount of gas which will go to further pollute Australia and further weigh down Australia's shift to clean energy.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

Matt Pye,
2260

This is simply insane, please stop companies such as this from raping our land and poisoning our water.

It affects us all ultimately

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Yours sincerely,

Val Rogan

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

- There are a great many towns and properties depend on the Artesian Basin for their water, it would be dreadful if this gift was taken away from them.

Yours sincerely,

JOHN GILLAN

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Studies have shown that the estimated cost of gas production will be considerably higher than current gas prices, giving a lie to the argument that this development will reduce East Coast gas prices.

This proposed gas field is the very last type of development that Australia needs in an era of rapidly falling renewable energy costs and increases in renewable technology.

Yours sincerely,

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Have spent time in this area since the mid 1980's and having friends who live on the edge of the Pilliga forests approx. 15 Km's south of Narrabri who 100% rely on a shallow bore for water supply I find it appalling that this water supply could be put at risk.

Along with the devastating damage to the cypress pine forests that will result from the construction of the gas wells and associated infrastructure. Loss of native habitat, loss of trees results in pressure on native wildlife. The Pilliga is a natural wonder, especially during the spring time flush of native wild flowers through the forest, the change in forest trees, pines, hardwoods that change through the different soil types in the area. Considering this Cypress forest once extended from around the Wagga Wagga area all the way through to the Narrabri area this is a last stand of this forest type it should be protected and cherished.

The natural environmental assets and appropriate farm practices can be sustainable forever and used as a tourist attraction to support the local economy. Mining is a short term economy, destructive and only lines the pockets of multi-nationals who will one day move on leaving destruction in their wake.

I urge those with the power to approve this project to reject it outright as the risks are too great. Coal seam gas extraction should be stopped permanently Australia wide. Gas companies should only be allowed to undertake conventional deep well gas extraction as is done in Bass Strait or the North West shelf off WA which is less damaging to the environment, less of a risk to prime farming land. Or better still invest in sustainable energy production, solar or hydrogen.

Please help make Australia a leader in sustainable energy production by rejecting this proposal and pushing private industry into investing/researching a new energy future. We as a country need to move forward and not be stuck in a 19th century energy world.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomerioi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Yours sincerely,

Maria Skilton

- And it won't even bring down gas or electricity prices for Aussies!

Coal gas is polluting and environmentally dangerous to farming, ground and habitats. It is also totally unnecessary as we can produce truly clean, safe and renewable energies cost effectively. Act now for a safe and healthy future and refuse coal seam gas production completely.

Sincerely,

Meredith Luke

- And it won't even bring down gas or electricity prices for Aussies!

I do not understand why we continue to even give a passing thought towards the approval of such outdated and destructive energy sources and the means of obtaining those resources. Amongst other horrors, it really is messing on our own doorstep (and everyone else's while we're at it) in a huge way. Should not those in power be concentrating all their efforts, and support, towards the production of clean energy and nothing else? Yes.

I dearly hope that this project does not gain approval.

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

It is totally nonsensical to put the Great Artesian Basin at risk in this, the driest continent on earth. There is no doubt that if this project goes ahead it will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year. The Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers are important for the very existence of our food producing districts.

The Pilliga is important for Gomeroi people, for their culture, dreaming and water.

The area will be damaged irreparably with if 850 coal seam gas wells and the infrastructure needed to drive this industry go ahead

This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

I understand that there will be Government subsidies to encourage this destructive project. It is just unbelievable that our Governments should be even considering giving this approval

PLEASE. PLEASE. PLEASE.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

William Zappa

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

The Chief Scientist and the Expert Water Panel have both indicated that this project cannot achieve Santos goals and maintain the sustainability of existing businesses/ farms.

The recent drought highlighted we must ensure our food chain is secure.

There are too many risks associated with the Santos gas field project in the Pilliga forest. Please stop it to ensure the future of existing farms.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

You CANNOT allow Santos to wreck the Gomeroi tribal lands with gas pipes and toxic salts that will come up. Farmers are anxious and angry about coal seam gas exploration due to Santos's water theft. We need water for irrigation of agriculture...who will pay for the water they take?

Our farming land will be ruined irreversibly by 850 gas wells. Protests across Australian cities have shown that people care about the land. Santos has no priority to wreak havoc when we know that ecological damage and agricultural damage is the result

Coal seam gas will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Australians don't want further emissions added to an already-poor Government performance.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- Fracking poses a high risk of mobilising radioactive isotopes and in a recharge zone for the GAB this risks ALL GAB water users. This risk far outweighs and short term benefit that shareholders may get from Santos completing the project.

- So far the CSG industry has demonstrated it ignores environmental conditions that it agrees too and is happy to create long term environmental damage for short term gain and yet it is still unviable with Santos righting off billions of dollars due to this project. What guarantee is there that they will clean up their mess? none.

This is a bad project that should have been ruled out years ago.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I ask you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I went to the Pilliga some years ago and personally did some checking with locals . I visited one of the gas wells and the proposed site for the water treatment works.

Over 850 off these wells, and connecting roads and pipelines and power lines will severely impact on the biodiversity of the region. I am aware of the once strong koala population in the region and its steep decline over the years. I am told that a colony still exists .

Why would anyone risk both Australia's underground aquifer (on probably the driest continent on earth at a time of changing climate) as well as our iconic koala that recent Government Inquiries have shown may well go extinct by 2050 if actions aren't taken.

I have seen personally many birds amongst the shrubs and as a former wildfire carer am appalled to think that we seem not to have learnt from past mistakes.

The Pilliga is uniquely important for Gomeroi people and the natural and cultural heritage it contains .

Many locals spoke to me about their concerns on risking groundwater water from the Great Artesian Basin, the treatment of salts,

and the toxins used in the process.

I am informed that the proposal will draw 1.5GL of water and more than 13,000 tonnes of toxic salts every year.

I am aware of the immediate effects of methane being released and that Santos will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions.

Shouldn't we bring down emissions , planting trees not increasing them and clearing land ?

Would not Australia be better off transitioning into renewable energies

Yours sincerely,

Mark Selmes

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I paste below a copy of the dangers of

Fracking

Credit: Sandra Steingraber, a professor of environmental studies and sciences at Ithaca College New York

Simon Fraser University.

Fracking has revolutionized the extraction of oil and gas in just a few years, but this highly efficient method comes with environmental and health risks. Now, a new metastudy details its adverse effects on the local environment, the climate and human health.

The new report, published by Physicians for Social Responsibility and Concerned Health Professionals of New York, brings together the findings of more 1,700 studies, articles and reports tying fracking activities to a host of health problems including birth defects, cancer and asthma.

Related: Fracking is on the rise in Pennsylvania. So are radon levels. Are the two connected?

It's the sixth edition of a report originally published in 2014, which helped inform New York State's decision to ban fracking. A group of public health professionals that included Sandra Steingraber, a professor of environmental studies and sciences at Ithaca College, had wanted to make sure sound science was part of that decision.

"So, we went to work, translating the science into plain English for our political leaders, members of the press and, most importantly, people in frontline communities who are going to be compelled to endure the risks that fracking brings to people's health," Steingraber says.

Related: In Argentina, enormous fracking potential and opposition to match

“When we first did this, we didn't call it a compendium, we called it a memo,” she says, “because there were only nine studies in the peer-reviewed literature. When we finally banned fracking in New York in December 2014, we had an edition of the compendium with 400 studies. At that point, people all over the world were ... thinking about fracking — whether to allow it or not — so our compendium was in great demand. So we've kept going with it.”

Fracking (or, hydraulic fracturing) works by forcing water, sand and chemicals into shale rock at high pressures, allowing fossil fuel companies to extract oil and gas that can't be reached with conventional wells. The study examined fracking's effect on a wide range of parameters, including air pollution, water pollution, radioactivity, social disruption and climate change.

"Across all these data we saw a plethora of recurring problems and harms, and we uncovered no regulatory framework that could avert these harms. In other words, there's no evidence that fracking can operate without threatening public health directly or without imperiling climate stability, on which public health, of course, depends."

Sandra Steingraber, professor of environmental studies and sciences, Ithaca College, New York

“Across all these data we saw a plethora of recurring problems and harms, and we uncovered no regulatory framework that could avert these harms,” Steingraber says. “In other words, there's no evidence that fracking can operate without threatening public health directly or without imperiling climate stability, on which public health, of course, depends.”

Air pollution is an ever-present by-product of fracking, including methane, which is a powerful greenhouse gas, and ground-level ozone, which Steingraber calls “a killer.”

Science clearly shows that ground-level ozone contributes to stroke risk, premature birth, heart attack and asthma, among other things, she explains. When her research group looked at public health effects measured directly, they saw them occurring at higher than normal rates in places with a lot of fracking activity.

The most troubling of these, Steingraber says, is the effect on pregnant women who live near drilling and fracking operations. These women are at higher risk for poor birth outcomes, including premature birth, certain kinds of birth defects and small-for-date births — infants born small for the number of months of pregnancy.

Water contamination is also a proven result of fracking, Steingraber says. Fracking uses fresh drinking water sources to shatter the shale underground, releasing the bubbles of methane — natural gas — and oil trapped inside the rock. “When that water comes back up again, it's contaminated not only with toxic fracking chemicals that were added in the first place, but there is also a whole periodic chart of toxic chemicals down in the shale — things like heavy metals, arsenic, barium, strontium, uranium,” Steingraber explains. “Some of these things, like radium and radon, are actually radioactive.”

This raises the difficult problem of how to dispose of toxic wastewater. Standard practice is to re-inject it into the ground, but this raises the risk of contaminating drinking water aquifers, which the wastewater has to be pushed through. In addition, because lubricating chemicals are added to fracking fluid, the technique can actually lubricate fault lines and trigger earthquakes. Some areas in the United States, such as Oklahoma, have seen a dramatic and unexpected rise in seismic activity, which is likely connected to wastewater disposal. A whole section of the new report is dedicated to the public health and safety risks around increased seismic activity, Steingraber says.

As is commonly the case with extractive industries, there is an environmental justice component to fracking and health impacts.

Fracking infrastructure and fracking well pads are disproportionately sited in communities of color, poor communities and rural communities that can offer the least resistance — communities where people don't necessarily “have friends in Congress” or access to effective legal assistance, Steingraber notes.

Andrew Cullen/Reuters

Climate change is the big theme of the sixth edition of the compendium. Data clearly show that methane is surging in the atmosphere across the globe, a phenomenon that began to rise rapidly in 2007, Steingraber says. Methane is 86 times more powerful over a 20-year time frame than carbon dioxide and “twenty years is about the length of time we have left to really get the climate stabilized and decarbonize.”

“Increasing evidence suggests that North American fracking operations are driving a lot of that surge,” she adds. “And we're discovering that fracking operations and all their attendant infrastructure — the pipelines, the compressor stations, the distribution pipes that bring it into your home — are far more leaky than we formerly appreciated and there are no good fixes for this problem. All of this is quite alarming, showing us that fracking is absolutely incompatible with climate stability.”

Steingraber disputes the notion that natural gas is a so-called bridge fuel to a clean-energy future.

“That's been an industry talking point since the very beginning,” she says. “There was never really a lot of data to suggest that natural gas worked that way, but at this late stage in the climate crisis we know that's absolutely not the case.” One reason the bridge metaphor doesn't really make sense, Steingraber adds, is that “we're already on the other side of the water.”

“We have renewable resources that are deployable now, in the form of solar, wind and water power that can be backed up with battery storage, obviating the need for fracking,” she points out. “So, fracking is no longer a bridge. It might have been a bridge 80 or 90 years ago. Today, it's a wrecking ball that is swinging at our climate.”

I urge you to reject Santos’ proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia’s greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won’t even bring down gas or electricity prices for Aussies!

Sent: Wednesday, 5 August 2020 5:54 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Gas is not a clean energy source. Santos should be investing in renewable energy sources.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

This is not good enough.

Yours sincerely,

Tony Gibson

Sent: Wednesday, 5 August 2020 6:10 PM
To: IPCN Enquiries Mailbox
Subject: Submission:Fracking Poisons Water and Land, I object to the Narrabri gas project

Dear Commissioners,

There is an abundance of scientific evidence available from Australian and worldwide sources that demonstrates the toxic properties of fracking on the environment. From poisoning water tables and underground water systems to contaminating the airways of residents in the vicinity and their lands and soils.

The contaminated slurry has in the past been off loaded to degrade important river systems and the financial benefits few and far between as companies rush from one site to the next, leaving the toxic remainders to be cleaned up usually at cost to the community.

Now we also hear that with the world currently awash with plastic waste much of the "new" product to be derived from the fracking gas will be "more new plastic" that we currently can't seem to find a way to recycle or divert from rubbishing the food sources of the world. World fish stocks and much wildlife are already gorging themselves to an early death by confusing plastic with something actually edible.

Worse still is the contamination of precious water resources for a moment of cash that severely reduces much of the current sustainability of the area for generations to come. It is deliberately poisoning a productive farming area for the shortest of possible gains, and the most short sighted of reasons.

With significant areas of Gomeri Cultural Heritage under threat, and their knowledge of survival through changing climatic times, it is unconscionable to ignore specific area knowledge from tens of thousands of years for a paltry few years fracking ending with an environmental catastrophe and genocide.

And let us not forget that every speck and fume from this process will be adding to the problems of Climate Change and the need to take greater Climate Action. From the Great Barrier Reef to the Artesian Basin all will be touched by this toxic contamination of a sustainable environment. The shorelines by the rising seas, and the rivers and country by the changing rainfalls. And this will not just be a greater impact for Australia alone, no the whole World is dragged into the equation as well. From the rising temperatures to the melting glaciers, some just across the ditch in New Zealand, to the plastic, plastic wastelands of rubbish swirling in the five major ocean gyres, and scattered over the once pristine beaches and shorelines.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am from Moree and the agricultural land around me stands to suffer the impact of permitting this project. I am worried about the fact that we are still suffering from the drought. I am really concerned about the impact on bore water supplies and the risk of contamination through effects on aquifers in the area and the artesian basin. This area is a strong food source for Australia and this should be the emphasis. I do not believe that moneys from taxes of rich mining companies justifies the permitting of this project to go ahead.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

My grave concerns are in relation to the huge underground water aquifer.

There is no iron clad proof that this fracking process will not fracture the aquifer - sorry but you can't repair and put a bandaid on the crack once this has been ruptured.

Have you seen the horrific problems experienced in Queensland and America where these coal seam gas wells are located???

Also why is there not a security deposit of some \$10/billion+ to ensure the local community and traditional owners are offered some recompense if god forgive a major disaster from the fracking occurs.

Wrapping up, I am in full support of coal mining and natural gas processes in moderation. And where local (Australia) should have guaranteed supply before

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

I have visited the area several times on my way to and from volunteer placements on cattle stations as a Volunteer for Isolated Students Education. The proposed coal seam gas wells are a huge risk to the underground water supply in the area for very short term gain and almost no benefit to anyone.

Yours sincerely,

John de Figueiredo

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I live in Dubbo and grew up in the Warrumbungle Mountains' town of Coonabarabran. I object to my local area being turned into a gas-field. I have seen the destruction caused by the Queensland industry and I cannot imagine why any principled government would proceed with such a project.

The Queensland gas industry began with a limited number of wells approved and every year the number increased. Bruce Robertson, an economic expert, has said that an approved Narrabri project of 850 wells could well increase to 10 000 in the decades to come. This is not what I want in my backyard, thank you. It is time to heed the advice of the Scientists from the Climate Council who warn that 2050 is too late to reach zero net emissions to keep temperatures to an average of 2 degrees C. We need to get there by 2040. No more new fossil fuel infrastructure.

Yours sincerely,
Jim McDonald

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

It is a sad but true fact that there is very little time left to save this planet we call home.

If we are to meet our Paris Agreement target of less than 1.5 degrees of global warming, we cannot continue to release carbon into our atmosphere

The proposed Narrabri Gas Project would increase our carbon emissions. Gas is a fossil fuel. This project would create another carbon load we do not need and which we cannot afford.

Fossil fuels must stay in the ground.

Fossil fuel extraction simply has to stop. Now. Forever.

To go ahead with this project is nothing less than a criminal offence.

It is criminal because we know the facts of climate change.

We know we have left it almost too late to reduce our carbon emissions.

To knowingly increase our carbon emissions, thereby endangering the future of all living beings is unforgiveable. It is morally criminal.

It is criminal greed.

There is no excuse for this greed.

I hope you commissioners will allow your personal values and appreciation of our fragile planet influence your decision.

I trust your better selves to do the right thing.

Yours sincerely,
Linda Wilson

To: IPCN Enquiries Mailbox
Subject: Submission: I strongly object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- We know that if we are to keep the world below 2 degrees c of warming due to climate change, we cannot allow ANY new coal, oil or gas projects to go ahead. To develop this project knowing that what's left of our carbon budget is being used up by existing fossil fuel projects is nothing short of self destruction.

- Australia's fossil fuel exports must stop if we are to protect our future. All companies must transition away from developing any new fossil fuel projects, especially one of this size and scale.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- Oil and gas companies are drastically writing down their value and in the wake of COVID-19, financial and energy experts have reported that the coal, oil and gas markets will never recover to pre-pandemic levels. Knowing this, it makes no sense to be expanding gas production that will so badly damage our environment and climate.

- And it won't even bring down gas or electricity prices for Australians!

For the sake of NSW and our planet, please do not allow this dangerous project to go ahead.

Yours sincerely,

Catherine Palese

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is a unique area of fertile farming land. The water used for food production is ground water, it is very well established by science that fracking for gas is an extremely destructive activity. The chemicals pumped into bores under great pressure to extract the gas are extremely toxic and once in the water source render it toxic for farming.

The Great Artesian Basin is the biggest artesian basin on the planet, Australia is the driest continent on the planet, our farmers produce an enormous quantity of very high quality food from this water source! Do not put this in jeopardy!

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Having just endured the worst bush fire season on record, and huge sections of the country still in drought it is incomprehensible that a government would consider sacrificing a permanent ancient reliable water source to frack for gas to turbo charge climate change.

Common sense MUST prevail!!!!!!!

- And it won't even bring down gas or electricity prices for Aussies!

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

The Santos project for a gasfield in the Pilliga Scrub is extremely short sighted and destructive. And I write as a Santos shareholder.

Energy companies have to rethink their modus operandi and find less destructive ways of delivering energy to an energy intensive world. If they can't rethink their business they will surely die as a company.

In addition, for the reasons below, I ask you to support objections for this expansion to go ahead:

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources.
- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.
- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.
- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

To: IPCN Enquiries Mailbox
Subject: Submission: Objection to the Narrabri gas project - please do not approve it to go ahead

Dear Commissioners,

I am so concerned about Santos' proposed Narrabri gasfield in the Pilliga forest because of its potentially devastating impacts on much needed underground water resources. These resources are vital for our farmers and for the surrounding environment.

In addition it will add to our greenhouse gas emissions. Australia has a responsibility to the rest of the world and all of us who inhabit our planet to reduce emissions urgently, not approve further projects which will add to them.

My view is supported by the following points:

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

I urge you to consider environmental sustainability before corporate greed and do the right thing for all our children.

Thank you

Sent: Wednesday, 5 August 2020 6:40 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am alarmed that Santos' proposed Narrabri gasfield in the Pilliga forest will have catastrophic effects on the precious cultural, ecological and water values of this unique area in New South Wales.

It is very important for the health and well being of Indigenous peoples that their land is respected and protected. The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. They are calling for the proposal to be rejected.

This is an invaluable rural agricultural area. Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

The environmental impacts of water use and abuse are completely scary and should be rejected. It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

At this crucial time in the global environment Australia needs to pull its weight in regards to climate change. This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

It is indefensible on top of all the above, that it won't even bring down gas or electricity prices for Aussies! Ironically we have sold all our natural gas for years to come more cheaply to overseas buyers. What does this say to how we value our own community, our own resources, our own environment. Its shameful.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Subject: Submission: I object to the Narrabri gas project

To whom it may concern,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Garry Mathews

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

For all of the reasons listed below and because the risks are just too great, I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

In a dry continent we just cannot afford to lose the millions of years old aquifers, with the amount of water required and the complexity of treating the wastewater components, the risks are too great to ensure the safe treatment and disposal of wastewater.

The wastewater is frequently disposed of by injection into deep wells, typically into saltwater aquifers. The injection of wastewater can cause earthquakes that may cause damage and are large enough to be felt.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. This project will inevitably do so much harm that it should be rejected.

you must be aware that the Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

The 850 coal seam gas wells and the inevitable countless roads, power lines and pipelines must irreparably damage its cultural, ecological and hydrological values.

The work will mean that in a year it will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts. Imagine the risk to the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Horrendously, the gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions. This will not help Australia to meet the need to reduce emissions by more than 7 million tonnes a year.

The history of big projects like this show they often fall way short of the promised economic benefits and on top of that it won't result in lower gas or electricity prices for Australians

Please for Australia its people and its heritage reject this project.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

As a former Registered Nurse with an MA in Sustainability and Climate Policy I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for our biodiversity and safe water resources in a drying climate and to the past and living culture of the First Peoples the Gomeroi.

- Industrialising it with 850 coal seam gas wells, many roads, power lines and pipelines will irreparably damage its ecological, hydrological and cultural values.

- It will extract 1.5GL of water and >13,000 tonnes of toxic salts annually risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and important local aquifers.

- These proposed gasfields will

add ~1 million tonnes annually to Australia's GHG (greenhouse gas emissions) when our clear task is to reduce emissions >7 million tonnes annually.

This without reducing gas or electricity prices for Australian consumers.

Yours sincerely,

Cathy

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project - because the negative consequences are grave and nation-wide

Dear Commissioners,

Please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

For the sake of indigenous custodians of the Pilliga land (the Gomeroi people) and also its unique importance based on our country-wide need for biodiversity and water resources.

Allowing this project to go ahead will mean irreparable damage (cultural, ecological and hydrological) - thinking about 850 coal seam gas wells, countless roads, power lines and pipelines.

Of particular importance - how will the communities thrive if forced to live in a context of removing 1.5GL of water and bringing up more than 13,000 tonnes of toxic salts every year? The Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers are irreplaceable and needed for future generations.

Also - CLIMATE CHANGE: this gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Please consider the evidence provided by scientists and the community and make your recommendations based on what is good for people and the future.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeri people, for biodiversity, and for water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

We must seek energy solutions that do not put at risk our precious and essential water resources, nor harm our increasingly rare native biodiversity in our increasingly few remaining forests and bush reserves. We also must recognise, listen to, and learn from the true custodians of this land--the Gomeri people.

Yours sincerely,

Nikki Boys

Sent: Wednesday, 5 August 2020 7:52 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

What do we need to preserve and protect most in this beautiful country of ours? Well, the answers are fairly obvious: clean air, fresh water for humans, animals and plants (including food), unpolluted agricultural soil, and a swift change away from fossil fuels that are bringing us more bushfires, higher water levels, increased wild weather and the certainty of disaster in the future. Without our basic and vital needs being met, it doesn't matter what governments spruik about "strong economies" - without an environment that's safe to live in, there will be no "economy". What has this to do with gasfields? The answer to that one is simple: gasfields offer the exact opposite of what is needed for our survival. They will create endless problems that may well cause our permanent downfall. As someone about to be a grandmother, I'm scared. So should all thinking Australians be.

I am urging you therefore to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

This project represents short-termism of the worst kind. The preservation of the Pilliga (its people, biodiversity and water) is far more important than the gas industry, which is deservedly dying. The 2019-20 fires and Covid-19 epidemic are clear warnings that massive change is necessary - and the first thing to go must be hydrocarbon production.

When the gas has been long burnt, Australia will regret for ever the choice of preferring profit to the planet.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is the only temporary woodland we have containing many unique plants and animals. I have visited it frequently to birdwatch and observe plants not seen anywhere else. I have been fighting this proposal for many years, as have been many others. We should not destroy this precious woodland so lightly.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Please do not approve this project.

Yours sincerely,

Noela Kirkwood

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. The damage caused by serious salinity problems wherever the water table has been interfered with is well documented.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Barbara Tucker

New South Wales, 2620, Australia

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

Please reject this project.

This is such an important area for the farmers and townspeople who live and work here, and the gas seam wells and all the pipeline development will cause such damage to the infrastructure and production of the area.

There will also be such a massive addition to greenhouse gases to our whole country.

It will have a shocking effect on the Great Artesian Basin and will damage local aquifers.

Please reconsider this proposal.

Yours sincerely,

Sent: Wednesday, 5 August 2020 8:35 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Highly productive farms draw upon the artesian water of the Pilliga to grow their crops. A single farm land on which my fam located just six kilometres downstream of Santos' proposed Narrabri coal seam gas project produces about 70 million potatoes, 1 million kilograms of peanuts, and enough wheat to make 3.5 million loaves of bread - every year.

These farms are dependent upon underground water to grow all that food. Santos' coal seam gas proposal will bring up 1.5GL of underground water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

This level of pollution places at serious risk the future viability of Pilliga farms.

In addition, Santos' proposed gasfield will release nearly 1 million tonnes of greenhouse gas emissions every year at a time when Australia needs to reduce emissions by more than 7 million tonnes a year.

The Commission must block this environmental disaster.

Yours sincerely,

Murray Deakin

From: Kathryn Khamson <campaigns@good.do>
Sent: Wednesday, 5 August 2020 8:36 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

WATER IS LIFE. - Australia is a dry continent with access to water a vital issue for farmers and citizens of the Narrabri district. The proposed Coal Seam Gasfield

will impact water quality and quantity - the Pilliga Sandstone is a crucial southern recharge of the Great Artesian Basin. There have already been 20 leaks and spills from coal seam gas exploration in the Pilliga. Therefore the risks (chemical and salt leakage, accidents and spills) are too great and pose a threat to life in the region.

- The Pilliga is uniquely important for Gomeri people, for biodiversity and water resources. It is crucial that Aboriginal Heritage is preserved, with 90 sites already identified by the Gomeri people. The Santos proposal is risky as detailed surveys of cultural sites will only be carried out AFTER the Gas Project gets approval. This is no guarantee that cultural heritage will be respected in what would become a heavily industrialised landscape.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- other threats include FIRE - flares in the flammable forest environment, and the threat to biodiversity, especially to KOALAS! It is crucial that Koala Habitat be preserved, concerted action is essential to rescue the remaining Koalas in NSW!

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- Is this what we envisage for the future? A damaged environment, loss of biodiversity, the problem of waste disposal, the risk of fires out of control, chemical spills, greenhouse gases impacting our climate in NSW particularly.

- The local farmers are opposed to this project proceeding. The district is the food bowl for our State - vigilance is needed to ensure continuing availability of food production, clean water and reliable water supply for the residents and farmers of Narrabri. This project should not proceed!

- And it won't even bring down gas or electricity prices for Aussies!

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

CSG was wisely stopped from desecrating the Northern Rivers area where I used to live. The same reasons for not allowing Santos to continue to do the same thing in the Pilliga Forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- And it won't even bring down gas or electricity prices for Aussies!

Santos would be doing themselves and Australia a favour if they invested in Wind Turbines or Solar in the Narrabri region instead of a short term, polluting project that will leave a scar on the land, the water and the hearts and farms of the local people.

Sent: Wednesday, 5 August 2020 8:44 PM
To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I appreciate your time to consider this matter and read this submission. I request that you to please reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Food resilience and access to safe water are critical issues for not only our survivorship but also the wealth and health of rural communities.

I understand the need for economic security yet mining activities that jeopardise the operation and potential for so many other livelihoods to exist is not the best way forward to support the citizens of our country in the long term.

I love the land in question, a decade ago spent monthly trips to sample water in the region, it is very beautiful and yet so fragile as so many folk in the region rely on the presence of clean groundwater to survive, grow their food, crops and water animals.

It is often dry country and with the rains bring renewed life, not just to the land and aquifers but the people who inhabit the place. I am concerned for the capacity of our communities to survive this proposed activity.

Yes I understand local councils and revenue from mining is achieved. It is often transient workers and fly in fly out itinerent workers that also profit from such activities. I am concerned for those people who love their home, those who have lived there for generations and created families and community bonds. They loose out significantly. They suffer from activity such as this and then have to endure the long term reminder.

Please make sound decisions with these people in mind, these citizens who contribute to the health of communities, that bring food probably even to your table, those that are bound to the land for more than just economic reasons.

Damage to coal seams-which here we must recall are the key to the health of aquifers and the transit of water- cannot be rebuilt.

If there is no capacity to keep quality clean water resources in our above or below ground systems, there is no capacity for life, no people, economy or future in that vicinity.

Please also ponder what ever happened to the health of pilgrimage sites throughout the globe for which humanity benefited by rejuvenating in the healing waters found in unique areas where water and earths' minerals interact. We collectively have so many ailments resulting from disruptive human behaviour.

Lets support activities that benefit the overall health of ecosystems, environment and our communities.

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Farmers should not have to put up with this type of project in valuable land utilizing water in an unsustainable way.

Yours sincerely,

Wendy Lawson

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

BE HONEST!!! It's time you stopped stuffing your own pockets at the expense of this beautiful country and the hardworking farmers and traditional owners of the land.

Coal seam gas poisons the water, land and air. You only have to look at the USA to see the devastation there, let alone Queensland!

Put your money into renewables! That's what the majority of Australians want!

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

We all know it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Anna Flesselles

Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

I would like to explain why the Pilliga forest, surrounding farmland and water is important for our farmers and their livestock. This proposal places risks to our climate and is unacceptable to me, due to me being a parent and grandparent.

My key objections to the project. is founded on scientific studies, the mountain of evidence from other various nature groups and indigenous elders. Not forgetting the rural studies and other social knowledge of the damages created in the USA. Also historical with verbal information.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission

Sent: Wednesday, 5 August 2020 9:15 PM
To: IPCN Enquiries Mailbox
Subject: I OBJECT to the Narrabri Gas Project

Dear Independent Planning Commission,

You can include my name and submission on your website.

This is a submission on the Narrabri Gas Project.

I object to the proposed Narrabri Gas Project due to its significant environmental, heritage, social and economic impacts.

Living near Wollongong, I seem far removed from North West NSW, however, if this CSG project proceeds, more such mining projects will open up, and this will be detrimental to us all. "Today, water from the Great Artesian Basin sustains the lives of more than 180,000 people and 7,600 enterprises."
(https://nswfarmers.org.au/NSWFA/Posts/The_Farmer/Environment/How_we_can_preserve_our_Great_Artesian_Basin.aspx).

The Assessment Report concludes the project would not "adversely affect groundwater" however Australia is the driest inhabited continent on earth. We cannot afford to gamble with our water. Underground aquifers, like the Great Artesian Basin, support life across inland Australia. CSG drilling is simply not worth the risk and the studies are inadequate to thoroughly confirm there would be no adverse risk to groundwater.

"Santos has used the most basic level of groundwater model because of how little is known about the deep aquifers they will dewater to extract gas."

"The model has been described by the Government's own water agency as having a ❓

❓❓ high level of inaccuracy" 1 and "not able to provide output at the scale and accuracy to assess the project's impacts against the minimal impact considerations of the Aquifer Interference Policy" 2 .

1 DPIE Water "Advice on Supplementary RTS" August 2019.

2 DPIE Water "Advice on EIS" April 2017.

"There have already been more than 20 leaks and spills from coal seam gas exploration activity in the Pilliga. At the headwaters of the ancient groundwater of the Great Artesian Basin, we can't take the risk of chemical or salt leakage, accidents and spills."

(Arsenic lead found in toxic coal seam gas spill

Media Release 9 February 2012).

NSW does not need more gas resources which fuel dangerous climate change, especially now the NSW government has approved a plan to nearly double the capacity of the Port Kembla gas terminal. This project could easily access cheap international gas prices and price Narrabri out of the market. Furthermore, an October 2019 report from Pegasus Economics states solar and wind is developing faster than expected, reducing in cost and already displacing the need for gas-fired electricity.

The Pilliga is the largest temperate woodland in NSW. Santos proposes clearing nearly 1,000ha of the Pilliga, including habitat for the critically endangered Regent honeyeater and for koalas which have already lost 30% of their habitat within NSW in the Black Summer fires. Furthermore, the infrastructure of the Narrabri Gas Project poses a serious bushfire risk due to its highly flammable nature and the Assessment Report does not adequately account for how this risk will be managed.

Due to the above reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The main reason for my objection is that it will have a devastating and disastrous effect on both agriculture and the environment.

- The proposed technology will use a toxic mix of chemicals. These have been proven to cause negative long term effects on people, fauna, agriculture and the environment.

- This massive project is likely to have negative economic impact on the region, with more jobs lost in agriculture than created by the project.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Sent: Wednesday, 5 August 2020 9:21 PM
To: IPCN Enquiries Mailbox
Subject: Objection to the proposed Narrabri gas mine

Dear Commissioners,

I ask you to not allow the Santos proposed Narrabri Garfield to be built in the Pilliga forest.

Apart from being one of the most important things in their living history the for the Gomeri people is essential as a water resource and for biodiversity.

Irreparable damage will be done if the Pilliga is industrialised with the proposed 850 coal seam gas wells, the roads that go with the access, the power lines and pipelines. Additionally damage will inevitably be done to the

ecology, as well as impacting on hydrological and cultural values.

hydrological values. Huge amounts of water and toxic salts will come up close to the surface which puts at risk the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin as well as local aquifers.

Adding almost 1 million tonnes annually to Australia's greenhouse emissions is simply unacceptable given that the goal is to reduce emission by more than 7 million tonnes a year. It is unjustifiable particularly as this appalling project won't even reduce gas prices.

I ask again that you not give the Narrabri gas project the go-ahead.

Yours sincerely,

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Marcus Aydin

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for the local Gomeri people, for biodiversity and water resources. (what about Indigenous rights & health with fly in/fly out workers.., unjust in a Covid world..)

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values. (this will directly end all farming/ agricultural business that feed us all and tourism?..)

- It will suck up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year. (water is life.. a fundamental priority for life including non human life, food crops. On the driest continent in Earth, is a previous resource worthy of no less)

- And it won't even bring down gas or electricity prices for Aussies! (Our sustainable clean future is in renewables. This is bad finite old business thinking)

Yours sincerely,

Dear Commissioners,

As an Australian Citizen, I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Many families and the community have been fighting this proposal for ten long years. And will continue to do so until a permanent protection for the Pilliga region is secured.

This battle is about the things that are priceless: clean air, clean water, and land to grow clean, healthy food

Drilling 850 coal seam gas wells and making a network of countless, inner connecting roads, power lines and pipelines will irreparably damage the land and aquifer on which the farmers in the area rely.

To top it all, this gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Last but not least, it will not even bring down gas or electricity prices for Aussies!

Yours sincerely,

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

Shouldn't our food supply be more important than more gas that we actually don't need if we are all completely honest.

The processes used have the ability to destroy sources of safe clean ground water, damage aquifers and pollute rivers and degrade arable land.

Do we want or need this?

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I am wtheriting to provide reasons for your rejecting Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is important for Gomerioi people, for biodiversity and protection of water resources.

- Drilling of hundreds of coal seam gas wells and the impact of access roads, power lines and pipelines has been shown throughout the world to cause significant damage to local and more distant, affected environments.

- I understand the proposed development will draw 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- Such a development will contribute nearly 1 million tonnes every year to Australia's greenhouse gas emissions, at a time when world attention is on whether or not local and federal governments in Australia will participate actively in ensuring a major reduction in Australia's greenhouse gas production.

Yours sincerely,

Jerome Winston

To: IPCN Enquiries Mailbox
Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources. Sites important to them for maintaining spiritual contact with the land going back thousands of years will be lost forever.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values. These wells will open the way for hundreds more, doing more damage.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers. As yet no viable plan has been put forward to dispose of this hazardous waste.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- Santos claims to make jobs available to locals, but most new workers will be Fly In Fly Out, bringing nothing to the community. Many jobs will be lost in the area as farms fail, the tourist industry is wiped out, and other current jobs are lost. Bringing in Renewable Energy will create many ongoing jobs.

- I have a grandson living in care on a farm near Narrabri -- I do not want his Carers to lose the farm because they lose the water, or the recent droughts are exacerbated by climate change brought on by dirty fossil fuels

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Felicity Cahill

Subject: Submission of Objection: Santos Narrabri Gas Project

Dear Sir/Madam,

I am writing to make a submission on the Narrabri Gas Project.

I am happy for my name and submission to be included on your website.

I object to the proposed Narrabri Gas Project and ask the Independent Planning Commission to reject this project. My concerns are listed below.

Climate impact

If we are to have any hope of keeping global warming below 2°C we must keep gas in the ground.

This gas field will release at least 94.2 million tonnes of potent climate pollution during mining and when the gas is burned for energy, and fugitive methane emissions are likely to be underestimated.

Existing coal and gas fields will push the world past globally agreed temperature goals. There is no room, or need, for more. The rapid development of battery storage technology makes renewable energy sources backed by batteries a cheaper, cleaner option than developing more gas.

New gas production is an unnecessary and dangerous step in Australia's efforts to tackle climate change. Australia is highly vulnerable to climate change impacts like bushfires, drought and extreme heat. More gas extraction increases our exposure to climate risks.

Threatened species

This project will endanger koalas and two rare and iconic bird species - the swift parrot and the regent honeyeater.

The swift parrot is critically endangered. The total swift parrot population is estimated to be no more than 1000 pairs. Habitat loss is a contributing factor in the decline of this species.

The regent honeyeater has become an icon for birdwatchers in NSW. It is a threatened woodland species whose conservation will benefit a large suite of other threatened and declining woodland fauna.

There have been koala sightings in the Pilliga East State Forest. The Western Woodlands Alliance classifies that state forest as a priority area for koala conservation. Koala skulls have been discovered in the project area, further evidence of their presence.

Poison and deplete groundwater

Santos will remove 1.5 gigalitres of water per year by drilling 850 wells through the Pilliga sandstone aquifer (part of the Great Artesian Basin) and into the coal seams beneath.

This removal will depressurise the underground water sources, as well as threaten the recharge of the Great Artesian Basin that they feed.

This project will bring ancient, contaminated coal seam water to the surface.

The water from the coal seams has been in contact with coal for hundreds of thousands of years — perhaps longer — and has absorbed elements that could be harmful if they leak into the irrigation water in the aquifers. Extracted water from the coal seams may contaminate the Great Artesian Basin aquifer. Local communities rely on this supply for water for stock, domestic and irrigation purposes.

No need for more gas

Almost all gas produced in eastern Australia is exported via the LNG terminals at Gladstone. The small amount of expensively produced gas from the project will have negligible impact on domestic prices or supply.

In order to actually protect Australian businesses and households from gas supply shortages, governments should help them to get off gas by promoting electrification, such as heat pumps for hot water, reverse-cycle air conditioning for space heating and induction cooktops.

For these reasons I strongly object to the Narrabri Gas Project. Thank you for the opportunity to comment. I look forward to hearing from you in regards to this submission.

Yours Sincerely,

Rupert Guenther,
6032

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest. Natural resources are single use. Privatising profits while socialising permanent ecological destruction is a monstrous and foolish act.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

Yours sincerely,

Tom Davis

Brunswick, Victoria, 3056, Australia

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

My family has its roots in this region, and I am 100% behind the farmers of the region in protecting the precious resource that is our farming land and its community. I urge you to reconsider the potential intergenerational cost of this activity as follows:

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

- The Pilliga is uniquely important for Gomeroi people, for biodiversity and water resources.

- Industrialising it with 850 coal seam gas wells and countless roads, power lines and pipelines will irreparably damage its cultural, ecological and hydrological values.

- It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers.

- This gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

- And it won't even bring down gas or electricity prices for Aussies!

Yours sincerely,

Emma Kelly

Subject: Submission: I object to the Narrabri gas project

Dear Commissioners,

I urge you to reject Santos' proposed Narrabri gasfield in the Pilliga forest.

I may live in the inner city of Sydney but I know the value of the land from which a lot of my food comes. The era of fossil fuels must end now if our country and planet, and our children, have any future.

The damage a coal seam gasfield makes on the environment is immeasurable. It will bring up 1.5GL of water and more than 13,000 tonnes of toxic salts every year, risking the Great Artesian Basin Southern Recharge, the Gunnedah Oxley Basin and local aquifers, all of which threatens the viability of many primary producers who grow the food that ends up on our plates by robbing them of the underground water which they rely on.

On top of that this gasfield will add nearly 1 million tonnes every year to Australia's greenhouse gas emissions when our task is to reduce emissions by more than 7 million tonnes a year.

It would be recklessly irresponsible for future generations and the planet to consent to this project. Anyone who has a child is morally obligated to protect their future by rejecting this proposal.

Yours sincerely,

Alexa Wyatt
