I am extremely concerned about the environmental impacts of the proposed plastic recycling plant

1). WATER. A) the escape of microplastics into the natural water flows which ultimately flow into Warragamba Dam, Sydney's major source of drinking water.

2). AIR QUALITY. The prevailing winds from the proposed development blow across Moss Vale , Burradoo and Bowral. I am extremely concerned that nanoparticles of plastic will impact on the natural environment including the water flows , the food cycle , and all residents of the above towns

Could the IPC please look at the water and wind data provided to the IPC by both the Battle for Berrima and the Coal Free Southern Highlands organisations opposing the then proposed coal mine at Berrima . That data clearly showed the negative impact on the water flows and air born contaminants across Moss Vale , Burradoo and Bowral .

B) The huge draw down form the local water storage
