Topic 1. Sustainability of current and future forestry operations in NSW

These trees take so long to grow, they do so much to keep our air clean and house so many plants and animals surely we need to protect them against logging.

Topic 2. Environmental and cultural values of forests, including threatened species and Aboriginal cultural heritage values

Being a white person I have only a small idea of the importance of Country to our first nations people. But I know how I would feel if my home was destroyed.

Topic 3. Demand for timber products, particularly as relates to NSW housing, construction, mining, transport and retail

Not sure about this one but there must be other environmentally friendly products available??

Topic 4. The future of softwood and hardwood plantations and the continuation of Private Native Forestry in helping meet timber supply needs

If we keep allowing it..it will simply run out. Be destroyed along with the animals that live in the forests

Topic 5. The role of State Forests in maximising the delivery of a range of environmental, economic and social outcomes and options for diverse management, including Aboriginal forest management models

Surely it is the role of state forests to protect state forests. Would not that be its main responsibility?

Topic 6. Opportunities to realise carbon and biodiversity benefits and support carbon and biodiversity markets, and mitigate and adapt to climate change risks, including the greenhouse gas emission impacts of different uses of forests and assessment of climate change risks to forests

Can't comment on this..but it seems that the panel has a great responsibility and a great opportunity to do some good. I hope you use it.
