

[REDACTED]

was a quiet road, now not safe to walk anymore.  
Why we are against the school —

- ① The roads not equipped to handle the traffic it's going to cause even further.
- ② Not enough area for parking.
- ③ In a flood zone.
- ④ No sewer, they're thinking of putting a pump-out sewer.

In reality on paper everything works fine, until it rains and floods. The pump-out sewer over flows & raw sewer goes down into the creeks. Bad for the environment. I've been involved in building schools & shopping centres when they have the pump-out system, where the truck that does the pump-out does NOT turn up and the sewer over flows into the streets.  
On paper everything works until it comes to reality.

I am writing to strongly oppose SSD -

This proposal if approved will impact Catherine Fields and its current rural nature

I have family that live near the site and driving past I cannot imagine such a commanding, over bearing building being constructed there.

Catherine Field is a rural suburb and does not have sewer <sup>kerb</sup> gutters, street lights or footpaths like residential areas have.

I feel there has been no thought of safety. The sewer area is too small even after the first stage which will lead to contamination and overflow of effluent

I do know that there are many locals who do not want this to go ahead. I do not know one local who wants this approved.
