I am shocked this is even being considered in such a high density family area, my children go to school in Moss Vale, the idea that during certain weather conditions the proponent suggests the best way to stay safe from toxins and carcinogens from their facility will be to stay indoors is seriously shocking. By their own submission they accept there will be dangerous toxins and carcinogens expelled from the facility in certain conditions that will be dangerous to people in the area. The facility should relocate to an area of NSW that is not highly inhabited and council should be wary of future liability to families and children when health is impacted.
