The proposed Plastics refining proposal must NOT be built at the proposed Moss Vale site but must instead be located at a site away from homes where there will be NO impact on families health or amenity outcomes.

Scientists tell us about the deleterious effects of pollutants from micro plastics being found in our bodies ingested via our food chain. Recycling plants are well known to catch fire which spews out heavy dangerous smoke which our Fire & Rescue Services would be difficult to manage. The emissions emanating from the proposed site will have lasting health impacts on nearby living families. The proponents cannot guarantee that health impacts will not be impacted.

The proposed site is not amenable to the increase in heavy traffic delivering the material to the plant as can be witnessed by the dreadful state that they are in at present from from current road users. The local Shire Council can hardly manage to cover the roads remediation costs that it is now faced with.

A better solution would be to locate this plant west of Western Sydney as the their roads have been improved in recent times.

I do not see any positive outcomes, jobs or otherwise, from this plant opening in the Southern Highlands and would suggest a complete rethink by all the proponents of the site especially the currant State Government facing an election in the near future.
