Topic 1. Sustainability of current and future forestry operations in NSW

Do you want the world to be like the dr Seuss book the Lorax?

Trees give us oxygen, shade, they give homes to our native animals,

-Rip rip wood chip turn it into paper, -use other sustainable products try other plants e.g. water hyacinth, bamboo, plant trees that are fast growing, the native trees such as Huon pines take hundreds of years to grow some are a thousand years old,

If you massacre these beautiful trees you are going to destroy a very special habitat,

Why would anyone be so stupid so as to turn a world heritage forest into chip wood which is the most stupid product wood chips held together by glue and when it gets wet it swells and falls apart

How dare anybody who thinks the world is there's it's everybody's world,

We need trees, we need fresh air,

Idiots in politics always wait until the problem is too late then they make radical discussions just to get voted in again for the money and life style

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

It's simple look after to the environment or you won't have one to live in

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Think out the side oval

Recycle And reuse everything you dump in the tip

Or you will be living in a tip and less you are in nasa and flying off to another planet to stuff up

Then good luck with your planning

Seriously we have created playgrounds for children out of recycling etcâ€¦ it's not hard,

We have to rethink everything.

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Stop removing any natural forest and only take from new plantations

Every new house hold should be given

10 trees to plant

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

It's too late for that leave the last remaining natural forests be,

Look at the world as a whole trees in the Amazon etcâ€¦ the Amazon has been eradicated so quickly and holds some of the most incredible and amazing natural plants for use in cancer and disease.

Please see greening Australia's recommendations

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

It's simple leave the native forests alone

Plant more trees
