Submission to the inquiry on the Narrabri CSG project

Macbeth begins to be afraid, and says that he suspects "the equivocation of the fiend / That lies like truth".

I use that quote to express that all substantial arguments must have at least a small content of truth.

I found this reply by Santos particularly poorly written with much ambiguity and no direct answers to my worries and claims in my first submission.

Many of Santos' claims were so different from those of other experts it is hard to believe them; for instance, their claim for the price reduction we as residence of NSW could expect. In regards to the pricing details given, the reductions cannot be taken seriously for they are within the error range of calculation and so may, in fact, end up costing us more.

I was astounded to see the graph of LNG import pricing was drawn by hand.

Unfortunately, it has become common to withhold information on the basis that it was "commercial in confidence".

I would like to see all information tabled and authenticated for this is an important problem with extremely serious consequences.

Long term CSG as a means to transition from coal to sustainable sources. It is a tactic to keep solar and wind as minority suppliers to our energy needs.

This is a very slap-happy reply to a big problem in which little, if anything, is convincing.
