An extremely hazardous development of high environmental risk, and eminent threat to the health and safety of the Southern highlands community, the proposed Plasrefine development cannot be built in the present proposed location.

It is too dangerous and will have long lasting effects on the local environment flora and fauna and would likely contaminate our local waterways that are a lifeline to the Sydney water catchment.

The proposed processing of the plastic makes it into a microscopic dust that becomes electrostatic and therefore sticks to all surfaces. Being of such fine particles means the processed plastic becomes airborne. It has also been proven that Pfas chemicals hitch a ride on the microplastic powder and the elements cannot be separated.

I've been made aware that the microplastics have been shown to pass through a humans blood brain barrier.

A hazardous plant such as this proposed by Plasrefine should never be built near homes, rivers and or any community in Australia.
