

6 December 2024

Plasrefine Recycling Pty Ltd  
c/- David Gamble  
Senior Technical Director – Waste Infrastructure  
GHD

via email: [REDACTED]

Dear David,

**Moss Vale Plastics Recycling Facility (SSD-9409987)  
Request for Information**

I refer to the State significant development application for the Moss Vale Plastics Recycling Facility Project (SSD-9409987) (**Application**), currently before the Independent Planning Commission (**Commission**) for determination.

After consideration of the Department's referral materials and the matters raised by the Community during the Public Meeting for the Application, the Commission is seeking a response from the Applicant on the following matters:

1. The Applicant advised the Commission that the Project could effectively operate with nil discharge of process water (Applicant meeting transcript pg. 12). Please provide further information on the proposed process water discharge including whether the proposed 10kl/day is required.
2. Please provide the following in relation to traffic and access matters:
  - a. clarification of the access route and access point for construction vehicles (both heavy and light vehicles) during:
    - i. the earthworks phase of construction; and
    - ii. prior to the north-south access road being constructed, including in the scenario that the relocation of the level crossing and/or the works on Collins Road and Douglas Road are being undertaken simultaneously with earthworks;
  - b. clarification of the maximum number of truck movements proposed per hour during operations; and
  - c. an assessment of the impact of light spill from trucks, specifically when using the north-south access road, on proximal residential receivers.
3. Please provide details of proposed biosecurity measures (i.e. pest and vermin control) to be implemented as part of the development.

4. Noting the Applicant's response on Day 3 of the Public Meeting, please provide a visual representation identifying points in the recycling process, from the unloading of feedstock to the loading of the finished products (either in pellet/flake form or as remanufactured products). The representation must clearly demonstrate where in the process plastic materials are not fully enclosed and/or encapsulated.

The Commission requests that the Applicant provide a response by **5pm, Monday 6 January 2024**.

Should you require any clarification in relation to the above, or wish to discuss further, please contact Kendall Clydsdale at [REDACTED] or at [REDACTED].

Yours sincerely,

**Stephen Barry**  
Planning Director
