## Topic 1. Sustainability of current and future forestry operations in NSW

Logging native forests are unsustainable.

---

## Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

These are OUR forests, not National Parks or State Forest entities. We say stop logging!

---

## Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Pass a law that demands all construction, mining transport and retail entities use steel in construction.

---

## Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

Softwood and hardwood plantations should only be allowed on private land.

---

## Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

State Forests should be mandated to manage OUR forests in the best environmental ways possible. even a five year old kid could tell you the environmental and social benefits of managing forests, particularly native forests.

---

## Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Carbon and biodiversity benefits far outweigh the benefits of logging.
