**Topic 1. Sustainability of current and future forestry operations in NSW**

There's nothing sustainable about it. You can't log state forests and protected land and then plant a plantation and call it equal. It is the quality of these forests, the ecosystems, the wildlife that cannot be replaced!

---

**Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values**

In NSW we have many endangered species living in our forests as well as cultural heritage sites that are being overlooked. These mean more to Australians than one industry and a handful that profit.

---

**Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail**

There are sustainable ways to grow timber and alternatives to hardwood. We should be following the slow fashion approach and slowing down development so people have a choice to buy sustainably grown timber or not.
