IPC Public Meeting 7.7.22 Mt Pleasant Optimisation Project

Dr Catherine Chicken

BVSc PhD MANZCVS

DISCLOSURES - SEH CONSULTANT VETERINARIAN

- UHAQAC MEMBER REPRESENTING OTHER INDUSTRIES

I WOULD LIKE TO ACKNOWLEDGE THE WONNARUA PEOPLE WHOSE LAND WE ARE MEETING ON TODAY AND PAY MY RESPECTS TO THEIR ELDERS PAST, PRESENT AND FUTURE.

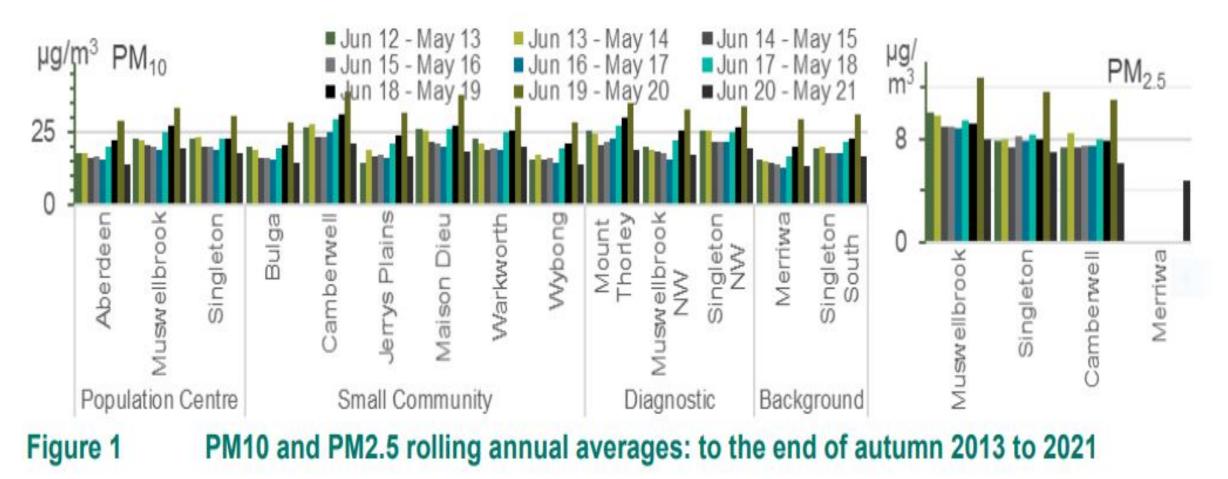

Focused areas of concern

- 1. CUMULATIVE IMPACT OF OPEN CUT MINING
- Air quality
- Visual amenity
- Community health and wellbeing
- Climate change

• 2. SYSTEM FAILURE

Air quality

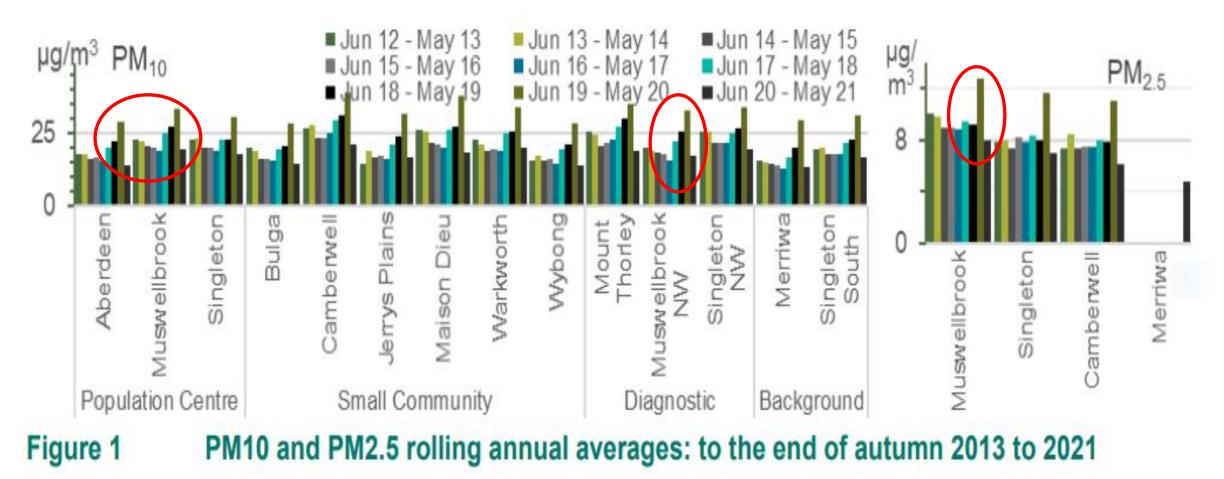

• UHAQMN providing valuable data on air quality in the UH for past 10 years (Feb 2012+)

https://www.environment.nsw.gov.au/

Air quality

• UHAQMN providing valuable data on air quality in the UH for past 9 years

https://www.environment.nsw.gov.au/

Air Quality

Data from the UHAQMN provides the evidence base for AQ issues of the region

PM 2.5 levels from diesel emissions generated by significant off road truck movements and trai activity related to the Mt Pleasant mine proposa are not fully quantified. No PM 2.5 monitor at Aberdeen (or Muswellbrook NW), the populatio centre being encroached upon by this proposal.

Cumulative impacts on the region not considered critically enough in the approval of any new or expanding mining operations

Visual Amenity

Impacts significant for all to see, smell &, at times, taste.

Promoting tourism and UH as a desirable destination to visit already challenging.

UH Shire as yet unadulterated.

 Visual impacts negatively affect investment in surrounding productive property

SYSTEM FAILURE SERVING NO-ONE

Doubling of coal extraction in time of urgently required action on climate change paradoxical

Commitment by all levels of government to effect meaningful change in relation to carbon emissions, yet approvals for increased coal extraction ongoing

BROKEN SYSTEM serving no-one

- Planning is process-driven rather than outcomes focused.
- EPA then responsible for enforcing conditions on all fossil fuel extraction projects
