Proposed development not the right site. This site has no buffer zone from residential area instead on their door step. The local state member has offered the proponent to find a more suitable site it should be a no brainer to accept his offer. My objections to this proposed development are . Water pollution which would end up in the Sydney water system. . Air quality . Environment proposed doors face west where our damaging winds come from. . Truck movements in and out of proposed development through residential street near childcare centre and Gavan Institute. . Additional stress on the community. . Miss match with Biotech focus noise traffic and environmental impacts of a massive recycling plant would create inhospitable environment for sensitive Biotech research and certainly does not fit Council plans for SHIP funded by State government . .Understand proponent has no experience in plastic recycling and should be rejected full stop. Still do not know what chemicals will be used another rejection trigger. Major concern Australia safe limits for cancer linked forever chemicals in drinking water by the National Health and Medical Research Council to slash allowable levels of PFAS, PFOA chemicals. Size and visual impact a 4 storey industrial plant sprawling across 3.24 hectares. Please consider our community welfare and reject this proposed dirty industry on the residence door step.
