

NAD 33	5.62 km	WP 63	VIZ2	Level 2	<p>LVIA description at Appendix E 23 photomontage 21.</p> <p>Views of up to 70 turbines may be possible around the property and on parts of the property along the Head of the Peel Road. Two additional Dwelling Entitlements similarly affected are attached to this property. Refer <b>Section 18.1.1 Crawney Valley Entitlements</b>. The VIZ2 performance objective threshold for multiple wind turbine effects will be exceeded at each of these 3 locations. Some existing screening is adjacent east and south of the dwelling, at least 30 turbines are likely to remain visible at the residence and curtilage. The LVIA Appendix E23 notes that parts of the turbine string will be a dominant feature on the ridgeline. Existing screening will screen some turbines from view however the screen is not continuous and will result in varying visibility from the curtilage of the residence. Supplementary screening can reduce the impacts however will also result in an extensive reduction of the views of the ridgeline to the east and south.</p>
