*While the need for plastic recycling facilities in NSW is undeniable, the proposed location for this facility is highly unsuitable. It borders areas zoned for "environmental living" and "rural landscape" and is uncomfortably close to established residential neighbourhoods and the Moss Vale township. The risk of microplastic and chemical pollution affecting the surrounding environment and private properties is significant. On windy days, airborne pollutants from the facility could easily spread across the town. Furthermore, the discharge of water containing phthalates poses a long-term threat to the local ecosystem and public health.*

*It is also concerning that the Environmental Impact Statement (EIS) was prepared for the developer, raising questions about its objectivity and reliability. Further independent assessment is essential to accurately evaluate the environmental and community risks posed by this project.*

*I strongly urge you to reconsider the location of this project until all community concerns have been thoroughly addressed and resolved.*
