Subject: Mangoola Coal Continued Operations Project (SSD 8642) - Additional Material
Date: Monday, 12 April 2021 12:51:32 PM

I have reviewed the additional material. I was please to see that the addition stated
EPA presentation-“Mines have been doing the right thing • Haul roads are wet • Limiting and stopping operations • Operating drilling rigs correctly • Observed blasts have been managed appropriately”

Glencore response – Mangoola is a low gas seam

Transcript- “PM2.5 levels at Liverpool are comparable to the PM2.5 levels at Muswellbrook and this is because of Liverpool”

From what I have read and witnessed myself in the hunter valley the recent return to the normal rain fall has seen a dramatic improvement in the air quality which I believe agrees with the additional information provided what shows the dust and smoko generation to be largely affected by weather and on par with other areas around NSW

There I still strongly support the project the economic benefits it will bring to the local area

Regards,

Clinton North
Operations Manager - Hunter Valley Area
