*Plastic Refinery (largest in Australia by 5 x- melting and shredding plasticsâ€™ semi trailers every 7 minutes, fumes and water run off filled with microplastics into the Wingecarrarie River)*

*- 8 acres of factory. Melting plastic chemicals at 1200 degrees and ethanol based processing liquidsâ€™ a chemical fire that size and 4 rural fire trucks supposed to deal with it.*

*- The access for fire trucks in the size of a double garage. It'll just be left to burn out and experts the other day said much smaller ones took 4 days. Imagine the chemicals over the area for weeks. And all the chemical foam running down the river. Horrifying.*

*- It's 90m from new house projects and 500m from a daycare centre- not to mention opposite the Garvin Medical Research Institute. Madness*

*- 9m semi-trailers every 7 minutes past the schools. Insane*
