From what I understand, the processing of used plastics at this proposed site will be treated with chemicals, the make up/ingredients of which cannot/will not be disclosed to the public.

So in effect, the public are expected to support an industrial venture in which key aspects of its operation - and their after effects - are not to be known.

I encourage the submission of other less harmful methods of plastic reproduction/recycling. Perhaps, as an example we could be shredding plastics & compressing them into new useable forms with naturally present gluing agents such as tree saps etc

Adding secret chemicals into the situation seems to be a straight path to disaster and one we as a species are sufficiently equipped to avoid.

Jonathan
