## Topic 1. Sustainability of current and future forestry operations in NSW

Very sustainable, and have been for over 150 years.

---

## Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

They provide a cleaner and more newer groth for animals compared to national parks. They also provide shelter in fires as msnaged forests are less fuel abundant, therefore fires burn cooler in managed forests

---

## Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

2 words: Housing crisis!

---

## Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

They provide a vital roll, however timber quality is questionable when sawmilling.

---

## Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

If ypu take them away, you will immediately see the negative impacts on all fronts.

---

## Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Irrelevant. Climate change is a myth designed by the rich and directed at the dumbest of gullable individuals.
