Organisation: N/A	Key issues: <i>Social impacts, Visual impacts, design and landscaping, Land use compatibility (surrounding land uses), Traffic</i>
Location: New South Wales 2577	
Attachment: N/A	

Submission date: 11/19/2024 3:29:57 PM

*IWe object to the Plasrefine development on the following grounds:*

*- Traffic*

*- We understand there will be literally hundreds of truck movements per day. These will access the site through settled residential areas, using roads not designed and built for this level of heavy traffic. This will generate high levels of noise and air pollution for these residential areas.*

*- It is not clear how these large trucks will access this final approach route; there will potentially be high levels of traffic from Sydney, Wollongong and Canberra. What route will they take through Moss Vale without causing traffic congestion and disruption to schools and childcare centres?*

*- Fire*

*- These facilities have a history of fire incidents. There are many houses and other businesses which would be directly affected. We live about 1.5 km from the site in a direct line. There is a large community of residents who could be directly affected. It has been pointed out elsewhere that the RFS facilities in Moss Vale would not be able to cope with a fire at this site.*

*- Environment*

*- This company has a history of failing to manage and protect environmental outcomes. There is a high possibility of water contamination, with a high possibility of this feeding into the Sydney water catchment. There is also the matter of emissions during the plastic processing which may affect residential areas, and the companies which already exist close to the proposed site.*

*- Noise*

*- The company is proposing 24 hour working. This will generate noise from the processing operations and the trucks, and as stated elsewhere, there are residential areas within 200 metres of the site. As we have already noted, we are only 1.5 km away and sound travels, especially at night.*

*This is simply the wrong site for this facility. A number of more suitable alternatives have been suggested, and we feel that these should be investigated further.*
