As a family passionate about our local community and its environment we are extremely concerned about this development and would like to see it rejected for the following reasons:

Health and Environment:

The flooding risk of floodwaters carrying plastics / microplastic waste into a major drinking water catchment alone makes this site unsuitable for the proposal.

Microplastics pollute our air and waterways and we will be breathing and drinking them daily should this go ahead. This is not appropriate for this location, it should be in an isolated area with minimal impact to the community and its environment.

We moved to the Highlands to avoid developments like this and for the clean air, water and lifestyle.

Our community is our heart and pulse – please listen and reject this development.

Many thanks for hearing our voices and investigating our concerns.
