If this [REDACTED] recycling centre (largest in Australia) is built in mossvale our water ways (including drinking water - and that of Sydney too as it feeds into warragamba) will be flooded with hundreds of thousands of tons of microplastics each year. Even the most stringent plants in the uk release this. So will the air be polluted with microplastics which remain in our brains and major organs forever - as it blows directly into our children's school. Our soil and livestock will be be polluted. cancers, dementia and infertility will cluster in the highlands. This is all documented in peer reviewed papers internationally. And Heaven forbid it catches fire (which it will) and floods us with toxic smoke - there are only small two fire stations in Wingecarribee the others are an hour away in good traffic. The recycling plant have suggested we all limit our time outdoors to stay safe' it's the single largest environmental crisis I've ever experienced and beyond comprehension that the state government recommended it for approval. If this thing arrives it will poison the highlands for many generations.
