Topic 1. Sustainability of current and future forestry operations in NSW

I strongly believe and truly want to stop deforestation on our native trees and protected national parks and everything that is native to all states and territories to be protected at all cost, for future generations. And I strongly suggest instead of trees, use industrial hemp, after all its the governments of Australia saying that we have a climate crisis. Industrial Hemp is the solution.....

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

All of Australia's native forests landscape and animals should be priority, we all know there's better solutions that held back by big corporate, this must change.....

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Stop deforestation and I demand that we use industrial hemp, save our environment and ourselves,

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Industrial hemp is the solution, and there is great steps on graphite tech

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Plant more native trees now and stop destroying our environment with wispers of nothing...

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Industrial Hemp would solve a lot, if not close to everything, we can build just about anything out of it. Who in their right mind would not do this if we have a climate crisis.....
