Subject : Kariong Sand and Soil Supplies Facility SSD 8660

Dear Sir/Madam

My Family and I ie My Wife and three sons who are part of the above business fully support the above development for the following reasons.

* The Davis family has been our chief supplier of Composted and Pasteurized Green Organics for nearly 20 years. This material is screened and blended to produce our various soil and potting mixes. The ultimate end of this is that millions of trees and shrubs have been grown in these products. Surely with all the catch phrases like "Renewables" , " Climate Change", " Carbon Capture" and "Bio -Mass" , this facility is probably near the very top of these goals and I am astonished why facilities like this are not better supported or were we doing it before it was trendy

* Over the years I have been to some very good facilities and some very dodgy ones , this one is very close to the top. I thought that Recycling any product has to be better than burying it in the ground, especially environmentally. This is what this facility is about.

* It is situated in an Industrial area , where else do you put it? It is very close to the M1 between Sydney and Newcastle which reduces transport costs and therefore fuel usage.

* How any one could possibly complain about noise from this facility is close on crazy. It is right alongside the busiest road in Australia on a Northbound uphill pull. Trucks make more noise pulling uphill !!. and have engine brakes on when going South bound.

Overall the Davis family are very good people and I am totally sure this facility will be run properly

Regards

Laurie Bowtell [REDACTED]
