I object to the Moss Vale Plastics Recycling Facility due to the environmental and human health risk posed to the local area. Not only do microplastics pose an airborne health risk to human and environmental health, there is also the risk of floodwaters carrying the toxic waste into the local drinking water catchment due to the proposed facility being located in a flood prone area. The Proposed facility is within a close proximal location to homes, agriculture and school facilities. The approval of the development poses a significant and unnecessary health risk that would likely end up costing more in long term local population health burden than economic gain, and is in direct contradiction of Australia's Strategy for Nature 2024-2030.
