*The proposed plastic recycling plant in Moss Vale poses significant ecological risks.*

*The plant's operations could lead to increased air pollution from emissions, impacting local air quality and contributing to greenhouse gases. Additionally, runoff from the facility may contaminate nearby waterways, threatening the Wingecarribee River ecosystem and harming aquatic life. Plastic recycling processes often generate microplastics, which could infiltrate soil and water, leading to long-term damage to biodiversity in the region. This project threatens the balance of local ecosystems and poses a risk to Moss Vale's natural heritage.*
