Organisation: N/A	Key issues: <i>Social impacts, Visual impacts, design and landscaping, Land use compatibility (surrounding land uses), Traffic, Other issues</i>
Location: New South Wales 2579	
Attachment: N/A	

Submission date: 10/23/2024 4:27:29 PM

*We live in a plastic world, and we need to recycle plastic - safely and sustainably.*

*Plastic recycling plants need to be located at sites where there will be minimum impact to the environment €“ both physical and human.*

*It must be managed safely. By reputable companies with a proven track record of management practice including environmental management.*

*Locating a plastic recycling plant on the doorstep of an ever-growing residential area is an inappropriate land use decision.*

*Pollution, traffic, environmental risks to water, agricultural land, air quality, soil etc etc.*

*This location in Moss Vale is wrong, the science is not settled, risk management is inadequate, infrastructure is not there and health risks, many of which are only now emerging as science better understands the consequences of microplastics in the environment, have been completely ignored.*

*Wingecarribee local area has been without a voice in local government for more than four years. No councillors No council.*

*If we had had representation this development would have not got to this point. The community would have been heard, instead there has been no one listening!*

*We now have representation the community are finally heard and hopefully the right decision will be made.*

*The government should now simply focus on finding a suitable alternative location that is safe for a plastic recycling factory.*
